PRIZE-SCHEMES:—

Special Report by *Rev. J. P. Norris*, dated January 1857, on *Prize-Schemes* in *Mining* and *Manufacturing Districts* of *Staffordshire* and *Shropshire* - - - - - - - - - 822

APPENDIX.*

ANNUAL GRANTS:— Page

Detailed Statement of *Annual Grants* conditionally payable for *Augmentation* of *Salaries* of *Certificated Schoolmasters* and *Schoolmistresses*; for *Retiring Pensions* to late Teachers of inspected Schools; for *Stipends* of *Assistant Teachers*; and on account of apprenticed *Pupil-teachers* (with Names of Apprentices, Year of Apprenticeship, and Month in which Annual Examination is due) 839

CERTIFICATED TEACHERS:—

Annual Calendar of Teachers who have obtained *Certificates of Merit:*

Schoolmasters - - - - - - - - 989
Schoolmistresses - - - - - - - - 1055

Certificated Schoolmistresses for *Infant Schools* - - - 1097

REGISTERED TEACHERS:—

Annual Calendar of Schoolmasters and Schoolmistresses *registered* for *Capitation Grants* and for *instruction of Pupil-teachers* - - 1098

CLASS LISTS:—

Class List of Students in Normal Colleges and Teachers in Elementary Schools examined before Her Majesty's Inspectors of Schools, at Christmas 1856 (in England and Wales), and in June 1856 (in Scotland), for Certificates of Merit and for Registration - - 1102

EXAMINATION PAPERS:—

Copies of *Examination Papers* used at Easter and Christmas 1856, for—

1. Candidates for *Queen's Scholarships* - - - - 1121
2. *Male Students* in Training Colleges - - - - 1125
3. *Female Students* in Training Colleges - - - - 1155
4. *Teachers*, being Candidates for *Registration*, and for *Infant School Certificates* - - - - - - - 1164
5. Candidates for *Lecturerships* in Training Colleges - - 1168

PLANS OF BUILDINGS:—

Plans (4) of Training College for Roman Catholic Schoolmistresses at Liverpool.

* The Table of Annual Grants, the Calendars of Certificated and Registered Teachers, the specimen copies of Examination Papers, and the Plans of the Liverpool Roman Catholic Training College, appended to this volume, are printed for the information of school-managers, and are not presented to Parliament.

MINUTES

OF THE

COMMITTEE OF COUNCIL ON EDUCATION.

1856-7.

QUEEN'S SCHOLARS AND STUDENTS.

MINUTE, dated 2 June 1856, regulating *admission* of *Queen's Scholars* and *annual examination* of *Students in Training Colleges.*

At the Council Chamber, Whitehall, the 2nd day of June 1856.

BY THE LORDS OF THE COMMITTEE ON EDUCATION, OF HER MAJESTY'S MOST HONORABLE PRIVY COUNCIL.

THEIR Lordships considered—

(1.) The extent of accommodation provided in the several training colleges under inspection.

(2.) The possible number of Queen's scholars (Minutes of 25 July 1850, 20 August 1853, 14 July 1855,) pursuant to the existing regulations.

(3.) The means of inducing a larger number of the pupil-teachers, who annually complete their apprenticeship, to enter the training colleges as Queen's scholars.

There is accommodation in the training colleges under inspection for lodging 1,927 students.* The number of pupil-teachers who will respectively complete their apprenticeships in each of the next five years is 1,018, 1,322, 1,827, 2,208, 2,149.

Queen's scholarships may be held (by renewal) for two years. The number of such scholarships annually vacant, therefore, if the system were in complete operation, would be fully 1,000.

---

* Exclusively of those students in Scotland (upwards of 300) who lodge out of college.

Their Lordships resolved—

(1.) To extend the provisional measure (Minute of 20 August 1853), "*whereby pupil-teachers admitted before 1 January 1854 may continue to receive the rate of payment for the fifth year during the period to elapse between the end of that year and the 31st of the following December,*"* so far as to allow the period in question to be passed either in the pupil-teacher's own school, *or at a training college under inspection*, provided that the principal of the college (with the consent of the managers of the pupil-teacher's own school) apply to the Committee of Council for the pupil-teacher's admission, and forward a written authority from the parent or guardian of the pupil-teacher to receive, on his or her account, the payment due on the 31st of December.*

The Committee of Council will not further interfere with the terms of admission, up to 31 December, settled between the principal of the college and the friends of the pupil-teacher.

If the pupil-teacher fail in the examination for a Queen's scholarship, the Committee of Council undertake no responsibility beyond making good the payment due on 31 December.*

Their Lordships further resolved—

(2.) To make it a rule to extend Queen's scholarships to a second year's residence, in all cases where the authorities of the college apply for such extension.

The examinations for admission, and at the end of the year, will continue to determine the *class* of the scholarship (Minute of 14 July 1855) as at present.

Their Lordships further resolved—

(3.) To modify the system of examination at the end of the first year's residence, so far as to add to the present classes a *schedule* of students who are to be required to take up the first year's subjects again (viz., at the end of the second year), but without forfeiture of their scholarships, or of the lowest grant to the college in respect of the past year's training; provided, however,—

(*a.*) That the grant and the certificate at the end of the second year be at the rate and of the degree corresponding to the papers.

---

* In Scotland, 30 June.

(*b.*) That students quitting the college, with no higher rank than that of the first year's *schedule*, be regarded in all respects as uncertificated, until they shall have completed another year's residence, and passed the proper examination at the end of it.

The principal shall be at liberty, by notice in writing to the Committee of Council, before the 30th of June* in each year, to designate any student who may have appeared in the lowest class at the end of the previous (first) year's residence, as proper to be examined again upon the same terms as the students included in the *schedule;* but such designation on the part of the principal shall not affect the privileges attached to the student's rank in the previous examination.

Their Lordships further resolved—

(4.) To open the examination for Queen's scholarships to all competitors who might be selected and presented by the authorities of the several colleges on their own responsibility, subject to no other condition than that the candidates be more than eighteen years old, and (if pupil-teachers) have not deserted their service.

The admission of Queen's scholars will be regulated as follows:—

All the candidates who reach the prescribed standard will be arranged (pursuant to section X. of the Minute dated 20 August 1853) in the order of merit, irrespectively of their having been pupil-teachers or not.

From among the candidates thus declared to be admissible, the authorities of each college will be at liberty to select Queen's scholars in any proportion that does not allot more than ten per cent. of the total accommodation in each establishment to *Queen's scholars who have not been pupil-teachers.* Before their Lordships allow this rate to be exceeded in any college, they will require to have before them nominal returns of all the candidates selected as Queen's scholars in the different colleges, and their Lordships will judge from these returns what further admissions may be sanctioned from the same class.

(5.) In addition to the candidates admitted by competition, Queen's scholarships will continue to be offered to the following persons:—

(*a.*) Assistant teachers of three years' standing. (Minutes of 1854-5, vol. i., p. 11, sect. 7.)

---

* In Scotland, 31 December

(*b.*) Resident students in normal colleges (not having been pupil-teachers) who are more than 20 years old, and who have succeeded in passing the examination (*including the schedule*) at the end of their first year's residence. (*Ibid.*, p. 32.)

(*c.*) Teachers in charge of schools, and already certificated, but who have not yet resided more than one year in a training college. (Minutes of 1855-6, p. 33, and Parochial Union School Reports of 1855-6, p. 10.)

(*d.*) Teachers in night schools. (Minutes of 1854-5, p. 111.)

(6.) Their Lordships, considering the increased number of pupil-teachers who will be avilable as candidates in December 1858,* and thenceforward, reserve to themselves discretion to confine the examination in December 1858* to the class of candidates at present admissible, should their Lordships in the meantime judge it to be advisable to do so, but, in any such event, notice will be given before December 1857.†

Circular to Her Majesty's Inspectors of Schools, explanatory of foregoing Minute, dated 2 June 1856, relating to Queen's Scholars and Students in Training Colleges.

SIR, Education Department, 3 June 1856.

Explanatory Circular.

IN forwarding the enclosed copy of a recent Minute ‡ by the Committee of Council, for your information, I am directed by the Lord President to add the following account of its provisions and object:—

1. A considerable number of the pupil-teachers are lost to the training colleges at the end of their apprenticeship, because, during the interval which now occurs between that epoch in their career and the examination for Queen's scholarships, they are easily induced to accept offers of immediate employment. Their Lordships propose to afford to the most promising among them the means of going into immediate residence at a training college. The period which pupil-teachers pass at the college, between the end of their apprenticeship and the examination for Queen's scholarships in December, will reckon simply as supernumerary time, and will not be counted in their period of training.

After mature deliberation, their Lordships have determined that it would not be expedient to abandon the present plan of one uniform competitive examination for Queen's scholarships. The prospect of such an examination braces the whole system of apprenticeship; and it is hoped that, by allowing the candidates to come into provisional residence, they may be removed from the temptation, to which they are now exposed, of passing into employment instead of into training.

---

* In Scotland, June 1859. † In Scotland, June 1858.

‡ Minute dated 2 June 1856, *suprà*.

2. The principals of normal colleges have not been able to reckon with certainty whether a Queen's scholar of the first year would be continued in the same character for the second year, and this period of doubt has covered nearly the first quarter of each year, *i. e.*, until the revision of the exercises worked at the examination in the preceding December has been completed. By the new Minute, every Queen's scholar of the first year will henceforth become a Queen's scholar of the second year, by the simple fact that his name has been returned by the principal for continuance.

3. The training colleges have suffered in two ways, by the failure of students to pass the first year's examination satisfactorily. If the student has been rejected, the college has lost the grant for his first year's training; if, being doubtfully qualified, he has nevertheless managed to pass, such a candidate has often been simply a burden and hindrance to the second year's course of study. Henceforth, there will be an intermediate class, at the end of the first year, for those students who, without loss to the college in respect of the past year, may be required to repeat that year's course of study. It will still be possible for students to fail altogether in the examination, *i. e.*, not to reach the intermediate class or "schedule." No grant will be allowed on the examination passed by such students; but, if they are already Queen's scholars, and have been recommended by the principal for continuance, their scholarships will not be withdrawn by the Committee of Council.

4. As the admission of the pupil-teachers into provisional residence during the current year of training, in the normal colleges, will act soonest upon those colleges which are comparatively empty, and may so far tend to cut off a portion of the supply of pupil-teachers who would otherwise have resorted to colleges now full, their Lordships have thrown open the examination for Queen's scholarships to a new class of competitors, and they anticipate that a considerable supply of candidates may be found among young persons who are now assistants in private schools, among untrained schoolmasters and schoolmistresses desirous of improving their attainments, among Sunday school-teachers, and, generally, among all those individuals with a natural aptitude for the work of instruction who become known from time to time to the clergy and other promoters of education, and who, with a little preparatory assistance in their private studies, may readily be made to reach the standard of examination.

By the joint operation of these measures, my Lords confidently anticipate that the vacancies now remaining unfilled (about 300 out of 1,900) in the several normal colleges will find well-qualified occupants.

As the vacancies are far from being equally distributed among the several colleges, my Lords take this opportunity to record their opinion that the emptiness of certain institutions, in comparison with others, is not due to circumstances which imply inferiority; and it may be important to add that, as the examinations are absolutely the same everywhere, so, when a student has once passed those examinations, and has entered upon charge of a school, the question of the college in which he may have been trained is never again mooted by my Lords in determining his rank or estimation as a certificated master.

I have the honor to be, &c.
(Signed) R. R. W. Lingen.

To Her Majesty's Inspector of Schools.

Circular to Her Majesty's Inspectors of Schools, as to Students from Training Colleges, who, being included in Schedule, *proceed to take charge of Elementary Schools.*

Further explanatory Circular.

Sir, Education Department, 28 February 1857.

The Committee of Council have had to consider several cases arising under paragraph No. 3 of the Minute of 2 June 1856.

Students classed in the schedule have proceeded to take charge of schools on the plea, that at the time of their doing so the list of successful candidates had not been published, and that it was not necessary for them to make immediate engagements.

The Committee of Council cannot admit this reasoning. The words, both of the Minute itself and of the instructions by which it was accompanied, expressly mention that the schedule is established for the sake of continuing the second year's residence, with a greater latitude of adaptation to individual cases than had previously been conceded.

It is not likely that the period needed for the revision of the exercises worked in the December* examinations can be materially shortened. The interval is a necessary part of the system, and such inconvenience as is inseparable from it must not be made the ground for breaking through important conditions.

The principals of training colleges who recommend students at the end of one year's training, to the managers of schools, for engagement before the result of the examination is known, must hold themselves responsible for the consequences if those same students have to be regarded by the Committee of Council "in all respects as uncertificated." The principals have it in their power to form a tolerably exact estimate of each student's performance in the examination, and, in every instance where the success of a first year's student suggests a doubt, it is no more than justice both to the managers and students concerned,—and it is no more than a loyal co-operation in giving effect to the Minutes which encourage residence during a second year,—to refuse testimonials.

Their Lordships cannot recognize the training of students who fall below the schedule as of any effect in lieu of the conditions imposed upon untrained candidates, for certificates by the Minute of 10 December 1851; and those students who, being included in the schedule, proceed to take charge of schools will not be recognized in charge of pupil-teachers beyond the following December; after which, without sitting at the examination, they will be required to resume their residence in the training college, as if from the date of their former examination.

If the college authorities are unable or unwilling to receive such students, they can only obtain certificates as untrained teachers, under the Minute of 10 December 1851.

Their Lordships would be glad to see the training of all students, without exception, extended to two years in normal colleges, and least of all can they consent to facilitate and countenance its abridgment in those instances where an examination, confined to bare attainments, proves the need of that longer discipline for which other and higher considerations (Minutes of 1853–4, p. 28) always plead so strongly.

I have, &c.

(Signed) R. R. W. Lingen.

To Her Majesty's Inspectors of Schools.

---

* In Scotland, June.

Circular to Principals of Training Colleges, enclosing revised Syllabus of Studies for Male Students in Training Colleges and Scale of Marks.

SIR, Education Department, 22 January 1857.

Circular explanatory of revised syllabus and scale of marks.

I HAVE the honor to enclose a revised copy of the syllabus of studies in the male training colleges under inspection by Her Majesty's Inspectors, and I am directed at the same time to request your attention to the following observations:—

It has been represented to the Lord President that the authorities of the training colleges under inspection would find it useful, in the regulation of the work of the students, to know the marks which are given for the different subjects at the annual Christmas examination. I have the honor to communicate to you the scale of marks accordingly.

In this scale it has been thought better to give the marks assigned for "good," in each subject, than to give those assigned for "excellent," because "good" represents a point frequently attained, and the word, therefore, appeals to the experience both of teachers and students. The marks assigned for "excellent" are always in proportion to those assigned for "good," so that in every case a paper marked excellent may obtain 25 per cent. additional marks, but no more.

Among the subjects of examination are some a knowledge of which the Committee of Council consider so essential to the due discharge of the duties of a schoolmaster that a failure in any one of them is held to be sufficient to deprive the candidate of all claim to a place in the class list, however superior his other papers may be. These subjects are specially distinguished in the scale.

In assigning marks to the different subjects, the Committee of Council have been guided by two considerations, viz., the powers of mind indicated by proficiency in each, and the direct practical utility of each for purposes of elementary education. Thus, a good paper on History or on Euclid may justly be reckoned among the proofs of a cultivated and disciplined mind, likely to be highly useful in its influence over others. On the other hand, a knowledge of Arithmetic is, not only valuable in the same general sense, but, is furthermore so essential to a schoolmaster that, without it, he cannot discharge properly even the routine duties of his office. Full marks are therefore given for proficiency in History or Euclid, but failure in either or in both is not considered fatal. On the other hand, failure in Arithmetic will always deprive a candidate of a place in the class list.

The papers on School Management might, perhaps, be thought to deserve a higher number of marks than any other. This would be true if the subject of that paper did not enter largely into all the others. It has always been the practice to introduce questions on Method into the other papers; and, at the examination just concluded, the proportion of such questions to the rest was considerably increased. Special attention will continue to be given to the answers. The result will be that a large proportion of the marks assigned to any paper will depend on the degree in which the candidate shows himself capable of applying the subject of that same paper (whatever it may be) to the purposes of elementary instruction.

It should continue to be distinctly understood that proficiency in a few subjects is valued more highly than mediocrity in many. Their Lordships are obliged to admit many subjects into the programme, in order to leave the training colleges at liberty to regulate their course of study at their discretion; but it is not their Lordships' desire to encourage a large extent of superficial study, and in no case will two papers marked "moderate" receive as many marks as would have been given to one of them marked "good."

The minimum number of marks required to obtain a place in the class list is also specified in the enclosed table.

Failure in one of the essential subjects will not necessarily exclude a student at the end of his first year from the schedule mentioned in the Minute of 2 June 1856, as well as from the class list. The schedule carries with it no personal privilege whatever beyond that of being allowed to remain in training for another year at the public expense. The Committee of Council may therefore occasionally see fit to retain in the schedule the names of candidates who have failed in one of the essential subjects, but whose exercises generally indicate sufficient promise to justify their further training.

Failure in one of the essential subjects at the end of the second year (in the case of a student) or at any renewed examination (in the case of an acting teacher) will cancel all claims to a certificate arising out of any previous trial (Minutes of 1854–5, pp. 23–24 and p. 28).

Some changes (over and above the usual variation of certain of the subjects) have been introduced into the syllabus, the chief of which consist—

1. In adding English Literature to, and in including Physical Science among, the alternative subjects of the second year.
2. In requiring rather less under the head of Mechanics, at the end of the first year.
3. In confining School Management to means and methods in general, as distinguished from their application to special subjects.
4. In confining the Historical Examination of the second year to certain periods, and in greatly reducing the extent of the same examination in the third year.
5. In adding English Literature to the alternative subjects of the third year.

My Lords hope that these changes, coupled with the publication of the scale of marks, may have the effect of increasing liberty of choice among those who conduct the studies of the various training colleges, and also of giving a more sound, composed, and liberal character to the efforts of the students within well-ascertained limits.

Their Lordships have decided not to undertake a *vivâ voce* inspection in Music; at the same time their Lordships are aware that the paper examination is not a sufficient test of practical power. They have provided, therefore, that no candidate shall get the benefit of the marks attached to this exercise without first producing evidence that he possesses the actual power of discriminating musical notes.

It only remains to add some remarks upon the exercise in Welsh or in Gaelic.

No marks will in future be given for this paper *at the examination*, inasmuch as it is not of any *general* value in a master's attainments, but only *with reference to certain parts of the country*. The Welsh or Gaelic papers, however, that are marked "good" or "excellent" will in future be recorded against the candidate's name by the letters "G" or "W" in the calendar; and, as often as the Inspector certifies of any particular school that it is one in which a knowledge of Welsh or Gaelic is needful in the teacher, an extra payment of 5*l.* will be allowed, over and above the usual augmentation to any certificated teacher marked "G" or "W."

It is hoped in this way to encourage masters who possess a knowledge of Welsh or Gaelic *to remain in the schools where alone it is useful*. Such a knowledge will not help to raise the value of their certificates in any other situation.

I have the honor to be, &c.
(Signed) R. R. W. Lingen.

To the Principal of the ——— Training College.

Scale of Marks.

Note.—"Excellent" is in every case 25 per cent. above "Good."

Syllabus of Subjects in which Students in Training, and other Candidates for Certificates of Proficiency as Teachers in Elementary Schools, are examined.

First Year.

The Holy Scriptures.

1. The history, chronology, and geography of the Bible.
2. More particularly (*December* 1857) the text of *St. Mark's* Gospel.

The Catechism and Liturgy.†

1. The text. 2. The Scriptural authorities.

Church History.

The outlines of the history of the Reformation in England, and of Church history in the fifteenth and early part of the sixteenth centuries.

Reading.

To read with a distinct utterance, with due attention to the punctuation, and with a just expression, a passage from *Mr. Warren's* "*Select Extracts from Blackstone's Commentaries.*"‡

Penmanship.§

To write a specimen of the penmanship used in setting copies.
1. A line of large text hand. 2. A passage in small hand.

---

* Excludes candidates from a certificate, and cancels all claims arising out of any previous examination (Minutes of 1854-5, pp. 23, 24 and p. 28).

† The examination in the Liturgy is to be limited to the Morning and Evening Services and the Litany.

‡ In Scotland the four Appendices to Hume's History of England (*infrà*, p. 14.), if preferred as an alternative.

§ Sir, Whitehall, 24 May 1854.

I am directed by Viscount Palmerston to request that you will submit to the Committee of council on Education, for their consideration, that one great fault in the system of instruction in

Arithmetic.

1. To prove the usual rules from first principles.
2. To compute with precision and accuracy.
3. To make (with a knowledge of the principles) simple calculations in mensuration.*

Mechanics.

1. To describe the mechanical powers, and the most common modes of applying them.
2. To make simple calculations on the work of mechanical agents.

School Management.†

1. To answer, in writing, questions on the expedients to be used for the purposes of instruction in reading, spelling, and writing.
2. To draw up time-tables for use in a school under given circumstances.

English Grammar. ‡

1. Its principles.
2. To parse (*December* 1857) a passage from the *Chapters on "Master and Servant," and "Husband and Wife," in Warren's Extracts from Blackstone.*§
3. To paraphrase the same passage.

Geography.

1. To be able to describe‖ the outline maps of the four quarters of the globe.
2. To be able to describe‖ the map of each country in Europe.
3. To be able to draw¶ the outlines of the above maps from memory.

History.

The outlines of the history of England (to be known thoroughly).

Euclid.

The first four books.

---

the schools of the country lies in the want of proper teaching in the art of writing. The great bulk of the lower and middle orders write hands too small and indistinct, and do not form their letters, or they sometimes form them by alternate broad and fine strokes, which make the words difficult to read. The handwriting which was generally practised in the early part and middle of the last century was far better than that now in common use, and Lord Palmerston would suggest that it would be very desirable that the attention of schoolmasters should be directed to this subject, and that their pupils should be taught to imitate broad printing rather than fine copper-plate engraving.

I am, &c.

The Secretary of the Committee of Council on Education. (Signed) H. WADDINGTON.

* The course proper for an elementary school is here meant, being that which can be intelligently taught to persons having a good knowledge of arithmetic. The examples should be taken from a "Builder's Price Book."

† Passages taken from the Reading Lesson-books, commonly used in schools, will be given in the papers on all subjects which admit of it, and candidates will be expected to show how they would explain such passages to children. Each paper will also contain questions on *the method of teaching* the elementary parts of the subject to which it relates.

‡ All the answers made by the students on whatever subject (not confined to bare figures) will be examined as evidence, not only of their knowledge of the particular subject, but also, with a view to determine the marks to be allowed to them for grammar and composition. The power of writing plain and clear sentences, with correct syntax, orthography, and punctuation, is the immediate object of grammar. The greater part of the questions proposed on grammar will be founded on words or sentences taken from the work specified. It should be carefully read through, therefore, in short portions, as so many *exercises in language, in illustration of the English Grammar used in the college*, just as the Greek or Latin classics are read in public schools.

§ In Scotland the first Appendix from Hume's History of England (*infrà*, p. 14) may be taken, if preferred, in lieu of this exercise.

‖ The word "describe" is meant to be confined to *words* written, as distinguished from *drawing* in paragraph 3.

¶ The neatness as well as the correctness of these outlines will be taken into consideration. The degrees of longitude and latitude must be given.

*Algebra.**

As far as quadratic equations (inclusive); with problems.

Drawing. †

1. Drawing free hand from flat examples.
2. Linear geometry by aid of instruments.

Vocal Music. ‡

SECOND YEAR.

The Holy Scriptures.

1. The Acts of the Apostles.
2. The *Second* Epistle (*December* 1857) *to the Corinthians.*

Church History.

The history of the Church to the Council of Chalcedon.

Reading.

To read with a distinct utterance, with due attention to punctuation, and with a just expression, a passage from Milton's "*Paradise Lost*," or from Shakspeare.

Penmanship.—(As in First Year.)

Arithmetic.

1. The use of logarithms. 2. Compound interest and annuities.
3. Methods of teaching arithmetic generally.

School Management. §

1. To teach a class in the presence of the Inspector.
2. To answer questions in writing on the following subjects:—
   a. The different methods of organizing an elementary school.
   b. The form of, the mode of keeping, and of making returns from, school-registers.
3. To write a theme on some practical questions of education, founded on moral considerations.

English Grammar and Composition.

1. To paraphrase (*December* 1857) a passage from *Milton's "Paradise Lost," (Book* I.) *or from Shakespeare's "Lear."*‖
2. To analyze the same passage (according to Mr. Morell's work). ¶
3. To answer questions on the style and subject-matter of the work, or part of the work named.

---

* *Instead of* (but not in addition to) this subject, students may be examined in Latin as far as the end of page 84 of Yonge's "Eton Grammar" (E. P. Williams, Eton). This grammar is mentioned only for the sake of defining the extent of knowledge required, viz., accidence, concord, genders of nouns, perfect tenses, and supines of verbs. The paper will be confined to grammatical questions and to exercises within the limit prescribed.

† If candidates have already obtained prizes from the Department of Science and Art, in either of these two exercises, they may work two (*but not more*) of the next exercises in which they have not obtained such prizes, according to the course of drawing in the second year.

‡ This *paper* will not be given to any candidate who does not produce a certificate, signed by the principal of the training college, *that he can sing, or can play on some instrument.* Acting teachers, who are candidates, must produce a similar certificate from some competent person, such as the organist of their church, &c.

§ Passages taken from the Reading Lesson-books commonly used in schools will be given in the papers on all subjects which admit of it, and candidates will be expected to show how they would explain such passages to children. Each paper will also contain questions on the *method of teaching* the elementary parts of the subject to which it relates.

‖ A passage from *each* author will be given; *either* (not both) may be taken by the candidate.

¶ "The Analysis of Sentences explained and simplified." Theobald, London.

Geography.

1. Physical. 2. Political. 3. Commercial. 4. Popular Astronomy.

History.

A paper of questons will be given such as can be answered from a perusal of any one of the standard histories of England (Hume, Lingard, Pictorial, &c.) The paper will be divided into five sections, each section containing not less than five questions. The sections will reach (1) to the Battle of Hastings, (2) battle of Bosworth, (3) death of Charles the First, (4) death of Queen Anne, (5) 1815.

No candidate will be examined in more than one section. The object of the second year's reading in history should be to deepen and quicken *some specific part of* the first year's reading.

*Drawing.**

1. Free hand drawing from flat examples.
2. Linear geometry by aid of instruments.
3. Linear perspective.
4. Shaded drawing from objects.
5. Drawing of objects from memory.

Vocal Music.†

Alternative subjects of the second year *in one only* of which students will be examined.

Physical Science.‡	Higher Mathematics and Mathematical Physics.	English Literature.	Latin.
Chemistry and the rudiments of electricity and galvanism.§	1. The sixth Book of Euclid, with problems in the first four books. 2. The subjects which follow quadratic equations in Lund's edition of Wood's Algebra. 3. Trigonometry. 4. Levelling and land surveying. 5. To exhibit (with a knowledge of the principles) the structure and action of simple machines, and of the instruments most commonly used in teaching pneumatics, hydrostatics, and optics.‖	Three plays of Shakspeare, viz., *Hamlet*, *Tempest*, and *Coriolanus*, with Bacon's *Essays*, and the History of English Literature from Chaucer to Milton, inclusive. This exercise will be an extension of that headed "English Grammar and Composition," being similar to it in character, but with more especial reference to style and subject-matter.	1. To the end of Yonge's Eton Grammar (*suprà*). 2. An easy passage of Latin prose, and another of Latin poetry, will be given for literal translation into English, and simple grammatical questions will be founded thereon.

THIRD YEAR.

The Holy Scriptures.

1. The Bible generally. 2. The evidences of Christianity.

* Candidates need not work again exercises for which they have already obtained prizes from the Department of Science and Art, but may confine themselves to the other exercises.

† This *paper* will not be given to any candidate who does not produce a certificate, signed by the principal, *that he can sing or can play on some instrument.* Acting teachers who are candidates must produce a similar certificate from some competent person, such as the organist of their church, &c.

‡ No training college will be allowed to present candidates for examination in this subject if the Inspector reports that the institution is without sufficient apparatus to give experimental instruction.

§ H. M. Inspector, the Rev. F. Temple, names the following works as indicative of the subjects to which the examination will be limited, but not as the only works in which the same subjects may be studied for the purpose, viz., Dr. Wilson's Treatise on Chemistry, and selected chapters from the Elements of Natural Philosophy by Dr. Golding Bird and C. Brooke. (Churchill.)

‖ The following machines may be specified :—a pump, a door-lock, a house-clock, a Bramah's press, a crane, a fire-engine, a gasmeter, a thrashing-machine, a flour-mill, a steam-engine, and an organ ; also the following instruments :—an air-pump, a thermometer, a barometer, a hydrometer, a microscope (simple and compound), and a telescope. If large diagrams, showing the internal structure of each machine or instrument, and lettered to correspond with the paragraphs of a succint explanation at the foot, were hung on the walls of rooms frequented by the students, such knowledge would be imperceptibly acquired and perfected. The diagrams might be produced, or multiplied, by the students themselves. Models cost more ; frequent dissection is apt to spoil them ; and, without it, they are not more intelligible than the machines themselves. [As a text-book, Mr. Temple names the Rev. H. Goodwin's Elementary Course of Mathematics.]

School Management.

1. To teach a class in the presence of the Inspector.
2. To write an essay upon a thesis embracing the principles of education.

Vocal Music. Drawing. *See* Second Year.

In addition to the above subjects, students of the third year will be examined in *one* of the following subjects, at their option. They will be required to specify the subject at the commencement of the third year.

1. Mental science as applied to education.
2. Experimental science (especially as applied to manufactures and agriculture).
3. Higher mathematics.
4. Languages (ancient or modern), as a means of intellectual discipline.
5. History.
6. English literature.

---

i. *Mental Science.*

With regard to mental science as applied to education, it will have to be observed, in the first place, that an essay bearing upon this subject is required of *all* students at the end of the third year. The subject has to be regarded, therefore, not only from a general, but also, from a special point of view.

Any essay of the kind in question implies the power of giving an intelligent analysis of the human mind in its principal operations (moral and intellectual), and of accounting thereby for rules of practice in the actual business of education. The works of one or more standard authors should be carefully read, and the experimental verification of such reading should be sought in the model school of each training college.

If the same subject be further pursued as one of the specialties of the third year, their Lordships for the present will be prepared to consider such books as may be proposed to them in each training college, and they will endeavour to make such books the basis of a sufficient examination, embracing—

1. Logic. 2. The mental faculties. 3. Moral systems.

The number and variety of the books proposed under this grouping will perhaps not be so great as to render an examination which embraces all impracticable.

ii. *Experimental Science, especially as applied to Manufacture and Agriculture.*

The following works have been named as indicative of the subjects to which the examination will be limited, but not as the only works in which the same subjects may be studied for the purpose, viz.:—

Dr. Wilson's Treatise on Chemistry;

Professor Johnstone's "Elements of Agricultural Chemistry" and "Chemistry of Common Things;"

The Elements of Natural Philosophy by Dr. Golding Bird and C. Brooke (Churchill).

iii. *Higher Mathematics.*

Under this head Mr. Temple proposes to include—

1. Spherical trigonometry.
2. Astronomy* and the fundamental propositions of navigation.†
3. Mechanics.‡
4. Hydrostatics.*
5. Optics.*
6. Differential and integral calculus.

---

* See the propositions given in the Rev. H. Goodwin's "Elementary Course of Mathematics."

† See "Inman's Navigation" and Hymer's edition of Maddy's Astronomy. The candidate should be able to compute with accuracy.

‡ In addition to the propositions proved in Mr. Goodwin's course, the theory of work, including the principles of virtual velocities and vis viva, and the theory of simple machines and of elementary structures, taking into account friction.

iv. *Languages* (*Ancient or Modern*) *as a means of Intellectual Discipline.*

Any one of the following subjects, *but not more than one* :—

1. *Latin.*—The Four Georgics, Cicero's First Book of the Offices, to be translated and explained analogously to the works named under English grammar and composition for the second year.

To turn English into Latin prose. The English passage will be a translation from the specified work of Cicero.

2. *Greek.*—Similar exercises; the works to be Iphigenia in Tauris (Euripides), first book of Anabasis (Xenophon).

3. *German.*—Similar exercises; the works to be Schiller's Thirty Years War, Schiller's Wallenstein (Camp, Piccolomini, Death).

4. *French.*—Similar exercises; the works to be Thierry's Conquest of England by the Normans; Racine's Andromaque, Athalie, Iphigénie.

v. *History.*

Two of the periods named under History in the second year; adding Warren's Extracts from Blackstone*; Hallam's History of the Middle Ages (chapter VIII.), and Constitutional History.

vi. *English Literature.*

The history of English literature. A list of eight works, or parts of eight works, of approved English authors, to be submitted to their Lordships for consideration before the 1st of July.†

---

* In Scotland, if preferred as an alternative, the four Appendices in Hume's History of England which follow chapters III., XI., XLIV., XLIX., respectively, and chapters II. and VII. of Hallam's Middle Ages.

† In Scotland before the 1st of January.

PUPIL TEACHERS' BROAD SHEET.

Committee on Education, of Her Majesty's Most Honorable Privy Council.

N.B.—No application for aid from the Parliamentary Grant can be entertained excepting from the Trustees or Managers of the School for which the aid is desired. Trustees or Managers who will address a letter to—"The Secretary of the Education Department, Privy Council Office, London, S. W."—will be furnished with proper forms of application, and with such other documents as are necessary for a thorough comprehension of the benefits to which Schools may become entitled, and the conditions upon which those benefits are granted.

It is important that trustees and managers of schools, who intend to apply for the apprenticeship of Pupil Teachers, should bear in mind that their Lordships cannot grant such assistance unless Her Majesty's Inspector is enabled to report to them—

That the master or mistress of the school is either certificated, or (if above 35 years of age) registered as competent to conduct the apprentice through the course of instruction to be required;

That the school is well furnished, and well supplied with books and apparatus;

That it is divided into classes, and that the instruction is skilful, and is graduated according to the age of the children and the time they have been at school, so as to show that equal care has been bestowed on each class;

That the discipline is mild and firm, and conducive to good order;

That there is a fair prospect that the salary of the master and mistress, and the ordinary expenses of the school, will be provided for during the period of apprenticeship.

In some rural and small village schools, a master competent to conduct the instruction is assisted by a woman fit only to superintend sewing and knitting, and to preserve order. The managers of such schools have inquired whether, seeing that the woman is incompetent to give the intellectual instruction required, girls may be apprenticed as Pupil Teachers to the Master, on condition that they receive instruction in sewing and knitting from the woman? Upon a mature consideration of this question, their Lordships are of opinion that such apprenticeship is inadmissible. Their Lordships, however, might, *under special circumstances* to be reported by Her Majesty's Inspector, permit girls to be apprenticed to the woman, and to receive from the master, but always in her presence, such parts of the intellectual instruction as she might be unable to give.

Candidates must be at least thirteen years of age, and must not be subject to any bodily infirmity likely to impair their usefulness as Pupil Teachers.

Their Lordships have decided that the following interpretations are to be put upon this condition:—A constitutional infirmity, such as scrofula, fits, asthma, deafness, great imperfections of the sight or voice, the loss of an eye from constitutional disease, or the loss of an arm or leg, or the permanent disability of either arm or leg, curvature of the spine, or an hereditary tendency to insanity, are to be regarded as positive disqualifications.

In the cases of scholars giving evidence of high intellectual and moral qualifications, but whose education may have been accidentally interrupted, their Lordships might admit such candidates to apprenticeship until the age of sixteen; but, if the want of due proficiency before that age must be regarded as a sign either of the incapacity of the scholar or of the inefficiency of the teacher, the Inspector is instructed to refuse to recommend the candidate.

The allowance of Pupil Teachers in schools of average efficiency is one to every 40 or 50 scholars.

The Committee of Council on Education will not sanction the apprenticeship of a boy in a school where the average attendance is less than 50; nor of a girl where it is less than 40; and their Lordships will require, in schools so small as this, some evidence that the apprentice will possess advantages to compensate for the want of opportunity to study school-organization upon an adequate scale.

The indentures of all Pupil Teachers in England end at Christmas; if the admission falls in the first half of the year, then at the fifth Christmas thence ensuing; and, if the admission falls in the second half of the year, then at the sixth Christmas thence ensuing. Thus the indentures of all Pupil Teachers admitted in January to June 1854 will expire at Christmas 1858, and of all Pupil Teachers admitted in July to December 1854, at Christmas 1859.

The indentures of all Pupil Teachers in Scotland *end on the 30th of June; if the examinations fall in any month of the year earlier than June (inclusive), the apprenticeship will be for five years from the 1st of July next following; and, if the examinations fall in any month of the year after July (inclusive), the apprenticeship will be for four years from the 1st of July next following. Thus the indentures of all Pupil Teachers apprenticed in 1854 will end on the 30th of June 1859.*

The annual payments will by this arrangement be continued up to the date fixed for the end of the apprenticeship, so as in all cases to comprehend the time of examination for Queen's Scholarships.

As a provisional measure, to meet the case of apprentices admitted before the 1st of January 1854, their Lordships will consider recommendations by Her Majesty's Inspectors to prolong the rate of payment for the fifth year during the period to elapse between the end of that year and the 31st of the following December (*30th of June**); such payments to become payable as soon as the apprentice shall have gone through the examination for a Queen's Scholarship. Candidates of this standing may also compete for Queen's Scholarships in December (*June**), *before* the end of their apprenticeship, provided that such end fall not later than the last day of the following February (*August**). In the latter case, if they succeed in obtaining Queen's Scholarships, they will be paid as apprentices up to the 31st of December (*30th of June**), and thenceforth as Queen's Scholars, but not cumulatively in each capacity. Candidates who thus compete before the end of their apprenticeship, and fail, must return to complete their apprenticeship in their several schools, where they will be paid on the usual terms, at the end of their fifth year, but will be disqualified for prolongation of stipend.

* In the case of schools in Scotland.

SUBJECTS OF EXAMINATION FOR ELECTION, AND THROUGHOUT THE APPRENTICESHIP OR ENGAGEMENT.

N.B.—Her Majesty's Inspector will report every year on the progress of the Pupil Teacher in the art of teaching.

	Reading.	Grammar.	Writing and Composition.	Arithmetic and Mathematics.		Geography.	Religious Knowledge. In Schools not coming under Minute of 10 July 1847.† In Church of England Schools, the Clergyman assisting in the Examination.	Religious Knowledge. In Schools not coming under Minute of 10 July 1847.† In Schools in Scotland.	Religious Knowledge. In Schools not coming under Minute of 10 July 1847.† In Schools where the Managers are not desirous of coming under the obligation of giving the instruction set forth in the two preceding columns.	Drawing.‡ *Where suitable means of instruction exist.*	Music. *Where suitable means of instruction exist.*	History.	Certificates of Character and Conduct. In Church of England Schools.	Certificates of Character and Conduct. In Schools not being Church of England Schools.	Annual Payments of Pupil Teachers, and of Masters or Mistresses, for instructing them in the subjects of Examination. Pupil Teacher.	Annual Payments of Pupil Teachers, and of Masters or Mistresses, for instructing them in the subjects of Examination. Master or Mistress.
For Election -	To Read with fluency, ease, and expression.	To point out the Parts of Speech in a Simple Sentence.	To write in a neat hand, with correct spelling and punctuation, a simple prose narrative slowly read to them.	To write from dictation Sums in the first four Rules of Arithmetic, Simple and Compound, and to work them correctly, and to know the Tables of Weights and Measures.		To have an elementary knowledge of Geography.	To repeat the Church Catechism, and to show that they understand its meaning, and are acquainted with the outlines of Scripture History.	To repeat the General Assembly's Shorter Catechism, and to show that they understand its meaning, and are acquainted with the outlines of Scripture History.	Certificate from the Managers of the School that the Religious Knowledge of the Pupil Teacher is satisfactory to them.	- - -	- - -	- - -	A Certificate from the Clergyman and Managers that the Moral Character of the Candidates and their Families justify an expectation that the Instruction and Training of the School will be seconded by their own efforts and the example of their parents.	A Certificate from the Managers that the Moral Character of the Candidates and their Families justify an expectation that the Instruction and Training of the School will be seconded by their own efforts and the example of their parents.	—	—
End of 1st Year -	Improved articulation and expression in Reading.	The Noun, Verb, and Adjective; with their relations in a Simple Sentence.	To write from memory the substance of a more difficult narrative.	Male Pupil Teachers. Practice and Proportion.	Female Pupil Teachers. Practice and Bills of Parcels.	The British Isles. [Maps to be drawn in this and the following years.]	The Holy Scriptures and Catechism, with Illustrations by Passages from Holy Writ.	The Holy Scriptures and the Assembly's Shorter Catechism, with illustrations by Passages from Holy Writ.	Same as above.	Drawing free-hand from flat examples.	Shapes of Notes and Rests. Stave. Places of Notes on the Treble Stave.	- - -	1. Certificate of good conduct from the Managers. 2. Certificate of punctuality, diligence, obedience, and attention to their duties, from the Master or Mistress. 3. Certificate from the Clergyman that they have been attentive to their religious duties.	1. Certificate of good conduct from the Managers. 2. Certificate of punctuality, diligence, obedience, and attention to their duties, from the Master or Mistress. 3. In Schools not coming under the Minute of 10 July 1847, a Certificate from the Managers that they have been attentive to their religious duties.	£10.	For 1, £5. „ 2, £9. „ 3, £12. For each additional Apprentice, £3 more. This scale applies to each year of apprenticeship.
End of 2nd Year	Improved articulation and expression in Reading.	The Pronoun, Adverb, and Preposition; with their relations in a Sentence.	Composition of a Class Report [or the Abstract of a Lesson].	Vulgar Fractions.	Simple Proportion.	Europe and Ancient Palestine.	The Holy Scriptures, Liturgy, and Catechism, more fully than in the preceding year.	The Holy Scriptures and the Assembly's Shorter Catechism, more fully than in the preceding year.	Same as above.	Linear geometry, by means of instruments.	Dotted Notes and Rests. Time, various kinds of, and signatures of. Diatonic Scale.	- - -	Same as above.	Same as above.	£12 10*s*.	The annual gratuities offered by the Minutes of the Committee of Council on Education, for the instruction of apprentices, are paid on the same terms as the grants in augmentation of the salaries of certificated Teachers, that is, they are considered to be due for whole years only, and no fractional parts of them are paid to any Teacher who voluntarily quits the charge of his (or her) apprentice before the end of each school-year in respect of which such gratuities are due.
End of 3rd Year	Improved articulation and expression in Reading.	The Conjunction; with the Analysis of Sentences.	Composition of the Notes of a Lesson on a subject selected by the Inspector.	Decimal Fractions; and Euclid, Book I, to end of XVth Proposition.	Vulgar Fractions.	The Colonies.	More fully in the Holy Scriptures, Liturgy, and Catechism.	More fully in the Holy Scriptures, and the Assembly's Shorter Catechism.	Same as above.	Linear perspective, by means of instruments, applied to geometrical figures, plane and solid.	Intervals. Sharps and flats. Accidental intervals.	The Succession of the English Sovereigns from the Reign of Egbert, with dates, to the present time. [*In Scotland, if preferred, the succession of Scottish Sovereigns from Alexander III. may be substituted for the English Sovereigns preceding James I.*]	Same as above.	Same as above.	£15.	
End of 4th Year	Improved articulation and expression in Reading.	More advanced exercises in preceding subjects; with a knowledge of Prefixes and Affixes. [*As an alternative exercise, the regular declensions of Nouns, Pronouns, and Adjectives in Latin.*]	Composition of an account of the Organization of the School, and of the Methods of Instruction used.	Simple Interest; Euclid, Book I; and Algebra, First Four Rules.	Compound Proportion, and recapitulation of preceding exercises.	Asia and Africa.	More fully in the Holy Scriptures, Liturgy, and Catechism.	More fully in the Holy Scriptures, and the Assembly's Shorter Catechism.	Same as above.	Freehand drawing and shading, from solid models.	Places of Notes on the Bass Stave. Major and Minor Scales. Common Characters used in Music.	Outlines of British History to the accession of Henry VII.	Same as above.	Same as above.	£17 10*s*.	
End of 5th Year	Improved articulation and expression in Reading.	The same subjects. [*As an alternative exercise, the government of Prepositions, and the regular conjugations of Verbs in Latin.*]	Composition of an Essay on some subject connected with the Art of Teaching.	Problems in Arithmetic; Euclid, Book II.; and Algebra, to the end of Simple Equations.	Decimal Fractions, and Simple Interest.	America and The Oceans.	More completely in the Holy Scriptures, Liturgy, and Catechism.	More completely in the Holy Scriptures, and the Assembly's Shorter Catechism.	Same as above.	Freehand drawing and shading, of natural forms and objects, from memory.	Transposition and Modulation. Alto and Tenor Staves. Recapitulation of preceding exercises.	Outlines of British History from the accession of Henry VII to the present time.	Same as above.	Same as above.	£20.	

† Extract from Minute, dated 10 July 1847:—"There are schools to which grants may be made, though the managers object, on religious grounds, to make a report concerning the religious state of such schools."

‡ 1. Prizes will be given for each exercise, consisting of books, materials, and instruments calculated to be of use to the successful candidates in their further progress. A certain liberty of choice will be accorded to the candidates themselves, who, with the exercises, will be furnished with a list of the prizes, from among which they may mark upon their own exercise the particular prize they would prefer to obtain for it, if successful.

2. Pupil-teachers will be admitted to study in Drawing Schools in connection with the Department of Science and Art at half the ordinary fees.

3. Pupil-teachers, if attending such Drawing Schools, will not be required to perform an exercise in drawing at the annual examination before Her Majesty's Inspector, but will have another opportunity of being *examined in connexion with the Drawing School itself*, so as to obtain the prizes.

4. Pupil-teachers, if not attending such Drawing Schools, will have an opportunity of performing an *exercise in drawing at the annual examination before Her Majesty's Inspector*; such exercise to be of the same effect in obtaining prizes as if it had been performed in connexion with the Drawing School, pursuant to the last preceding paragraph.

5. Pupil-teachers, if not attending such Drawing Schools, but *permitted* (by arrangements between the managers of the schools in which they are apprenticed and the Master of any such Drawing School) *to be annually examined there instead of at the annual examination of Pupil Teachers before Her Majesty's Inspector*, may obtain the same prizes as are offered in the two preceding paragraphs.

6. Apprentices will not be required to pass again any of the exercises for which they may already have obtained prizes; but each exercise, as it is passed successfully, will be duly registered.

General Rule.—The qualifications to be required of candidates, and of Pupil Teachers in each year of their apprenticeship, will be regulated according to the table given above, in which the minimum of proficiency is precisely defined in order to prevent partiality; but their Lordships reserve to themselves the power to reward superior merit by shortening the term of the apprenticeship, or by awarding the higher stipends of the later years of the apprenticeship, to Pupil Teachers whose attainments enable them to pass the examination of one of the later years at an earlier period. *Candidates* above fourteen years of age may be apprenticed for four years, beginning with the emoluments of *the second year*, if they pass the requisite examination.

In Girls' schools the Pupil Teachers will be required to show greater skill in needlework, knitting, and cutting out clothes in each successive year.

Provision for Pupil Teachers who have successfully completed their apprenticeship.

I. At the close of the apprenticeship, every Pupil Teacher who has passed the annual examination will be entitled to refer to the Committee of Council any person who may, as an employer or otherwise, be properly interested in knowing his character, for a certificate declaring that he has successfully completed his apprenticeship. This certificate, as a testimonial of character, and of attainments, would be in itself a valuable introduction to the confidence of a merchant, or of a member of a learned profession, if the apprentice should then determine not to pursue the vocation of a Schoolmaster. But further than this, one of Her Majesty's Inspectors will shortly before Christmas in each year hold a public examination at each of the normal colleges under inspection, at which all those Pupil Teachers who have successfully completed their apprenticeship will be allowed to compete. From among the competitors will be selected a certain number of those who appear to be most proficient in their studies and most skilful in the art of teaching, and concerning whose character and zeal for the office of Teacher the Inspector is able to give the most favourable report.

The Committee of Council on Education, on comparison of the testimonials and examination papers of these apprentices, will award exhibitions for one year to as many qualified candidates (thenceforth denominated "Queen's Scholars") as answer to the total number of vacancies in all the normal colleges under inspection. The whole number will be comprised, in the order of merit, in a single list, and each Queen's Scholar will be at liberty to go to any of the normal colleges under inspection, the authorities of which may consent to receive him. The Principal of each normal college will be called upon to make a return to their Lordships of the names of his Queen's Scholars for the ensuing year, within twenty-one days after the date of publishing the list.

The subjects of examination will be those of the Pupil Teachers' course.

Candidates for Queen's Scholarships in normal colleges for females should acquire a knowledge of some good manual upon domestic economy. An exercise upon this subject, and also in sewing and cutting out will be given.

Scale of Payments on behalf of Queen's Scholars.

1.—From and after the 1st of January 1856, the payment to be allowed for all Queen's Scholars will be uniform, viz., £23 in the case of males, and £17 in the case of females.

2.—In consideration of this payment, the normal colleges, on admitting any Queen's Scholar, are understood to agree thereby to provide tuition, lodging, board, washing, and medical attendance for the Queen's Scholar without any further charge.

3.—To Queen's Scholars of the first class there will be allowed the following personal payments, in aid of their travelling and private expenses, and on the purchase of books:—

Males	First Year -	£4.	Females	First Year -	£3.
	Second Year -	£6.		Second Year -	£4.

4.—These personal payments will be made by half-yearly instalments, in Post Office Orders, to the Queen's Scholars themselves; the first half-yearly payment at Lady Day, and the second at Michaelmas, in each year.

5.—The personal payments will depend, like the rest of the exhibition, upon quarterly certificates, by the Principal, of the Queen's Scholar's good conduct, attainments, and skill in the pursuit of his [or her] profession.

The exhibition (which is renewable for a second year) is liable to be withdrawn if the Queen's Scholar fails in the examination of Students at the end of the year, or if the Principal of the normal college expresses himself dissatisfied with the conduct, attainments, or skill of the Queen's Scholar.

Thus Government may assist a meritorious Pupil Teacher with 131*l.* in educating himself for the office of Schoolmaster, viz. 75*l.* in the course of his apprenticeship, and 56*l.* for two years passed by him at a normal college, besides the sums paid during the apprenticeship to the Master of the elementary school for special instruction given to the Pupil Teacher, and, at the end of each year's residence in the normal college, to the authorities thereof, in aid of such part of the cost of training as is not covered by the Queen's Scholarship.

In the case of Pupil Teachers who have completed their apprenticeship, the Committee of Council will, pursuant to a Minute dated 23 July 1852, recognize their employment as Assistants in schools liable to inspection, under the following conditions, viz.:

1.—That, in each year of their apprenticeship, they shall have acquitted themselves creditably upon examination before Her Majesty's Inspector, and shall have produced unqualified testimonials from the managers and teachers of their schools.
2.—That the Master or Mistress of the school in which the Assistant is employed hold a Certificate of Merit.
3.—That the School be well furnished and well supplied with books and apparatus.
4.—That every such Assistant shall be taken to be equivalent to two apprenticed Pupil Teachers, in reckoning the number of such apprentices to be maintained at the public expense in any school.
5.—That every Assistant produce the same annual certificates as are required of apprentices from the managers and principal Teacher of the school, and be favourably reported of by Her Majesty's Inspector as to attainments and practical skill.

When the foregoing conditions are fulfilled, their Lordships will allow an annual stipend of 25*l.* in the case of a male and 20*l.* in the case of a female Assistant Teacher.

Their Lordships will allow, without further examination, a Queen's Scholarship of the FIRST CLASS to all Assistants who shall have acquitted themselves satisfactorily for three years. Applications for such scholarships must be transmitted to their Lordships' Secretary *through the Principal of some normal college under inspection*, who is willing to receive the applicant, from the 1st of the following January, as one of the Queen's Scholars then to be allowed.

Assistant Teachers of three years' standing and upwards may be examined for Certificates of Merit, but will not be admissible to receive pecuniary augmentation on account of them, except on fulfilment of the usual conditions of such grants.

AUGMENTATION BROAD SHEET.

Committee on Education, of Her Majesty's Most Honorable Privy Council.

N.B.—No application for aid from the Parliamentary Grant can be entertained excepting from the Trustees or Managers of the School for which the aid is desired. Trustees or Managers who address a letter to—"The Secretary of the Education Department, Privy Council Office, London, S.W."—will be furnished with the proper forms of application, and with such other Documents as are necessary for a thorough comprehension of the benefits to which Schools may become entitled, and the conditions upon which those benefits are granted.

AUGMENTATION OF SALARIES OF SCHOOLMASTERS AND SCHOOLMISTRESSES WHO HAVE OBTAINED CERTIFICATES OF MERIT.

Their Lordships will grant, in aid of the salary of every Schoolmaster and Schoolmistress appointed to a School under their Inspection, annual sums, according to the conditions set forth in the following table. The amount of the Grant will depend in each instance *primarily* upon the class of the Certificate. But Teachers entitled by their Certificates to one of the higher rates of augmentation will not be deprived of a lower rate, if their salaries and emoluments fulfil the conditions of that lower rate but not of the higher rate; and they would become entitled to the rates of augmentation corresponding to their Certificates if at any time afterwards they obtained the requisite salaries and emoluments.

Three classes of Teachers are recognized in their Lordships' Minutes. 1.—Principal Teachers (as herein-after set forth). 2. Assistant Teachers, pursuant to the Minute of 23 July 1852. 3. Pupil Teachers, as set forth on the back of this Sheet. In cases where School Managers desire to obtain Grants for Assistant Teachers, the Assistants must be brought within the conditions which define one or other of these three classes.

1. The augmentation commences from the first day of the month next following the date of the examination, provided that the Teacher obtaining the Certificate be then in charge of an Elementary School under inspection.

2. Certificated Students or Teachers entering upon the charge of their first, or of new, Schools, are conditionally entitled to Grants in augmentation of their salaries from the month next following the date of notice to the Committee of Council, from the Managers, of the exact day on which the charge was undertaken.

3. Their Lordships will direct the inspection of the School to take place within one year; and, if the period appointed for the annual visit of Her Majesty's Inspector does not harmonize with the date at which the Teacher obtained his Certificate or entered upon his School, he will receive a proportionate payment for the intervening months.

4. Proportionate payments will be made for the first year only. The rule is that Augmentation Grants are conditionally due for periods of twelve months; such periods being reckoned from the month allotted for the annual visit of Her Majesty's Inspector in one year to the same month in the following year; and Teachers who quit their Schools in the course of one of these periods will not receive payment for any portion of the incomplete period.

MASTERS.

Qualifications.

N.B.—*A detailed Syllabus of the Subjects of Examination, some of which vary from year to year, will be forwarded on application to the Secretary of the Education Department.*

Conditions to be fulfilled by the School Managers.

Where the Master has a House or suitable Lodgings, rent-free.

To exhibit a competent ability in—	To teach a class in the presence of H. M. Inspector, with special regard to—	Minimum Salary to be paid by the Managers, independently of the sum granted in augmentation by the Committee of Council on Education.	Minimum proportion of school income to be raised by voluntary contributions.*	Rates of Augmentation by the Committee of Council on Education.‡

Teachers who have completed their 35th Year may choose whether they will take the First or the Second Year's Subjects.	Illustration, Whether by drawing, or otherwise?			
Those who have not completed their 35th Year must pass for the First Year, and will not be certificated thereupon higher than the third degree of merit. In order to exceed that rating, they must pass for the Second Year on a subsequent occasion.				
Schedule C.				
Subjects for the Third Year.				
The Bible generally.				
The Evidences of Christianity.				
School Management.				
Vocal Music.				
Drawing.**				

In addition to the above subjects, Students of the Third Year will be examined in *one* of the following subjects, at their option. They will be required to specify the subject at the commencement of the third year.

1. Mental Science as applied to education.
2. Experimental Science (especially as applied to manufactures and agriculture).
3. Higher Mathematics.
4. Languages (ancient or modern), as a means of intellectual discipline
5. History.
6. English Literature.

N.B.—A paper on Welsh, and a paper on Gaelic, are presented to such Teachers as desire to work them, with a view to service in Welsh or Highland Schools. Every teacher who passes a *thoroughly* good Examination in one of those languages will be specially registered; and, as often as Her Majesty's Inspector certifies of any particular School, that it is one in which a knowledge of Welsh, or Gaelic, is needful in the Teacher, an extra payment of 5*l.* will be allowed, *over and above the usual augmentation*, so long as the Teacher remains in that School.

If the Master be not provided with a House or suitable lodgings, rent-free, a FURTHER SUM of 10*l.* must be added to every sum in EACH of these columns. In Wales, or in the Highlands of Scotland, it will suffice to add 6*l.* 13*s.* 4*d.*, under the like circumstances.†

CERTIFICATES

Of Merit by the Committee of Council on Education.	Annual. By the School Managers.	Annual. By H. M. Inspector of Schools.	Rates of Augmentation by the Committee of Council on Education.‡
			£ s. d.
Upper Degree—			
1st Division			20 0 0
2nd Division			18 0 0
3rd Division			16 0 0
Middle Degree—			
1st Division			15 0 0
2nd Division			14 0 0
3rd Division			13 0 0

1st Division			12 0 0
2nd Division			11 0 0
3rd Division			10 0 0
			8 6 8
			6 13 4

The Lower Class of Certificate answers to the subjects of the First Year.

The Middle Class answers to the subjects of the Second or Third Year.

The Upper Class is reserved for extraordinary merit in the written Examination, coupled with corresponding efficiency in School-keeping during the two years of probation§; until the end of which period the Class List remains *a simple record of Examination* and does not confer the grade of Certificated Teachers upon those named therein.

Teachers who have completed their 35th year may obtain the Middle or Upper Class, although passing upon the first year's subjects.

Teachers engaged (without removal) in Schools which, for two years immediately preceding the Examination have been receiving annual grants, may be certified at once, according to the next Report of the Inspector, without further probation.

That the Teacher's character, conduct, and attention to duty are satisfactory.

That the Teacher's School is efficient in organization, discipline, and instruction.

Teachers in Welsh or Highland Schools, obtaining Certificates of Merit from the Committee of Council in the Third Division of the Third Class, will be conditionally entitled, according to the amount and composition of their salary, to one of the three rates of augmentation which are bracketed together. In other *Schools, 15l. is the lowest augmentation allowed.*

MISTRESSES.

Conditions to be fulfilled by the School Managers.

Where the Mistress, or her Husband (being the Schoolmaster), has a House or suitable Lodgings, rent-free.

Qualifications.

The Examination of Female Candidates is not separated according to the years of Normal Training, but each paper is divided into elementary and supplementary sections.

Rates of Augmentation by the Committee of Council on Education.‡	Minimum Salary to be paid by the Managers from voluntary contributions and school-pence, independently of the sum granted in augmentation by the Committee of Council on Education.	Minimum proportion of school income to be raised by voluntary contributions.*	To exhibit a competent ability in—	To teach a class in the presence of H. M. Inspector, with special regard to—

If the Mistress be not provided with a house, or suitable lodgings, rent-free, a FURTHER SUM of 6*l.* must be added to every sum in EACH of these columns. In Wales, or in the Highlands of Scotland, it will suffice to add 4*l.* under the like circumstances.†

Teachers in Welsh or Highland Schools, obtaining Certificates of Merit from the Committee of Council in the Third Division of the Third Class, will be conditionally entitled, according to the amount and composition of their salary, to one of the three rates of augmentation which are bracketed together. In other *Schools, 10l. is the lowest augmentation allowed.*

TIME AND PLACE OF EXAMINATION.

The first step to be taken by teachers in charge of Elementary Schools who desire to be examined for Certificates is to request the Managers of their Schools to apply to the Committee of Council on Education. All correspondence with the Committee of Council must be conducted by the Managers of the School in which the Teacher is engaged.

Teachers who have left Normal Colleges subject to Inspection, under the authority of the Committee of Council—	Teachers who have been trained in Normal Colleges not subject to Inspection, under the authority of the Committee of Council, or who have not been trained in Normal Colleges.
May be conveniently assembled at the Annual Examination held at the Normal College in which they were educated, and may be examined in common with the Students. The Teachers who have left the School will be expected to give evidence of a higher degree of practical skill in teaching, and of a deeper knowledge of discipline, organization, and method; in other respects, evidence will be required of attainments closely similar in degree to those of the Students in the Normal College.	May, if found qualified, on application to the Committee of Council, and with the sanction of the Principal, attend the Examination at one of the Normal Colleges under inspection, which are generally opened, by the courtesy of the authorities, to such Teachers, being properly introduced; although they may never have been Students. These Examinations are held in the month of December, for England and Wales, and about Midsummer, for Scotland.
Teachers who are presented for Examination by the authorities of the particular Colleges in which they resided as Students, *without application on the part of the Managers of the Elementary Schools in which they are engaged to the Committee of Council*, will (being successful) appear in the list; but no Certificate of Merit obtained under such circumstances will entitle the holder of it to a Grant of Augmentation until the Managers of some Elementary School have satisfied their Lordships that the requisite conditions of a Grant are fulfilled.	Candidates (*not having been Pupil Teachers, nor Students in Normal Colleges under inspection*), cannot be admitted to be examined for Certificates until after they have completed their 22nd year, and their Schools have been inspected and favourably reported upon by one of Her Majesty's Inspectors (Minute of 10 December 1851).

No Teacher will in future be admitted to the December Examination (in Scotland, June) whose name has not been communicated in writing to the Secretary of the Education Department before the 20th day of the preceding November (in Scotland, 20th of May).

Grants to Normal Colleges for every Student trained therein, who, at the examination of those institutions by H. M. Inspectors, is classed—

	At the end of year's residence.	For Students in each class of Merit.	To be granted to the Treasurer of the College.
			£ s. d.
First		1	20 0 0
		2	16 0 0
		3	13 0 0
Second		1	24 0 0
		2	20 0 0
		3	16 0 0
Third		1	24 0 0
		2	20 0 0
		3	16 0 0

Two thirds of the above sums will be granted to Normal Colleges for Females on account of Students who obtain the corresponding Certificates.

No Grant will be made to a Normal College for Students who have not at the time of the Examination been resident at least a year in the College.

Teachers who at the Examination of a Normal College obtain Certificates, having completed their course of instruction there within the year ending at the date of the Examination, are, for purposes of Grants to the College, considered as Students.

The Grants specified in this column are paid in the nature of reimbursement to the authorities of each College. They are wholly distinct from the Queen's Scholarships, which belong to each exhibitioner individually. (See Broad Sheet for Pupil Teachers.)

¶ Extract from Minute dated 10 July 1847:—"There are schools to which grants may be made though the managers object, on religious grounds, to make a report concerning the religious state of such schools."

* The rest of the School income must be derived from *School-pence*, unless a greater proportion than that stated above, or the whole, be derived from *voluntary contributions*. Their Lordships will, however, be disposed to receive and consider a special report in favour of any self-supporting School which may appear to merit admission, as an exception to this rule. No funds derived from any *permanent endowment*, whether local or general, can be taken into account, except during the life of the donor.

† If the Master and Mistress of a School are man and wife, or brother and sister, or father and daughter, living together, with a joint Salary, and each or one of them seeks a Grant of Augmentation, their joint Salary must be sufficient (upon a supposed division) to fulfil in *each* case the conditions of the Grant to which their *respective* Certificates entitle them; but the house or lodgings rent-free, or the money equivalent, will only have to be provided *once*, and may be reckoned indifferently as belonging to *both* or *either* of them

‡ These Grants will be made by Post Office Orders, payable to the Teachers themselves. They belong exclusively to the Teachers, not to the general funds of the School. Their Lordships cannot sanction corresponding reductions in the previous Salaries of the Teachers, even though more than sufficient to fulfil the conditions of the particular Grant.

§ Students in Normal Colleges are *classed*, at the end of each year of training, according to the result of the examination passed by them, but are not certificated. No Certificate of Merit is granted to a student, as a teacher, until he has been for two years in charge of *the same* Elementary School, and has been twice reported on, as the Teacher of it, by Her Majesty's Inspector. Whether he is to be entitled to a Certificate, and of what class, is determined by the tenor of those reports, and by the result of his examination previous to quitting the Normal College. If the first report be favourable, he is paid for the first year on the scale of the lowest class. If the second report be favourable, his Augmentation and class of Certificate is fixed for the next five years. After which interval, and so on from time to time, the Certificate and Augmentation will be open to revision, according to the character of the intermediate reports. The value of the Certificate, in the first instance, is not fixed higher than the first division of the third class, for any Student who has resided less than two years at a Normal College under Inspection.

Re-examination will not raise the value of a Certificate until the time comes for revising it at the end of the then current period of five years. If, at the end of that period, a teacher is found to have afforded evidence, not only of improved school-keeping, but also, of increased attainments, he will not fail to reap the benefit of such two-fold merit, and *vice versâ*; but in the meantime the result of the re-examination will be simply recorded.

** *A memorandum of full competency to give instruction in Drawing* will be recorded in favour of those candidates only who have successfully performed each of the five exercises enumerated below.

Teachers already holding Certificates of Merit may either attend the December (*in Scotland, June*) Examinations at the Normal Colleges before Her Majesty's Inspectors, in order to perform the exercises in Drawing, or they may make any arrangement which may be in their power for attendance at a Drawing School, in connexion with the Department of Science and Art, in order to be examined there.

Prizes consisting of books, materials, and instruments, calculated to be of use to the successful Candidates in their further progress, are given for each exercise. A certain liberty of choice is accorded to the candidates themselves, who, with the exercises, are furnished with a list of the prizes, from among which they mark on their own exercise the particular prize they would prefer to obtain for it, if successful.

Teachers conditionally entitled, as the holders of Certificates of Merit, to augmentation of salary, may receive, in addition to that augmentation, the following annual payments, according to the exercises which they may be registered as having passed in Drawing.

a. Freehand	£2	Memorandum of
b. Linear Geometry	1	full competency
c. Linear Perspective	1	to give instruction
d. Model and Object Drawing	1	in Drawing.

If it should be reported to the Committee of Council on Education that undue preference is given to Drawing over other necessary branches of elementary instruction, or that Drawing is not made conducive to good Writing, or that Drawing itself is not properly taught throughout the School, these payments will be liable to be withdrawn.

A Certificated or Registered Teacher with Apprentices, holding a Memorandum of full competency in Drawing, may (in addition to the sums mentioned in the last paragraph, and also in addition to the ordinary augmentation and gratuity) receive the sum of £1, for every Apprentice, up to a maximum of £3, who has been entirely instructed by the same teacher in Drawing, and whose annual progress in Drawing is satisfactory.

No Candidate who is required to pass the general examination before Her Majesty's Inspector, as for the end of the first year, may obtain a Memorandum of competency in Drawing for more than *two* of the branches enumerated above.

Candidates of the second year are not subject to the last preceding limitation.

Candidates will not be required to pass again any of the exercises for which (whether as Apprentices, Students, or Teachers,) they may have already obtained prizes; but each exercise as it is passed successfully, at whatever stage of their scholastic career, will be duly registered as so much gained towards the Memorandum of full competency in Drawing, and in the meantime will bear the corresponding value as soon as the candidate has become a Certificated Teacher.

REFORMATORY SCHOOLS.

MINUTE, dated 2 June 1856, offering *Grants* for promotion of Schools wherein Children of *Criminal and Abandoned Classes* may be reformed by *Industrial Training.*

At the Council Chamber, Whitehall, the 2nd day of June 1856.

BY THE LORDS OF THE COMMITTEE ON EDUCATION, OF HER MAJESTY'S MOST HONORABLE PRIVY COUNCIL.

THEIR Lordships resolved to continue the grants at present made in aid of field gardens and workshops *annexed to common elementary day schools*, but, as regards "ragged or reformatory schools," to cancel all existing Minutes, and to provide as follows (no school being admissible to aid under this Minute unless it be *industrial* in its character, and unless the scholars be taken exclusively from *the criminal or abandoned classes*):—

(1.) To pay half of the rent.

(2.) To pay one-third of the annual cost of tools and of raw material for labour.

(3.) To make grants towards the cost of books, maps, and apparatus, upon the same terms as to other schools.

(4.) In order to encourage the preparation of suitable schoolmasters for employment in these institutions, to grant the sum of 35*l.* to the treasurer of any reformatory school in respect of every person, qualified as next under mentioned, who shall have been boarded, lodged, and trained as a master in the reformatory school during a period of twelve months, viz.:—

(*a.*) All teachers of common elementary day schools holding certificates of merit, or registered.

(*b.*) All teachers of workhouse schools holding certificates of efficiency.

(*c.*) All students in normal colleges under inspection, who shall have resided therein not less than one year, and shall have successfully passed the examination at the end of the year before Her Majesty's Inspectors of schools.

Their Lordships also resolved to reimburse to the said treasurer any sum not exceeding 6*l.*, which it may have been found necessary to advance for the purpose of travelling or personal expenses to such persons in training.

The conditions of all such grants to be:—

(*a.*) That the reformatory contain at least forty inmates, and be sanctioned or certified by the Secretary of State, under the Acts 17 & 18 Vict., c. 74. and c. 86.

(*b.*) That Her Majesty's Inspectors of schools recommend the school, from year to year, as a suitable place, in in its character and arrangements, for receiving masters into training for reformatory schools.

(*c.*) That payment of the grant be made by quarterly instalments; and that the same certificates of good conduct be required from the principal of the institution, on behalf of each person in training, as are now required in the case of Queen's scholars.

(5.) To grant half of the salary agreed to be paid by the managers to every master and to every assistant master, in any ragged or reformatory school, in the following ratio :—

For any number of inmates not exceeding 25, 1 master;

Between 25 and 50, 1 master, 1 assistant.

An additional assistant to be allowable for every 25 additional inmates above 50; and an additional master (instead of an assistant) for the first 25 inmates after every 100; these allowances giving 1 master and 3 assistants as the ordinary staff for every 100 inmates.

Every master, if untrained, must be upwards of 25 years old, and every assistant upwards of 18 years old. Industrial instructors may be counted as assistants.

If the salary agreed by the managers to be paid to an assistant exceed half of that of a master in the same school, the excess will not be reckoned in calculating the sum to be reimbursed by the Committee of Council on Education.

Her Majesty's Inspectors of schools must report favourably, in each year for which the grant is paid, with especial reference to the following points :—

(*a.*) That the ability and character of the schoolmaster and assistants are satisfactory.

(*b.*) That habits of obedience, cleanliness, and order are enforced in the school.

(6.) To grant as capitation, upon every child (according to the number in average attendance during the year preceding the annual inspection) *who is not paid for by the Lords Commissioners of the Treasury, under the Act* 17 *&* 18 *Vict., c.* 86., the sum of 50*s.* per annum, provided that such child be fed at the school.

Circular to Her Majesty's Inspectors of Schools, explanatory of foregoing Minute, dated 2 *June* 1856, *relating to conditions of aid to Reformatory Schools.*

SIR, Education Department, July 1856.

Certified and uncertified reformatories.

I AM directed to bring under your notice the enclosed copy of a Minute, dated 2 June 1856, on reformatory schools.

The inspection of reformatories will be arranged upon the same plan as that of common elementary schools, *i.e.*, a certain month will be fixed for

the Inspector's visit, and all annual grants (*except those under Section 4 of the Minute*) will be paid for years ending at that date. The institutions to be inspected will fall into two classes. There will be—

1. Those institutions which are conducted upon a considerable scale, and which are recognized by the Secretary of State in pursuance of Acts of Parliament. But there will also be—
2. A large number of smaller institutions which now, under the names of asylums, homes, refuges, ragged schools, and the like, attempt, with varying degrees of completeness, to effect the object proposed by the Minute.

Both classes of institutions (the larger and the smaller) may share *equally* in the following forms of aid :—They may receive half the rent; one-third of the cost of tools, books, and raw materials of labour; one-half of the salaries; and an annual capitation-grant upon every child who is provided with food as well as instruction, and who is not otherwise paid for by the Treasury.

The larger and certified institutions will however enjoy *this further privilege*, that, they may receive candidates, from certain specified classes, for training as masters, and may be paid on their account such a sum as nearly corresponds to the allowance for a Queen's scholar in a normal college of the ordinary kind.

Candidates in training.

The system of examination and the course of instruction proper for an ordinary normal college would be unsuited to a reformatory. In abandoning, therefore, any such requisition, it has been an object to specify those classes of candidates who have given proof that they *already* possess a fair amount of intellectual acquirements, as well as some familiarity with the ordinary routine of school-keeping. The reception of such candidates into training will require no addition to the staff for their own instruction; occasional lectures, and examinations by the principal, will suffice to keep up their knowledge; and they will be useful assistants to the ordinary officers of the institution, at the same time that they are qualifying themselves for independent employment.

In accordance with this view, the allowance which, in the case of a Queen's scholar, is divided between his own bursary and the grant made to the college, for his examination at the end of each year, is in the present instance consolidated. Her Majesty's Inspectors, at their annual visits, will report upon the qualifications and ability of the candidates in training, but the candidates will not be further subjected to a general examination in the same manner as students in ordinary normal colleges.

As the number of institutions in which masters can be suitably trained is not likely to be large, the special payments allowable *under the fourth Section of the Minute* will be separated entirely from the rest which are to be issued on the annual report of the Inspectors.

Intellectual discipline as an instrument of reformation.

It is not supposed by their Lordships that the attainment implied by the definition of the classes from which the choice of candidates for training must be made constitute all that is wanted in a reformatory teacher. Their Lordships do consider, however, that there is a very close connexion between the peculiar qualifications of such a teacher and the attainments in question, *as means through which those qualifications may operate with increased effect.*

If intellectual instruction ought to occupy any place at all in the reformatory process, it ought to be good as far as it goes.

Criminal boys often possess sharpness and cunning, but this is a very different thing from acquiring a power of sustained attention and a methodical application of the mind. It is in the inculcation of these last-mentioned habits that intellectual discipline becomes identical with moral discipline of a high order. The humbleness of the form and the limited degree in which intellectual instruction may be imparted do not alter this truth, nor dispense with the necessity for an able teacher. In more than one reformatory which has been inspected, the intellectual instruction is not

only limited but bad. School-lessons should take their turn with hard bodily labour, but should never be allowed to supersede it as the staple of each reformatory institution.

Teachers employed in reformatories.

Grants under the fifth section of the Minute are *not* confined to those masters and assistants who have been trained, nor are they offered in the way of augmentation. The managers will receive half the sums which they return as the salaries agreed to be paid; but, so long as those salaries are paid, the grants may be carried to the general account of the school. Their Lordships reserve to themselves discretion to determine whether any particular salary, by its amount or otherwise, falls fairly within the scope of the Minute.

You will observe that the Government leaves the choice of teachers absolutely to the managers, interposing no test whatever, except the Inspector's annual report *upon certain specified points.*

According to the organization adopted in each reformatory, the *master*, for whose salary allowance is made, may or may not be the principal teacher in school. If he is not, the school-teacher may be counted among the *assistants* in claiming a grant, according to the number of instructors admissible under the Minute. The principal officer ought in all cases to be well enough instructed to be able to control, and to be responsible for, the work of the school-room.

The literary ability of a teacher may be regarded as sufficient if the Inspector is satisfied that the boys under his charge learn to read, write, and cipher, in such a manner as to acquire *the practical command of those arts in earning their bread and making their way in the world.* A boy who reads with difficulty and without intelligence, who writes imperfectly and spells ill, who cannot readily apply the rules of arithmetic to a common transaction of the shop or of wages, might as well, for most practical purposes, be unable to read, write, or cipher at all. You should apply this test rigorously in examining all such boys as are on the eve of leaving the school.

In the same way as to religious knowledge, you should endeavour to ascertain that the doctrines and maxims of Christianity are taught in such a manner as to be likely to become motives and rules of conduct.

In the same spirit you will bear in mind that no oral delivery of moral lessons can be so effective as that which results from daily practice. You will not, therefore, allow any general professions to weigh against the evidence which a school, or workshop, may present *in itself* of a want of order, obedience, and cleanliness. A disobedient, dirty, ill-conditioned lad is not to be talked out of those habits, but can only be cured by being obliged to live in daily and hourly contact with the practical opposites of them.

Inmates on whom capitation grant is allowed must be fed, not paid for by Treasury, and under twenty-one years of age.

With regard to the rule which confines the capitation grant to those children who are—

1. Fed, and
2. Not paid for by the Treasury,

the former test is adopted, because experience seems to show that, without the offer of food, the lowest part of the juvenile population cannot be reached by instruction, and because, while this circumstance renders ragged or reformatory schools more costly than others, it also serves to distinguish them broadly from common elementary day schools. You will be careful on all occasions to inquire and report whether the reformatory is *confined* to the most degraded class of children.

It has been known to happen that a ragged school, by the offer of food, has emptied a neighbouring day school, where the parents of the children were previously paying for their instruction; *such a result is an unmixed evil.* No positive rule can supply the place of personal vigilance and good faith, on the part of the managers, in guarding against such abuses. It is to be hoped that, if proper pains be taken to explain the nature of these schools, few decent parents, however poor, will be so wanting in honest pride as to be tempted to send their children to them. The relief of want should not be confounded with the remedy for vice and crime. The honest children of

honest parents should no more be brought to reformatories for education than to hospitals for food.

The Committee of Council considered to question whether lodging as well as food should be taken into account, and decided in the negative, except so far as the allowance towards rent may suffice to meet the cost of dormitories. There are many excellent institutions in which the inmates are not lodged; and in some others, where they are lodged, it would have been desirable to secure much more complete premises and arrangements for classification, before undertaking any such charge. You will carefully examine and report upon the day-rooms, dormitories, and offices, no less than the school-rooms and workshops, so as to form an opinion of the entire life of the inmates, and of the habits likely to result from it.

The capitation grant is not allowed on those children who are paid for by the Treasury, because the Act 17 & 18 Vict., cap. 86., sect. 3., enables the Lords of the Treasury to make a sufficient allowance for general care and maintenance in a single sum.

Their Lordships, following the analogy of the Act 17 & 18 Vict., cap. 86., sect. 2., have decided that no inmates of ragged or reformatory schools, who are above twenty-one years of age, are to be reckoned in calculating such allowances from the education grant as depend upon the number of inmates. Their Lordships do not regard it as advisable to associate persons who have reached mature years in crime with youths in one and the same reformatory.

My Lords intend, as a general rule, to refer those institutions in England and Wales which fall exclusively under the Minute of 2 June 1856 to such of Her Majesty's Inspectors as are charged with the inspection of Workhouse schools.

I have the honor to be, &c.
(Signed) R. R. W. Lingen.

To Her Majesty's Inspector of Schools.

Further Circular to Her Majesty's Inspectors of Schools, explanatory of Minute dated 2 June 1856, *as regards aid towards payment of Rent for Reformatories.*

Sir, Education Department, 21 November 1856.

In continuation of the instructions with which you have already been furnished respecting the administration of the Minute dated 2 June 1856, for the promotion of reformatory schools, I am directed by the Committee of Council on Education to request your attention to certain questions which have arisen under that part of the Minute which offers an allowance equal to half the rent of the premises.

The Committee ruled that no grants should be made for building reformatories. The experimental state of the whole subject of preventive and reformatory discipline afforded a sufficient reason for not sinking large sums of public money at once in undertakings which might have to be abandoned.

The rent contemplated by the Minute is such as a *bonâ fide* tenant pays to a landlord, in the ordinary course of taking and letting a house. But, in the application of this principle, two cases occur which are not free from difficulty.

1. The proprietors of suitable premises allow them to be occupied as reformatories without exacting the rent which those same premises might otherwise be made to yield.

2. Premises have been acquired, and settled in permanent trust, for which, although no rent is paid, and no one has the right to claim any, nevertheless the occupation of them as reformatories represents from year to year a certain value, under one of those heads to which the Minute purports to appropriate assistance.

The difficulty felt in departing from the literal sense of the Minute consists in the fact that, while an actual rent will naturally be kept as low as the

managers can contrive to make it, an estimated or nominal rent will be subject to an opposite tendency, inasmuch as the proportion of it, which may be recovered under the Minute, is not part of any positive expenditure, but is simply so much added to the general funds.

The experience of this Department proves incontestably that neither managers, nor even professional surveyors, confine themselves to market value in making estimates under such circumstances. The charitable object is held to excuse a degree of laxity which it is very difficult to control by any official check.

Their Lordships, looking at all the circumstances of the case, and wishing to interpret the Minute as liberally as is consistent with a *bonâ fide* observance of the limitations which it imposes, have agreed to the following rules of practice:—

1. *Where the premises are* NOT *conveyed in trust*, the managers can only obtain the allowance for rent by showing that they are bound under some lease, or valid legal agreement, to pay a specific amount; that such amount is annually paid by the treasurer, and that it duly appears in his accounts.

My Lords would consider it to be a reason for not allowing half the rent that the lessor had entered into any binding agreement to return it, inasmuch as such a step would relieve the managers from those prudential considerations which might otherwise induce them to limit the amount, as long as the lessor was at liberty to change his mind, or as long as his interest was liable to pass into other hands.

What the lessor may choose to do with the rent which he receives from time to time is his own concern only.

2. *Where the premises* ARE *held in permanent trust*, and cannot become the subject of any claim for rent, no estimated allowance will be made. The Minutes of the Committee of Council have never been allowed to have a retrospective force. Those promoters of schools who built them before 1833 have not been relieved by the subsequent Parliamentary grants from any part of the outlay which they had incurred; nor have such as performed the same public work between 1833 and 1853 derived any benefit from the more ample grants which have been available since the latter date. The managers who have acquired a reformatory in absolute possession, and so cannot now obtain the allowance for rent, are in no worse position than the persons just named, and cannot be differently treated.

I have the honor to be, &c.

(Signed) R. R. W. LINGEN.

Her Majesty's Inspector of Schools.

ELEMENTARY DRAWING.

At the Council Chamber, Whitehall, the 24th day of February 1857.

BY THE LORDS OF THE COMMITTEE ON EDUCATION, OF HER MAJESTY'S MOST HONORABLE PRIVY COUNCIL.

Read—A Minute by their Lordships, dated 26 January 1854, for the encouragement of Elementary Drawing ;—

Resolved—To cancel that Minute, and, in lieu thereof, to provide as follows :—

1. Pupil-teachers will be admitted to study and practise at any Drawing Schools in connexion with the Department of Science and Art, at a cost to themselves of only half the ordinary fees payable for instruction. (A.) Pupil-teachers.

2. Pupil-teachers, if attending such drawing Schools, will not be required to perform an exercise in Drawing at the annual examination of pupil-teachers before Her Majesty's Inspector, but will have another opportunity of being *examined in connexion with the Drawing School itself*, so as to obtain the prizes herein-after mentioned.

3. Pupil-teachers, if not attending such Drawing Schools, will have an opportunity of performing an *exercise in Drawing at the annual examination of pupil-teachers before Her Majesty's Inspector;* such exercise to be forwarded to the Committee of Council on Education, as part of the Inspector's Report, and, after revision in the Department of Science and Art, to be of the same effect in obtaining prizes as if it had been performed in connexion with the Drawing School pursuant to the last preceding paragraph.

4. Pupil-teachers, if not attending such Drawing Schools, but *permitted* (by arrangements between the managers of the schools in which they are apprenticed and the master of any such Drawing School) *to be annually examined there, instead of at the annual examination of pupil-teachers before Her Majesty's Inspector*, may obtain the same prizes as are offered in the two preceding paragraphs.

(B.) Students in training, Schoolmasters, and Schoolmistresses

5. *A memorandum of full competency to give instruction in Drawing* will be recorded in favour of those candidates only who have successfully performed each of the five exercises enumerated in the Schedule No. 1.

6. Drawing exercises will continue to form part of the general examinations, in December,* of candidates for certificates of merit.

7. Teachers already holding certificates of merit may either attend the December examinations at the training colleges before Her Majesty's Inspectors, in order to perform the exercises in Drawing, or they may make any arrangement which may be in their power for attendance at a Drawing School in connexion with the Department of Science and Art, in order to be examined there. Their exercises, whether worked at the December examinations or in connexion with the Drawing School, pass equally for revision to the Department of Science and Art; and it is matter of indifference whether the notice of success reaches the Committee of Council as part of the report upon the December examinations, or at any other time.

The payments mentioned in the following paragraphs are confined to certificated or registered teachers, and are independent of the prizes mentioned in Schedule No. 2.

8. Teachers conditionally entitled, as the holders of certificates of merit, to augmentation of salary, will receive, in

---

* In Scotland, June.

addition to such augmentation, the following annual payments, according to the exercises (*see Schedule No.* 1) which they may be registered as having passed in Drawing:—

a. Freehand (*first year*) - - - -	£2	Memorandum of full competency to give instruction in Drawing.
b. Linear geometry (*second year*) - -	1	
c. Linear perspective (*third year*) - -	1	
d. Model and object drawing (*fourth and fifth years*) - - - - -	1	

These several annual payments will be made *only as incident to* the augmentation grant, and will be subject, therefore, to all its condition.

Registered teachers in charge of apprentices will receive the same payments as incident (when allowed) to their gratuity for the special instruction of such apprentices.

If it should be reported to the Committee of Council on Education that undue preference were given to Drawing over other necessary branches of elementary instruction, or that Drawing were not made conducive to good writing, or that Drawing itself were not properly taught, these payments would be liable to be withdrawn.

9. If a certificated or registered teacher with apprentices hold a memorandum of full competency in Drawing, such teacher may (in addition to the sums mentioned in the last paragraph, and also in addition to the ordinary augmentation and gratuity) receive the sum of 1*l.* for every apprentice, up to a maximum of 3*l.*, who has been entirely instructed by such teacher in Drawing, and who satisfies the Department of Science and Art with his (or her) annual progress in exercises graduated according to the scale in Schedule No. 1. As to the time and place of examination in such cases, *see* paragraphs 2 and 3, *suprà*.

10. No student in training and no acting teacher, in those cases where they are respectively required to pass the general examination before Her Majesty's Inspector as for the end of the first year, may obtain a memorandum of competency in more than *two* of the branches enumerated in paragraph 8, at the same time.

Candidates (whether students or teachers) of the second year are not subject to the last preceding limitation.

11. Candidates (whether apprentices, students, or teachers) will not be required to pass again any of the exercises for which they may already have obtained prizes; but each exercise as it is passed successfully, at whatever stage of their scholastic career, will be duly registered as so much gained towards the memorandum of full competency mentioned in paragraph 8, and in the meantime will bear the corresponding

value as soon as the candidate has become a certificated or registered teacher.

SCHEDULE No. 1.

(C.) Exercises.

First Year.—Drawing freehand from flat examples.

Second Year.—Linear geometry by means of instruments.

Third Year.—Linear perspective by means of instruments, applied to geometrical figures, plane and solid.

Fourth Year.—Freehand drawing and shading from solid models.

Fifth Year.—Freehand drawing, and shading of natural forms and objects from memory.

SCHEDULE No. 2.

The prizes will consist of books, materials, and instruments calculated to be of use to the successful candidates in their further progress. A certain liberty of choice will be accorded to the candidates themselves, who, with the exercises, will be furnished with a list of the prizes, from among which they may mark upon their own exercise the particular prize they would prefer to obtain for it, if successful.

INFANT SCHOOLS.

At the Council Chamber, Whitehall, the 24th day of April 1857.

BY THE LORDS OF THE COMMITTEE ON EDUCATION, OF HER MAJESTY'S MOST HONORABLE PRIVY COUNCIL.

THEIR Lordships had under consideration the means of encouraging the special preparation of female teachers for infant schools, without thereby lowering the standard of attainment hitherto required from candidates for the office of teacher in girls' schools, or inducing the authorities of the training colleges under inspection to present those students principally for examination as teachers of infants who might appear to be the worst qualified to pass the examination prescribed for teachers of girls.

Resolved—To cancel the Minute dated 29 April 1854, and, in lieu thereof, to provide as follows:—

I. That no training college be admitted to the benefit of this Minute until Her Majesty's Inspector shall have reported, and their Lordships shall be satisfied, that it provides a separate and complete course of training for females intended to take charge of infant schools.

II. That the college authorities specify a maximum number, to be approved by my Lords, for the class in training for infant schools.

III. That Queen's scholarships of the second class be offered in the infant department to the following candidates; viz.:—

a. Pupil teachers who have been apprenticed to, and have satisfactorily completed their apprenticeship under, mistresses of infant schools.

b. Other candidates, not exceeding ten per cent. of the number specified under paragraph II., who must have completed the eighteenth year of their age, and must satisfy Her Majesty's Inspector that their manners and address are primâ facie suitable for dealing with very young children. Such other candidates must also show that they can—

1. Read an easy narrative with fluency, correct pronunciation, and intelligence.
2. Write simple sentences from dictation correctly.
3. Work easy sums correctly in the four first rules, simple and compound.

Her Majesty's Inspector will examine such other candidates at the training college *in January* of each year.

IV. That any ordinary female Queen's scholar, on entrance, be at liberty, with the consent of the college authorities, to join the class in training for infant schools, without prejudice to the value of her scholarship, but subject to the other consequences herein-after mentioned.

V. That students who are admitted by the college authorities, on payment of the usual fees or otherwise, into the class under training for infant schools, stand on the same footing as Queen's scholars in that class, as regards all the consequences herein-after mentioned.

VI. That the whole of the class under training for infant schools pass a special examination upon paper about *Michaelmas* in each year, according to the Schedule hereto annexed.

VII. That the papers worked be referred to the Inspector who is charged with inspecting the given training college.

VIII. That the Inspector attend at the training college, in the first week of *December* in each year, in order to report upon the skill exhibited by the same candidates in teaching and managing a portion of the model infant school in his presence.

The Inspector will also (at his discretion) examine each candidate orally, with special reference to the instruction of infants, in any of the subjects comprised in the written examination.

He will also hear the candidate read, and will note the correctness of her language in addressing children.

The candidate will also be expected to show, upon this occasion, such a knowledge of *Vocal Music* as will enable her to lead the infants in singing the ordinary hymns and school songs, and such a knowledge of *Drawing* as will enable her to illustrate Object Lessons on the black-board.

IX. That, after consideration of the Report of Her Majesty's Inspector, the candidates who appear to their Lordships to be qualified, and who have continued in the class under training for infant schools from the beginning of the year until after the Inspector's oral examination, be passed for service in infant schools only, and that grants be allowed on their account according to the following scale :—

CANDIDATES examined as Teachers in Infant Schools.

Grants.	First Class.	Second Class.
To the college - - -	£13 - - - -	£8;
To the candidate; while engaged in an infant school (only) under inspection.	Augmentation on the same terms as for other candidates of one year's training.	£8; and infant school under her charge may receive capitation grant pursuant to Minutes of 2 April 1853 and 26 January 1856.

Candidates admitted to the first class must (in addition to high merits in the peculiar qualifications of an infant school teacher) pass the written examination with credit. They will be allowed (in an infant school only) to receive pupil-teachers; but candidates in the second class will not be allowed to do so.

X. That no school be treated as an infant school in which there are children on the books of more than seven years old, or in which the instruction shall not be reported by Her Majesty's Inspector to be specially and exclusively adapted to children under that age.

XI. Teachers who were in charge of infant schools before the 29th of April 1854, and who have continued uninterruptedly in charge of such schools up to the time of their presenting themselves, may attend the examinations mentioned in paragraph VI.

The Minutes ordinarily applicable to annual grants from the Parliamentary Fund for Education apply (as a general rule) to grants under this Minute in all cases which are not otherwise provided for.

Schedule referred to in the foregoing Minute.

Written Exercises must be performed on the following subjects :—

1. *Holy Scriptures.*

One of the four Gospels, and the Acts of the Apostles.
Some historical portions of the Old Testament.
Church Catechism (*for Church of England Students*).

Additional for 1st Class.

One Epistle.

The Daily Morning and Evening Service (*for Church of England Students*).

In January of each year the portions of Scripture which are intended to form part of the examination will be specified.

2. *The Theory and Practice of Teaching Infants, and of Conducting an Infant School.*

3. *Lessons on Objects, Trades, Manufactures, and Domestic Economy.*

4. *Language.*

For 2nd Class.

Parts of Speech with Inflections.

For 1st Class.

Syntactical Parsing, Analysis of Sentences, and a simple Paraphrase.

5. *Penmanship.**

To write a specimen of the penmanship used in setting copies.

1. A line of large text hand. 2. A passage in small hand.

6. *Arithmetic.*

For 2nd Class.

First Four Rules, Simple and Compound, with Explanation of the Arithmetical Process in each case.

1st Class.

Practice, proportion, and Vulgar Fractions.

7. *Geography.*

1st Class only.

Europe and general outlines.

Map drawing, confined to British Isles and Palestine.

8. *Natural History.*

The human body. Common animals.

Common plants and minerals. Conditions affecting health.

9. *Sewing.*

Four hours will be devoted to the examination of the candidates in sewing and cutting out.

Evidence of the power of clearly and accurately presenting the first elements of knowledge to the minds of very young children will be especially required as a condition of success in the examinations.

---

* Sir, Whitehall, 24 May 1854.

I am directed by Viscount Palmerston to request that you will submit to the Committee of Council on Education, for their consideration, that one great fault in the system of instruction in the schools of the country lies in the want of proper teaching in the art of writing. The great bulk of the lower and middle orders write hands too small and indistinct, and do not form their letters, or they sometimes form them by alternate broad and fine strokes, which make the words difficult to read. The handwriting which was generally practised in the early part and middle of the last century was far better than that now in common use; and Lord Palmerston would suggest that it would be very desirable that the attention of schoolmasters should be directed to this subject, and that their pupils should be taught to imitate broad printing rather than fine copper-plate engraving.

I am, &c.

To the Secretary of the Committee of Council on Education. (Signed) H. Waddington.

PENSION TO MR. THOMAS TATE, LATE MATHEMATICAL MASTER AT KNELLER HALL TRAINING COLLEGE.

(No. 1.)

Letter from Rev. F. Temple, late Principal of Kneller Hall.

SIR, 8, Royal Crescent, Notting Hill, 29 March 1856.

I HAVE to request that you will bring under the notice of the Lord President that part of his Lordship's orders supplementary to the Minute of the 12th of May 1855, which relates to the promise of a pension to Mr. Thomas Tate, late mathematical master at Kneller Hall. Since the closing of that institution Mr. Tate has been employed, with the sanction of the Lord President, in assisting me to revise the official lists of scientific apparatus. That task is nearly completed, and his employment in that capacity will soon be no longer needed.

Mr. Tate has spent six-and-twenty years in the work of education. He was first a lecturer to evening classes at Alnwick; then to scientific institutions at Newcastle and York; then for ten years he served as mathematical master in the Battersea training school; and, for the last six years, he has acted in the same capacity at Kneller Hall.

He has published nineteen scientific treatises, of which only one can be said to have no direct bearing on elementary education, while sixteen make elementary education their sole aim.

Both as an author and as a teacher he must be considered to stand quite at the head of his profession. Most of his books are either in universal use, or are only displaced by others which owe their existence to imitations of his method. His pupils have been eminently successful, and would ascribe most of their success to his instructions. He has devoted his whole energies to the discharge of his duties, and his ability has been even more than equalled by his zeal. It would be difficult to find any man who in proportion to his opportunities had done so much for education in this country.

His health has suffered from his unremitting labours, and, even if Kneller Hall had been maintained, he could not have retained his position there much longer. He is not now capable of undertaking any duties which would require that close and continuous attention which is absolutely necessary for success in teaching.

I believe that any tribute to his merits from the Committee of Council would not only be a just reward to a very faithful servant, but would give great satisfaction to the great body of schoolmasters, among whom he is well known and deservedly respected.

Mr. Tate is in his fiftieth year.

I have the honor to be, &c.

To the Secretary of the Committee of Council on Education. (Signed) F. TEMPLE.

(No. 2.)

Observations by Rev. Canon Moseley, late one of Her Majesty's Inspectors of Schools, upon foregoing Letter.

I AGREE with Mr. Temple that any public ackowledgment which the Committee of Council may make of the merits of Mr. Tate, and of his services to the cause of education, would not only be a just reward to a very faithful servant, but would be accepted with gratitude by the great body of the elementary schoolmasters of this country, as a tribute to the honesty, the ability, and the fidelity of one whom they are accustomed to place at the head of their profession. Of the numerous useful works on education published by Mr. Tate, there are two the influence of which on elementary teaching has been remarkable. The one is his arithmetic, in which he first, of all the authors who have attempted it in England, succeeded in making arithmetic the "Logic of the People," by giving for the *rules* of arithmetic such *reasons* as it was possible to teach to poor children; and the other is his "Exercises in Mechanics," in which he first taught, under a popular form,

how by the common rules of arithmetic, and by geometrical construction with the scale and compasses, calculations in mechanics of great practical value may be made by persons who have no knowledge of mathematics. I have known him since he first became the lecturer in a training school, and I cannot but feel how immense the influence has been, not only of his writings or his labours as a teacher, but, of his *character* as a self-dedicated man, who has always thought first of his work and last of himself, and who by his fidelity, and his zeal and industry, offered to those under his care the model of that character of the teacher which it was his object to form in them.

(Signed) HENRY MOSELEY.

(No. 3.)

Letter to Mr. Thomas Tate.

SIR, Education Department, 17 April 1856.

THE Lord President directs me to inform you that he has advised the Committee of Council to award you an annual pension of 120*l.* (one hundred and twenty pounds) out of the Grant annually voted by Parliament for Education, in pursuance of the Minutes of 21 December 1846, whereby the general conditions of pensions to teachers are specified, and of 12 May 1855, relating to the discontinuance of the establishment at Kneller Hall.*

The Lord President believes that he cannot cause the grant of this pension to be announced to you in language that will be more gratifying to you than by making you acquainted with the terms in which Canon Moseley and the Rev. Frederick Temple have recommended it. I accordingly enclose copies of Mr. Temple's letter, and of Canon Moseley's memorandum thereon.

The Lord President will direct this correspondence to be entered on the Minutes of the Committee of Council, and to be printed in the annual volume.

Your pension will begin to run, in lieu of your salary as first assistant master, from the day on which Mr. Temple reports that you have concluded your labours with him in revising the Apparatus List.

The pension will be payable quarterly, in such manner as may be most convenient to you when you have determined on your residence.

I have the honor to be, &c.

Mr. Thomas Tate, Hounslow. (Signed) R. R. W. LINGEN.

---

* By a Minute of the Committee of Council on Education, dated 12 May 1855, it was referred (*inter alia*) to the Lord President to make equitable arrangements in respect of the students and officers of the establishment then about to be closed.

By certain supplementary regulations founded upon that Minute, the Lord President ordered that the first assistant master (Mr. Tate) should be pensioned under the Minute of the 21st of December 1846, as a special case.

Extract from Minute dated 21 December 1856 :—

Retiring Pensions to Schooolmasters and Schoolmistresses for long and efficient Services :—

" That a retiring pension may be granted by the Committee of Council to any schoolmaster or schoolmistress who shall be rendered incapable by age or infirmity of continuing to teach a school efficiently.

" Provided that no such pension shall be granted to any schoolmaster or schoolmistress who shall not have conducted a *normal* or elementary school for fifteen years, during seven at least of which such school shall have been under inspection.

" That in all cases of application for pensions a report shall be required from the inspector, and from the trustees and managers of the schools, as to the character and conduct of the applicants, and the manner in which the education of the pupils under their charge has been carried on.

" The amount of the pension shall be determined according to such report, but shall in no case exceed two thirds of the average amount of the salary and emoluments annually received by the applicant during the period that the school has been under inspection.

" A Minute of the grant of every such pension, and of the grounds on which it has been awarded, shall be published in their Lordships' Minutes."

INSTRUCTIONS TO INSPECTORS, &c.

PUPIL TEACHERS.

Circular to Her Majesty's Inspectors of Schools, as to Relations between apprenticed Pupil-Teachers and School Managers.

SIR, Education Department, 9 April 1856.

Pupil-teachers' subjection to Managers.

THE Committee of Council has repeatedly announced, in the most express and emphatic terms, that their Lordships do not interfere with the management of schools, and that pupil-teachers do not differ, in the degree of their subjection to the managers, from other scholars.

Their Lordships are not parties to the indentures of apprenticeship, but the whole engagement, with all its consequences, rests entirely between the managers, the teachers, and the apprentices.

The Lord President considers the action of the Committee of Council to be limited to ascertaining at the end of each year:—

1. Whether the school is in the prescribed state of efficiency.
2. Whether the apprentices pass the prescribed examination.
3. Whether they and their teachers produce the prescribed certificates of good conduct and attention to duty.
4. Whether, on a review of these particulars, certain grants are to be allowed.

My Lords refuse absolutely to entertain questions upon the details of management in the course of each year. If their Lordships were seriously dissatisfied they might refuse to admit additional apprentices, but they do not assume the decision of any particular case.

This general policy of the department is applied to Her Majesty's Inspectors by the earliest of the Minutes (24 September 1839) on the subject of inspection; and the Lord President wishes it to continue to be strictly observed.

The school of C.D. at E.F. is founded by a deed bearing date ———— 1847, and the management of the school (including expressly the selection, appointment, and dismissal of the schoolmaster and schoolmistress and their assistants) is thereby vested in ————.

To this body the decision of any question between the pupil-teachers and the master and mistress belongs, and neither the Committee of Council nor Her Majesty's Inspector has any right to review such decision.*

I have the honor to be, &c.

To Her Majesty's Inspector of Schools. (Signed) R. R. W. LINGEN.

Circular to Her Majesty's Inspectors of Schools, as to Time and Place for special Instruction of Apprentices out of School Hours.

SIR, Education Department, 14 March 1857.

Special instruction of pupil-teachers.

THE answers made to the questions marked in the enclosed paper on school management by the candidates for Queen's scholarships, who were examined before Her Majesty's Inspectors in December last, suggest that *the special instruction of the pupil-teachers out of school hours* is very greatly neglected.

The managers appear never, or rarely, to be present; the most common hours selected for the purpose are either between the morning and afternoon school, or at the end of the school-day; the place is not unfrequently the

---

* *See* Minutes of 1850–1, vol. 1, page xciii.

school-room, during times when it is being swept or cleaned, or while other children are dining or playing in it.

It would be worse than useless to attempt to regulate such details by official rules. The annual examination is the real safeguard for the result, and the means must be left, in the main, to the persons whom they most concern.

Nevertheless, it is important, both as matter of justice to the pupil-teachers themselves, and in order to conciliate the confidence of the class from which which they are drawn to the service, that the comfort and progress of the apprentices should be promoted by sensible and considerate arrangements.

The evils complained of result much more frequently from want of care and thoughtfulness than from deliberate motives.

I am, therefore, to request that you will take advantage of every convenient occasion to inform yourself respecting the actual practice in instructing the pupil-teachers out of school hours in each school which you visit. You should make a point of ascertaining what sort of instruction is given, *e.g.*, whether by hearing lessons, reading text-books together, looking over exercises, taking down notes, or making abstracts from books or from oral teaching; at what hours, in what place, and whether regularly.

It would be very desirable that you should note, under Remarks in page 2 of the Form No. X., any particulars of this kind deserving special notice.

In the annual reports also it is equally desirable that Her Majesty's Inspectors should digest, and specially comment upon, such facts.

The managers of schools should be urged to require *that a time be fixed* for the special instruction of the apprentices, and they should be reminded of the advantages of fixing this time (whenever possible) before the breakfast hour, or, if that cannot be managed, then at any hour rather than in the middle of the day.

In recommending apprentices for engagement, it is important for you to remember that the *distance of their homes* has a serious bearing upon their proper instruction out of school hours, and that a single apprentice may, from this cause, derange the instruction of a whole staff.

The most convenient time which circumstances permit being fixed for the lessons, *the managers should be urged to attend in person*, from time to time, without previous notice, to see that the arrangement is faithfully executed.

The Government has a right to expect that the large grants that are made from the Parliamentary fund will be turned to account by the necessary personal co-operation. Where such co-operation is not given, or continues to be insufficiently given, a reason exists for withdrawing public assistance from which no fruit can be expected.

You cannot too strongly insist, both with school managers and with school teachers, upon the instructions No. 3, page 19, in the Minutes of 1855–6.

My Lords look to your own personal communications, and to your own personal influence, as the means whereby improvement in these respects may be best effected. Beyond judging of the examination, and of the certificates, the Government cannot act directly. The abuses which there is reason to apprehend exist, notwithstanding these safeguards, can only be remedied by awakening the attention of managers and teachers to their duty.

I have the honor to be, &c.

(Signed) R. R. W. Lingen.

To Her Majesty's Inspectors of Schools.

CAPITATION GRANTS.

Circular to Her Majesty's Inspectors of Schools, relating to Half-time System of School Attendance as a condition of Capitation Grants.

Sir, Education Department, 21 June 1856.

I am directed by the Lord President, in consequence of representations which have been made to his Lordship, to direct your particular attention to the last paragraph in the Minute of 29 April 1854, whereby Half-time system.

provision is made for recognising a system of half-time in schools aided under the Minute of 2 April 1853, by accepting 88 instead of 176 whole days of attendance, as the condition of a capitation grant for boys over ten years of age who are instructed by a certificated schoolmaster, and who continue their schooling, after the commencement of labour, by some regulated alternation of lessons and of work.

The proprietor of a school, in which the system recommended by the Minute has been tried with fair promise of success, writes to the Lord President to state that the Inspector finds no other instance of the same kind in his whole district, and that, at a recent meeting of clergy and schoolmasters at the diocesan training college, not one person was found, beside the master of this particular school, who had any knowledge of the true meaning of the Minute. Such of the gentlemen present as had heard of the Minute at all took it to be a mere modification of the system of industrial schools, but did not understand that "ordinary labour" meant *labour away from the school under the common kind of employers.* It is this circumstance which characterizes the Minute, and my Lords had thought that the mention of "half-time" could not fail to convey the intended meaning.

You will find the question further illustrated in the Minutes of 1855–6, pp. 35–6.

The point becomes of greater importance now that the capitation grants are extended to the whole country. By the original Minute of 2 April 1853, "the children attending factories and printworks under any Statute were to be counted as fulfilling the condition of capitation grants, if they complied with the requirements of the particular Acts," and the Minute of 29 April 1854 must now be taken to be supplementary to those Acts, not only as heretofore, in the rural districts, but, in all parts of Great Britain whatever.

The Lord President wishes you to take pains to make the scope of this Minute known. The experiment requires personal address and activity on the part of the managers of schools, in conciliating and settling terms with the employers of labour; but, in the way of expense for material appliances, it costs nothing,—therein contrasting very favourably with the system of school farms and workshops; while, further, it affords the advantage of that truth and reality in industrial training which the arrangements of a school may imitate, but, can never accomplish in the same degree as actual work for wages.

The Lord President watches with much interest the result of putting this Minute in operation.

I have the honor to be, &c.

To Her Majesty's Inspector of Schools. (Signed) R. R. W. Lingen.

CERTIFICATED TEACHERS.

Circular to Her Majesty's Inspectors of Schools, as to Engagement of Teachers direct from Training Colleges at Christmas, though School-year may not end in December or January.

Sir, Education Department, 14 August 1856.

Engagement of teachers from training colleges.

I am directed to request your attention to the enclosed copy* of a notice, which is forwarded with every indenture from this Office, for the apprenticeship of a pupil-teacher.

---

* Committee of Council on Education, June 1855.

The teacher is requested to take notice, before executing this indenture, that the annual gratuities offered by the Minutes of the Committee of Council on Education, for the instruction of this apprentice, will be paid on the same terms as the grants in augmentation of the salaries of certificated teachers, that is, they well be considered to be due for whole years only, and no fractional parts of them well be paid to any teacher who voluntarily quits the charge of this apprentice before the end of each year in respect of which such gratuities are severally due.

It has been found by experience that the pupil-teachers require to be protected by such a guarantee for their continuous instruction.

The years in respect of which the gratuities mentioned in the notice are severally due end according to the month fixed for the inspection of each school. Thus, if August be the month fixed for the inspection of a school, all annual grants to that school are paid for years ending 31 July inclusive.

It has been represented to my Lords by persons of experience in the management of schools under inspection, that, however useful this rule may be in securing the instruction of pupil-teachers from interruption between one examination and another, and generally in discouraging the excessive fluctuation of teachers from school to school, nevertheless, the rule does not accord with the date at which the greatest number of new teachers becomes annually available for the supply of vacancies.

This latter date is necessarily fixed by the Christmas examinations held at the several training colleges under inspection, in order to pass students for the end of their first or second years of residence, as a preliminary to their becoming certificated teachers.

It would not be true to say that certificated teachers can only be procured at this one particular time, because a glance at the advertisement sheets of any of the periodicals on education suffices to show that such teachers are always to be obtained. Undoubtedly, however, the supply is greater soon after the general examinations; and, as often as the managers of schools are willing to take advantage of this supply, they should meet with nothing to discourage them in doing so.

If the managers of a school in receipt of annual grants for years ending (say) in August agree with their teacher to leave immediately before the Christmas holidays; and if they also agree with a duly qualified successor to take his place from one of the training colleges under inspection immediately after those same holidays; my Lords will allow a proportionate augmentation and a proportionate gratuity to the outgoing teacher for his services from August to the end of the month in which he leaves the school.

My Lords would not consider any successor to be duly trained who had not already passed his or her examination for the end of the first year. As the result of each Christmas examination cannot be known much before Easter, the relaxation may include all students who, on the previous occasion, had passed for the end of the first year; but it will not include such students as may then be sitting for the end of the first year, and who are not yet sure of obtaining the preliminary qualification for any certificate whatever. In addition to this reason, it is not desirable to encourage students to leave college at the end of their first year.

The relaxation is limited to those cases in which the successor comes direct from a training college after the Christmas examination, and assumes the charge of an elementary school without any interval after its ordinary Christmas holidays.

The proportionate payment is to be considered an exception to the general rule, and each case must be made the subject of a special application by the managers. If the application be entertained, the correspondent will be directed to enter the particulars in the usual part of the Form IX. when he receives it from you, previous to your visit of inspection, and to bring the subject specially under your notice at the time. The proportionate grant will be allowed on your report, together with the other payments due to the school.

A copy of this circular has been sent to each of the training colleges under inspection.*

I have the honor to be, &c.
(Signed) R. R. W. Lingen.

To Her Majesty's Inspector of Schools.

---

* In *Scotland* the annual examinations of candidates for certificates of merit are held in *June;* and, in applying this circular to that part of Great Britain, the dates must be read *mutatis mutandis.*

COLLECTIVE EXAMINATIONS.

Extract from Instructions to Her Majesty's Inspectors of Schools, dated 5 December 1856, as to surreptitious Copying at Examinations.

Penalty for surreptitious copying.

"I AM to request that you will peruse the Minutes of 1851–2, vol. 1, pp. 119–124, and that, on the first occasion of meeting the candidates, you will explain the purport of that correspondence, dwelling on the fact that the penalty applies equally to those who give or receive clandestine assistance.

"My Lords have received information which leads them to think that instances of copying and of unfair assistance (by the introduction of books, and by application to other candidates), during the examinations for certificates of merit, have not been so uncommon as they would willingly have supposed.

"You will state, therefore, in addition to the caution which you have already been directed to communicate, that proved complicity of any kind or degree whatever, in dishonest conduct of this description, will be visited with the same penalty as the direct form of the offence.

"You should call upon the candidates to co-operate with you in exposing any such instances of fraud.

"You will also be good enough to explain to them that, as all the papers on the same subject are read over together, there is little or no chance that delinquency of this kind will escape detection.

"You will, at the end of the examination, transmit a list of names, in the *order of sitting*. Such a list is often wanted in deciding upon cases of copying. This also you should explain.

"The penalty (three years exclusion from any recognition by the Committee of Council) will be inflicted with the same uniformity as heretofore. It has never yet in a single instance been waived or remitted, nor will it be so in such cases as may for the future occur.

"Several embarrassing questions have arisen with regard to matter written upon blotting-paper. In cases where the presumption of fraud has been strong (*e. g.* where the fifth proposition from the first book of Euclid has been found written on the blotting-paper in pencil), the candidate has urged that he had written out the proposition in this manner in the course of practising himself before the examination, and that he had never thought of it in bringing the blotting-paper with him.

"However improbable this and similar tales may be, it is next to impossible for a department which is administrative only, and which has no pretence to be judicial, to act penally upon any evidence short of such as enforces confession of the fact. The remedy, therefore, must be sought in prevention.

"A supply of blotting-paper is always provided among your stationery, and you will be good enough to give a sheet of it to each candidate at the commencement of the examination, for use during the whole of it. You will inform him that he must *leave this* blotting-paper in his place at the end of each sitting, and that he must *bring none other* into the room. You will strictly forbid the use of blotting-paper for rough drafts, or for any writing thereon whatever, under pain of immediate expulsion. Proper paper for making rough drafts (a practice by no means to be encouraged) is provided for those who require it in your supply of stationery."

DISQUALIFICATION FOR TEACHERS.

Circular to Her Majesty's Inspectors of Schools, as to Physical Disqualification in Candidates for Office of Teacher.

SIR, Education Department, 13 January 1857.

Physical disqualification for office of teacher.

I AM directed to request your attention to the words marked in the enclosed form (No. XX.), and to the corresponding rule, which has always been acted upon in the case of candidates for apprenticeship as pupil-teachers (*vide Pupil-teachers' Broad Sheet.*)

My Lords had been under the impression that the rule was understood to apply to *all candidates* for the office of teacher in elementary schools for the poor; but, as instances have occurred to show that this understanding has not always been acted upon in the admission of *students into training*, and as the recent Minute of the 2nd of June 1856 renders it likely that a much larger class of students than heretofore will be drawn from candidates who have not been pupil-teachers, it becomes of importance to leave no room for doubt as to the application of the rule.

Their Lordships consider it of the highest importance not to exhibit the office of schoolmaster to the labouring classes as one marked out for those who are disqualified for other employments.

My Lords regard this general reason as paramount over that consideration which, in many other employments, naturally and properly overlooks bodily defects in combination with great abilities and attainments. The class of teachers, however, in schools such as those under inspection, have objects to fulfil and duties to perform beyond those of mere scholars, however accomplished and interesting; and it is, moreover, quite certain that admissions (if the rule were once relaxed) could not be confined to persons of more than average attainments, but would result in the abandonment of most of the importance which is now attached to physical qualifications.

Such few exceptions as have been admitted in the administration of the Minutes of the Committee of Council had either escaped attention until they could not be excluded without injury to individuals, or else had the justification of long service on the part of the applicants.

Henceforth Queen's scholarships will not be awarded to, nor grants at the end of the year allowed for, students admitted after this notice, *who would not have been eligible as pupil-teachers under the rule to which your attention is directed.*

I have the honor to be, &c.
(Signed) R. R. W. Lingen.

To Her Majesty's Inspector of Schools.

Extract from Form XX. *annexed to foregoing Circular.*

Report on Qualifications of Candidates for Certificates of Merit.

Instruction of a Class in the Presence of the Inspector.

Candidate's health (apparent).
Height (apparent).
Physical strength (apparent).
Manner.
Energy as a teacher.
Whether free from lameness?
Whether has lost any limb?

Her Majesty's Inspector of Schools.

Extract from Broad Sheet referred to in foregoing Circular.

"Candidates must not be subject to any bodily infirmity likely to impair their usefulness as Pupil-teachers.

"Their Lordships have decided that the following interpretations are to be put upon this condition:—A constitutional infirmity, such as scrofula, fits, asthma, deafness, great imperfections of the sight or voice, the loss of an eye from constitutional disease, or the loss of an arm or leg, or the permanent disability of either arm or leg, curvature of the spine, or an hereditary tendency to insanity, are to be regarded as positive disqualifications."

CORRESPONDENCE, &c.

MANAGEMENT.

As to Right of Management over Schools.

Extract:—

"In reply to your letter, I am directed to inform you that the Committee of Council on Education never interferes with the management of schools which are in operation.

"If a school be legally secured in trust, the rights of every one connected with it depend upon the deed of foundation. If a school be not legally secured in trust, the owner of the building can prescribe what terms he pleases to those whom he allows to come upon the property.

"As apart from one or other of these sources of authority, neither the clergyman of the parish nor the schoolmaster has any right in the school definable *ex officio*.

"The question simply is—who are the trustees, managers, or proprietors? The decision rests with them."

QUEEN'S SCHOLARS.

As to Dismissal of Queen's Scholars from Training Colleges.

"The admission and dismissal of every individual student, whether a Queen's scholar or not, rests exclusively with the college authorities.

"The Committee of Council requires that the reasons for dismissing a Queen's scholar should be stated, not for the purpose of interfering with that particular case, but, as part of the data upon which, in connexion with the reports of Her Majesty's Inspectors. Their Lordships satisfy themselves, from year to year, that each particular college is sufficiently well suited for the reception of students who are to be trained for the office of schoolmaster at the public expense."

CAPITATION GRANTS.

(No. 1.)

Calculation of School Fees in fulfilling Condition No. 3 in Minute of 2 April 1853.

Extract:—

"When several children of the same family are admitted at different fees, the sum total of the fees may be divided by the number of the children, to give what may be considered the fee paid for each child."

(No. 2.)

As to Rule for removing Names from School Registers.

Sir, Education Department, 3 May 1856.

In reply to your letter, I am directed to inform you that my Lords do not found the award of any grants upon the number of scholars returned as upon the register.

Nevertheless, the point to which you have adverted is one of considerable importance in regard to the general statistics of education.

The number of scholars returned by the Registrar-General as *on the books* of day-schools in England and Wales is 2,144,378, but the number found

present, on 31 March 1851, was only 1,786,324. All the per-centages, however, of scholars to population are calculated on the former number, and the fact which you mention, respecting the different calculations adopted in your own and the next adjoining parish, shows how large a margin there is for uncertainty.

My Lords think the form which you recommend highly useful to be kept, but they are obliged to proceed with caution in adding to the heads under which official returns are called for; the subject of school accounts being at present new, and the persons who have to make them being charged with many other onerous duties.

With regard to the removal of a child's name from the register, the following plan might answer most practical purposes:—

The principal teacher, on entering a new name in the admission register, should always call for the class-register on which the child is to be borne, and should enter the name therein himself.

The class-registers should all be delivered to the principal teacher of the afternoon school on Friday, in order that he may make up from them his own summaries of the whole school.

If any child has been absent during the whole of the week, inquiry should be made of the parents, and, if an intention appears of discontinuing the child's attendance, the name should be removed. It appears to my Lords to be impossible to define generally what would be the proof of such an intention. In each instance it would probably be apparent enough whether the parents considered the schooling practically over, or meant to go on with it, and the name should be retained or cancelled accordingly. My Lords do not think that any name should be borne on the register more than a fortnight *without inquiry* as to the cause of absence, nor more than two months (under any circumstances whatever) *without actual attendance*. After such an interval, or after a formal withdrawal, a child should be entered afresh if he returns to school.

I am directed to thank you for your communication, which will be borne in mind.

I have the honor to be, &c.

(No. 3.)

Teachers' Participation in Capitation Grant.

Sir, Education Department, 22 January 1857.

I am directed to inform you, in reply to your letter of the 20th instant, that the grants commonly known as capitation grants belong to the managers.

Individual teachers have no claim whatever upon the capitation grants, as distinguished from any other money in the hands of the managers.

At the same time my Lords would not disapprove of an arrangement whereby the teacher was given some interest in obtaining the capitation grant, *e.g.*, a per-centage upon it in addition to the salary otherwise assured to him. Any such plan, however, both in principle and detail, rests exclusively upon the discretion of the managers.

I have the honor to be, &c.
(Signed) R. R. W. Lingen.

MIDDLE SCHOOLS.

*Education Grant not applicable to Schools for Middle Classes.**

SIR, Education Department, 13 June 1856.

I HAVE submitted your letter of the 12th ultimo to the Lord President of the Council.

His Lordship thinks you will agree with him that the labouring classes who are dependent upon ordinary wages, and who do not employ capital, are the primary objects to be considered in the administration of the Parliamentary grant for education, and that, as a necessary consequence from this principle, no school ought to share in that grant to which by the terms, pecuniary or other, of admission, those same classes have not practically the means of sending their children.

With regard to that class which, as small farmers, small shopkeepers, small tradesmen of whatever kind above the class of journeymen, or lastly, as foremen and highly skilled artisans, forms the stratum of society next above the labourers, properly so called, the Lord President is not of opinion that the education of their children should be separated from that of the children of the labourers by any act on the part of the State.

There is no subject of instruction proper for the children of this lower middle class to learn from which the children of the labourers ought to be excluded, provided the parents of the latter are able and willing to keep them long enough at school. It is in this latter respect, duration of attendance, and not in a separate order of schools, that the children of the lower middle class should be taught to look for the maintenance of their advantages in the future competition of life.

The Lord President thinks that a system of secondary schools might with great advantage be added to the present system of primary schools, in all those localities where schools of the latter kind are sufficiently large, or sufficiently numerous to afford a supply of children who have mastered the common elements of instruction, and are prepared to proceed with more specific studies. Schools of this secondary kind are beginning to be established in different parts of the country under the name of Trade Schools, the instruction being generally directed towards the application of science to productive industry.

I have the honor to be, &c.

(Signed) R. R. W. LINGEN.

* *Vide* Correspondence in Minutes of 1852–3, p. 61.

NOTICES, &c.

EDUCATIONAL MUSEUM,

Under the Charge of the Lords of the Committee of Privy Council on Education; Cromwell Road, South Kensington.

1. To aid all classes of the public in carrying out the work of National education, and especially those engaged in teaching, the Lords of the Committee of Privy Council on Education have arranged to establish at the new buildings at South Kensington, a Museum which will exhibit under a proper classification all important books, diagrams, illustrations, and apparatus connected with education, already in use or which may be published from time to time, either at home or abroad.

2. It is proposed that the Museum shall be opened to the public next spring. The public will be admitted free to the museum as a public exhibition on certain days of the week; and on other days, which will be reserved for students, opportunity will be given to examine and consult the objects.

3. The objects exhibited at St. Martin's Hall in 1854, which were presented to the Society of Arts, and by that Society given to the Education Board in order to found a museum, will form part of the Educational Museum. The producers of apparatus, books, diagrams, maps, &c., used in teaching will have the privilege—subject to certain regulations—of placing their publications and productions in the Museum, and thus making them known to the public. A catalogue will be prepared which will contain the price lists which exhibitors may furnish for insertion.

4. The books and objects will be grouped under the following divisions:—

1. School buildings and fittings, forms, desks, slates, plans, models, &c.
2. General education, including:—
   - *a.* Reading.
   - *b.* Writing.
   - *c.* Grammar.
   - *d.* Arithmetic.
   - *e.* Mathematics.
   - *f.* Foreign languages.
   - *g.* Histories.
3. Drawing and the fine arts.
4. Music.
5. Household economy.
6. Geography and astronomy.
7. Natural history.
8. Chemistry.
9. Physics.
10. Mechanics.
11. Apparatus for teaching the blind and the deaf and dumb.

5. In organizing the Museum, the Committee of Privy Council on Education hope to have the co-operation of all who are interested in the object.

All communications relating to Museum may be adressed to the Secretary of the Department of Science and Art, Cromwell Road, South Kensington, care of Mr. Richard Thompson, Superintendent of the Museum.

Regulations for the Guidance of Contributors to the Educational Museum.

Cromwell Gardens, South Kensington,
2 February 1857.

1. The Museum will be open free to the public, on Mondays, Tuesdays, and Saturdays; and on Wednesdays, Thursdays, and Fridays, to students and the public generally, on payment of 6*d.* each, or a subscription of ten shilling a year or five shillings a quarter, payable in advance.

2. Contributions forwarded for exhibition will be classified and arranged by the officers of the Musuem.

3. Exhibitors will be requested to attach descriptive labels giving the names, uses, &c., to their contributions; the size and form of such label to be hereafter determined.

4. It is desirable that the usual retail price should be distinctly marked on all articles sent for exhibition.

5. As it is the wish of the Committee of Privy Council on Education, and the evident interest of exhibitors, that the Museum should at all times represent the then existing state of educational appliances, every facility will be given for the introduction of new inventions, books, diagrams, &c., relative to education.

6. Books, and other educational appliances out of date, or the utility of which may have been superseded, or articles that may have become injured, may be removed or replaced at the option of the exhibitor.

7. To prevent confusion, and the possibility of articles being removed by persons not properly authorized by the exhibitor, due notice in writing of the intention to remove articles must be given, and no book or object is to be removed until it has been exhibited at least twelve months.

8. In order to protect the property of exhibitors, no article will be allowed to be removed from the Museum without a written authority from the superintendent.

9. On Wednesdays, Thursdays, and Fridays, the books and other objects in the Museum will be open to students and to the public, for inspection and study, under such regulations as are usually found convenient in a public library.

10. A catalogue will from time to time be published, so so as to keep pace as much as possible with the additions to the Museum, and the withdrawals from it.

Notification of New Appointments.

VICE-PRESIDENT OF EDUCATION COMMITTEE.

(Copied from London Gazette of 6 February 1857.)

Whitehall, February 5, 1857;

The Queen has been pleased to appoint the Right Honorable *William Francis Cowper*, to be Vice-President of the Committee of Council on Education.

INSPECTORS OF SCHOOLS.

(Copied from London Gazette of 29 July 1856.)

At the Court at Osborne House, Isle of Wight, the 28th day of July 1856;

Present—

The Queen's most Excellent Majesty in Council.

Her Majesty in Council was this day pleased, upon a representation of the Right Honorable the Lords of the Committee of Council on Education, to appoint the Reverend *Robert Edgar Hughes*, M.A., Fellow and Tutor of Magdalene College, Cambridge, to be one of Her Majesty's Assistant Inspectors of Schools.

(Copied from London Gazette of 27 February 1857.)

At the Court at Windsor Castle, the 7th day of February 1857;

PRESENT—

The QUEEN'S most Excellent Majesty in Council.

Her Majesty in Council was this day pleased, upon a representation of the Right Honorable the Lords of the Committee of Council on Education, to appoint the Reverend *Thomas Wetherhead Sharpe*, M.A., Fellow of Christ's College, Cambridge, to be one of Her Majesty's Assistant Inspectors of Schools.

(Copied from London Gazette of 24 March 1857.)

At the Court at Buckingham Palace, the 20th day of March 1857;

PRESENT—

The QUEEN'S most Excellent Majesty in Council.

Her Majesty in Council was this day pleased, upon a representation of the Right Honorable the Lords of the Committee of Council on Education, to appoint *Charles Henry Alderson*, Esquire, B.A., Barrister-at-law, late Scholar of Trinity College, Oxford, and *John Reynell Morell*, Esquire, to be two of Her Majesty's Inspectors of Schools; and the Reverend *Benjamin James Binns*, B.A., late Principal of the Caernarvon Training College, to be one of Her Majesty's Assistant Inspectors of Schools.

(Copied from London Gazette of 3 April 1857.)

At the Court at Buckingham Palace, the 2nd day of April 1857;

PRESENT—

The QUEEN'S most Excellent Majesty in Council.

Her Majesty in Council was this day pleased, on a representation of the Right Honorable the Lords of the Committee of Council on Education, to appoint *William Scoltock*, Esquire, M.A., of Christ Church, Oxford, to be one of Her Majesty's Inspectors of Schools.

(Copied from London Gazette of Friday, 8 May 1857.)

At the Court at Buckingham Palace, the 6th day of May 1857;

PRESENT—

The QUEEN'S most Excellent Majesty in Council.

Her Majesty in Council, on a representation of the Right Honorable the Lords of the Committee of Council on Education, was this day pleased to appoint *David Middleton*, Esquire, A.M., to be one of Her Majesty's Inspectors of Schools in Scotland; and *David Munn*, Esquire, Mathematical Master in the Dumfries Academy, to be one of Her Majesty's Assistant Inspectors of Schools in Scotland.

MEMORANDUM.

A period of eighteen months from the date of each award is allowed for claiming the payment of Building Grants. Grants for improvement or enlargement may be claimed within nine months from the date of the award. Beyond these periods the Committee of Council does not hold itself responsible for payments. From this arrangement it results that a great proportion of the grants for building, enlargement, or improvements, *paid* in each year, was *awarded* in preceding years. *See two following Tables.*

The following Explanatory Table (II. *b*) includes all the Building-Grants *paid* between 1 January 1856 and 31 December 1856, whether awarded before or within that period.

EXPLANATORY TABLE.

*** The Parliamentary Estimate for Building-Grants, in each year, is calculated with reference to the three foregoing Explanatory Tables.

(No. III.)

SUMMARY of GRANTS awarded in aid of purchase of BOOKS and MAPS, and DIAGRAMS, at reduced prices,—*in Year ended* 31 *December* 1856.

Denomination of Schools.	Number of Schools.	Amount of Grants. £	s.	d.
National, or Church of England, Schools	590	2,008	4	2¼
British, Wesleyan, and other Protestant Schools *not* connected with Church of England	173	631	3	8¼
Roman Catholic Schools	48	193	15	11½
Industrial Reformatories	1	4	3	4
Schools in Scotland connected with Established Church	85	288	19	4¼
Ditto - ditto Free Church	72	286	7	1¼
Ditto - ditto Episcopal Church	11	24	18	7½
Total	980	3,437	12	3

Note.—There are 122 schools not included in the above summary (viz., 44 Church of England, 41 Protestant Dissenting, 6 Roman Catholic, 14 Established Church of Scotland, 11 Free Church, 1 Episcopal Church, and 4 Colonial Schools, and 1 Mechanics' Institute), which have obtained *orders to purchase* books, maps, and diagrams, without the assistance of any Grant. The total value of the works procured through the Committee of Council on Education amounts to 13,487*l.* 13*s.* 8*d.*; which amount is thus made up:—

	£	s.	d.
Grant from Parliamentary Vote	3,437	12	3
Local Contributions	10,050	1	5
Total	£13,487	13	8

(No. V.)

TABLE No. IV re-arranged, to show Number of CERTIFICATED TEACHERS, Number of ASSISTANT TEACHERS, and Number of PUPIL-TEACHERS, employed in teaching on 31 December 1856, *classified denominationally*;—with Table showing Number of Schools aided by CAPITATION GRANTS, Amount of Grants, Number of Scholars on whom Grants were allowed, Number of Scholars in average Attendance in those Schools, and Centesimal Proportion of Scholars on whom Grants were allowed to Number of Scholars in average Attendance; *for Years* 1854 *and* 1855, *and for Year* 1856.

*** *It is to be noted that, since* 1 *July* 1856, *the Capitation Grant, which had been previously confined to Schools in the rural districts and in the smaller unincorporated towns, has been extended to the whole of England and Wales. The increase of the expenditure during* 1856, *as compared with that of the two preceding years, is accounted for partly by this fact and partly by the more general diffusion of information respecting the assistance to be obtained.*

Schools connected with	Number of Certificated Teachers.		Number of Assistant Teachers.		Number of Pupil-Teachers.		Capitation Grants. From 1 Jan. 1854 to 31 Dec. 1855 (two years).					From 1 January to 31 December 1856.

* These were Exhibitioners under a temporary arrangement, now terminated.

(No. VIII.)

Summary (under Counties) of all **Sums** expended from **Parliamentary Grants** for **Elementary Education**, in **Great Britain**,* between Years 1833 and 1856 inclusive.

*** The Population is not given, because *the Counties in the Census Tables* are not identical with *the Counties of the Map*. The difference is sometimes considerable. Schools under inspection are necessarily grouped *according to the Counties of the Map*.

* The returns for these years *do not* distinguish the ages of children under eight years.

† The increasing per-centage is partly, perhaps principally, accounted for by the *greater number of infant schools* which have been established under inspection. This fact will be apparent in comparing the per-centages of 1855 with those of 1856, under seven years of age. Children are now sent to school at an age earlier than that at which they were sent in former times; and this raises the general per-centage of children under ten years of age although *the average age up to which attendance is continued* may remain the same as before. Tables are in course of preparation, and will be published in the volume of next year, showing the *comparative* annual numbers of children above ten years of age *in schools which have been inspected continuously from* the year 1850.

(No. X.)

* Extract from the Report of the Registrar General, on the Census of 1851, p. xxiii., with reference to Education:—

"*Children of the labouring classes are employed at an early age,—some permanently, others temporarily,—at a rate of recompence which, though apparently but trifling, is sufficient for their maintenance, and more than sufficient to induce their parents to remove them from School. It is evident that even the lowest amount of wages which the child of a labouring man will receive (from 1s. 6d. to 2s. per week) must be so great a relief to the parents as to render it almost hopeless that they can withstand the inducement, and retain the child at School in the face of such temptation. And this inducement will be almost equally powerful whether or not the School be one where payments from the children are required. It is, not for the sake of* saving a penny *per week, but, for the sake of* gaining a shilling or eighteenpence *per week, that a child is transferred from the School to the factory or the fields; and the mere opportunity of saving the penny by sending the child to a* free school *would not restrain the parents from making a positive addition to their weekly income, if the absence of the child from School could ensure it.*"

(No. XV.)

DETAILED STATEMENT (under Counties) of sums expended from Parliamentary Grants for Education in Great Britain, in BUILDING, ENLARGEMENT, IMPROVEMENTS, or FIXTURES of Elementary Schools; in SCIENTIFIC APPARATUS, and in BOOKS, MAPS, and DIAGRAMS; in AUGMENTATION of SALARIES of CERTIFICATED SCHOOLMASTERS and SCHOOLMISTRESSES, and in RETIRING PENSIONS to late TEACHERS of SCHOOLS under INSPECTION; in STIPENDS of ASSISTANT TEACHERS; in STIPENDS of PUPIL-TEACHERS, and GRATUITIES for their special instruction; in CAPITATION GRANTS; and in GRANTS to REFORMATORIES, and to SCHOOLS of INDUSTRY for industrial purposes;—between years 1833 and 1856, inclusive.

*** *Grants awarded by the Lords of Her Majesty's Treasury (prior to the appointment of the Committee of Privy Council on Education) are marked with an asterisk.*

ENGLAND.

NOTE.—N.S. denotes that School is in connexion with the *National Society*, or with the *Church of England*; B.S., with the *British and Foreign School Society*; Wes., *Wesleyan Methodists' Conference*; R.C., *Roman Catholic Poor School Committee*; Par., that it is a *Parochial* School; and P.U., a *Parochial Union* School.

Name and Denomination of School.	Grants for Building, Enlargement, Improvements, or Fixtures.		Grants for Apparatus, Books, Maps, and Diagrams.	Grants to Certificated Teachers, and for Retiring Pensions.	Grants on account of Assistant Teachers.	Grants on account of Pupil-teachers.	Capitation Grants.	Grants to Reformatory and Industrial Schools

REPORTS ON ELEMENTARY SCHOOLS.

GENERAL REPORT, *for the Year* 1856, *by Her Majesty's Inspector of Schools, the* Rev. F. C. COOK, M.A., *on the* CHURCH OF ENGLAND SCHOOLS *inspected in the County of* MIDDLESEX.

MY LORDS, December 1856.

IN the course of last year, 131 boys' schools, 131 girls', 89 infants', and 14 mixed, were visited by myself and my colleagues, the Rev. J. G. C. Fussell and the Rev. F. Temple. The total number of children present at the examinations was 16,530 boys, 11,790 girls, 10,934 infants, 1,227 boys and girls mixed,—in all, 40,181. By far the greater number of these schools were inspected by Mr. Fussell. The schools in Islington and Hackney, two parishes in which the efforts of the parochial clergy and other promoters of education have produced very satisfactory results, were inspected by Mr. Temple. My other official engagements made it impossible for me to inspect more schools than those of which a separate account will be given in the Tabulated Reports. These schools are all situated in Middlesex, and nearly all of them in London and the suburbs. The very few schools in small agricultural parishes included in those returns do not materially affect the statistical results. I have no doubt that the state of education in those parishes where good parochial schools are established is represented very fairly by the tabular statements in the appendix to this report. The conclusions which they indicate are of a very mixed character. On the one hand, it is obvious that a small proportion of the population of the metropolis, within the age of two and fifteen years, are enjoying the advantages of such an education as is now provided in schools receiving annual grants from your Lordships. On the other hand, they prove a steady increase in the number of schools under inspection, and a progressive improvement in the character of the instruction. It may, moreover, be confidently anticipated that the extension of the capitation grant to towns and cities will in a few years bring nearly all schools of ordinary efficiency under the operation of the same system, and have also a material effect in encouraging regular attendance, as well as in supplying deficiencies either in their organization or management. I have ascertained in several schools that a considerable effect has already

General Remarks on schools in district of inspection.

been produced upon managers and parents, and that there is every reason to expect that a larger proportion will be annually entitled to these payments. I know of no way in which assistance could be given so calculated to secure the most important results. It has the singular advantage of an accurate adjustment between a work really done and its appropriate reward. For every five shillings paid at the end of the year, one boy has actually received regular instruction in a well-appointed school, while the managers and teachers are stimulated to exertion in every way, especially in looking up the cases of irregular attendance. It is objected to this system that it conveys the public money in the first place to parishes, which do not need, or ought not to need, any assistance. But it must be remembered that the amount so paid bears but a small proportion to the total expenditure. It can seldom be claimed for more than one-third of the children in attendance, and the average expense actually incurred for boys, girls, and infants is 1*l.* 6*s.* 9½*d.* Taking, therefore, any one school, in the more opulent parishes of London, for an example, the expense to the school fund would be about 1*l.* 10*s.*, and the capitation payment, 1*s.* 6*d.*, that is $\frac{1}{20}$ of the amount. It puts the Government in fact upon the footing of an annual subscriber to an amount, which gives a certain right of advice and superintendence—a right only exercised under well-defined limitations – but which certainly involves no grave financial considerations. It is a welcome addition to the income of the best appointed schools, sufficient to encourage increased liberality in dealing with questions of apparatus, and, more especially, in raising the salaries of teachers, while, to the great majority of schools, it supplies just what was required to complete their organization, and so save them from pecuniary embarrassments. I have found that this system tells very much upon my examinations. I usually desire the teachers to separate the children in every class for whom the capitation grant is claimed. This at once throws a strong light upon one of the first conditions of tolerable instruction,—the regularity of the attendance; and by the assistance of the registers, the pupil-teachers, and the masters, it is not difficult to ascertain exactly those facts which are requisite to form a just estimate of the efficiency of the instruction, and the progress of individual pupils. The increased attention to good and accurate registration, which this system necessitates, is by itself no slight advantage, and I have taken every opportunity of impressing upon teachers and their assistants the importance of this part of their daily work. The new sets of registers recommended by the Committee of Council are now generally used in my district. In 89 schools they are kept well and carefully;

in 175, if not so well as to satisfy the just requirements of the Inspectors, yet sufficiently well to show that the teachers will have no difficulty to bring them into a perfect condition next year. Only 11 schools are noted as moderate, and in not one have I or my colleague had reason to record an entirely unsatisfactory result. I have made these observations partly because I attach very great importance to the subject, to which I have urgently called the attention of managers, in training as well as elementary schools, and partly because objections are frequently urged against the new registers, which are said to be complicated, difficult to understand, and not to be kept in order without a great expenditure of time. This is not the opinion of the most experienced schoolmasters in my district. I could name many, but will content myself with referring to the masters of Trinity Marylebone, St. Mary's Bryanstone Square, St. James' Piccadilly, and Kensington Parochial,—four schools which present all the difficulties likely to be encountered by any master. These teachers inform me that the registers are most valuable to them, as enabling them to lay distinct statements before the school managers, to ascertain readily facts of daily occurrence and of essential importance, and to control and check the work of their assistants and monitors. They further assure me that twenty minutes once a week is all the time actually required to make out the averages and to prepare full entries of the results, of course supposing that the daily entries, such as are always kept in every tolerable school, are accurate and complete. I believe it to be a fact that whenever any inaccuracies have been tolerated, considerable inconvenience is felt, and that it is exceedingly difficult to set matters to right after the lapse of a few weeks; but the only answer is that it is fairly a part of every teacher's duty to keep the registers carefully, and that it must be done.

Certificated teachers.

The number of these teachers continually increases. Last year I recorded an increase from 61 in 1850 to 223 in 1855. The counties of Buckingham, Bedford, and Herts have been since detached from my district, yet I still find no less than 248 employed in the single county that remains under my inspection. This number does not fall far short of that required for the boys' and girls' schools, of which there are 262; twenty-three certificated teachers are employed in infant schools. There are, therefore, thirty-seven schools for boys or girls conducted by uncertificated masters and mistresses. In a few years I expect that scarcely any will be employed in my district, excepting for infants, or small mixed schools. This I hold to be a matter of considerable importance. I am far from saying that the most highly educated persons are the best teachers, or that their efficiency always corresponds to

their position in the class list, or that teachers, at least equal to the generality of these certificated masters, are not to be found among those who have not presented themselves for examination. But the following points appear to be incontrovertible, and to be decisive of the question, so far as regards the rising generation. A teacher must be acquainted with every subject which he has to teach, sufficiently at least, to pass the examination for the third class, or he and his pupils, especially the pupil-teachers, will fall far short of any fair standard that can be proposed for testing their attainments. A deficiency in such elementary knowledge can only be attributed to want of ordinary abilities, to imperfect training, or to indolent or desultory habits,—each of which defects is detrimental to a teacher's influence. The mental training required for passing a fair examination is of essential importance to a teacher, quite independently of the actual value of his attainments. For my own part, I only regret that any opening will hereafter be left for persons under thirty-five years of age to enter this profession without passing through a training college. I repeat what I said last year, because I hold it to be a subject of great importance, which ought to be maturely considered, that a satisfactory examination should entitle condidates much under that age to free instruction in a training college, and not to augmentation of salary in elementary schools. I much fear that a shrewd calculation of the pecuniary outlay and incoming will induce no small number of pupil-teachers to take situations, for which they are radically unfitted, in the hope that they may obtain a certificate in a few years, and in the meantime receive a salary, which, though not a large one, is sufficient for their comfortable maintenance.

Pupil-teachers:

The number of pupil-teachers is also increasing steadily. Last year we found 640 teachers for 38,074 children; this year, 678 for 40,181, that is, nearly in the proportion of one to fifty for the whole number in attendance. They are not, however, distributed equally, since in schools of high character for efficiency, which meet certain definite requirements upon which we have to report, one pupil-teacher is allowed for forty in attendance. But, upon the whole, it is obvious that the increase for the number actually under instruction has very nearly reached its maximum. This is a point of some importance, since it proves that the difficulty of procuring an adequate supply of eligible candidates, in the present state of the labour market, has been somewhat exaggerated, and that there is no obvious reason why any proposals should be entertained by your Lordships for a modification of the existing system so far as regards the metropolitan districts. The following facts, however, have been brought

under my notice this year, and have suggested observations which I have already had occasion to submit to the consideration of some school managers. The proportion of female pupil-teachers is continually increasing. This is chiefly owing to the circumstance that *infant schools* are allowed to have the same number as girls' or boys', partly to the fact that the annual premium is ample for girls, exceeding indeed what they could earn in other situations for which they are qualified at the age of apprenticeship, while it falls short of what an intelligent and well-educated boy could be secure of getting by other occupations. Moreover, the future prospects of female teachers certainly exceed what any of them could anticipate in other employments. From the financial returns of this year I find that the average salaries of certificated mistresses in my district amount to 71*l.* 12*s.* 3*d.* About two-thirds of them have also a house or apartments rent free. There is, therefore, every inducement to girls to enter a profession which secures them a thoroughly good education, a comfortable maintenance during the period of apprenticeship and training, and a competence in mature life. The case is different with boys. The parents of a clever and good lad make a real sacrifice when they consent to his apprenticeship. They have to wait till the end of the year for the payment of a stipend which, as I observed, is less than he could have earned elsewhere, and is, moreover, a contingent payment, depending on good conduct and success at the examination. It is true that the payment is scarcely ever withheld, excepting for gross neglect of duty or moral delinquency; but this point is obviously not one that can be brought strongly before parents without risk of lessening their sense of responsibility. And again, although the average stipends of masters exceed those of mistresses, amounting in my district to 102*l.* 7*s.* 7*d.*, generally with a furnished house, yet it is less in proportion, both to their necessary expenses if they are married, and to what they might be certain of earning in other situations. I am, therefore, of opinion that some additional inducements ought to be offered by managers, in order to secure the services of the most intelligent boys. In some localities it will, probably, be advisable to pay a small sum annually, especially for the first and second years of apprenticeship. The following also is a plan which has been tried in some schools, and with complete success. The schoolmaster and some of the managers examine each pupil-teacher's conduct and progress at the end of every month or quarter of a year, and if they are perfectly satisfied, they pay at once a portion of the stipend due at the end of the year to

Females;

males;

the parents. The risk is very trifling; provided due caution has been exercised in this selection, and proper care been bestowed upon their instruction, such failure as would involve the penalty of withholding the annual payment is scarcely possible. At the same time, it is obvious that such a plan greatly strengthens the hands of the managers in dealing with the apprentices and their parents, enables them to check the first symptoms of insubordination, negligence, or idleness, and, at the same time, increases their personal interest in each individual pupil-teacher. This in itself I hold to be a sufficient reason for recommending the general adoption of the system. Of course I do not speak of official regulations, which would be an undue interference with managers, but of recommendations issuing from individuals whose experience and judgment give weight to their opinions. I observe with pleasure that in some schools both clerical and lay managers bestow much pains upon the mental training of apprentices, and the formation of their character; yet it must be admitted that in very many instances the whole charge is left to the schoolmaster, and little use is made of the opportunities which this system affords of bringing the feelings, principles, and habits of a youth into harmony with the institutions, of which he is expected and intended to be a zealous agent throughout his professional career. I could point out many schools in which the apprentices have received impressions not likely to be ever effaced, under the influence of their spiritual pastors; but there are, I regret to say, some instances in which the entry certifying to their satisfactory knowledge of Christian truth and attention to Christian duties, appears to be regarded as little more than a form, or, at any rate, as a statement for which the teacher rather than the signer is responsible.

General instruction of pupil-teachers;

With regard to the general training and instruction of pupil-teachers, I have little to add to previous reports. It does not appear to me that there is sufficient reason to believe that the boys are more imperfectly educated than formerly, while I have some reason to believe that the girls are, upon the whole, better instructed and more thoroughly trained. Upon one point I can speak very positively, after repeated and anxious inquiries at the various training schools; these girls are very far superior to any other candidates for admission in the essential points of religious knowledge, arithmetic, English grammar, and the power of expressing themselves in simple and correct language. I am informed by the principal of one training school, in which the largest number of those other candidates have been examined, with a view to the next Christmas examination, that they bear no comparison with

the ordinary run of those who have been pupil-teachers.* I have reason to apprehend that Saturday is too often regarded as a day during which teachers are wholly quit of responsibility towards their apprentices. I acknowledge that I cannot understand the principle on which teachers can think themselves justified in leaving these young persons to themselves from Friday afternoon to Monday morning. That portion of time appears to be just what is required to encourage more intimate personal intercourse, and to supply the defects incidental to a course of lessons given ordinarily in the brief intervals between school hours on working days. Were I the manager of a school, I should watch with even more than ordinary care the apparent influence of the teachers upon their apprentices on Saturdays and holidays. The success of the system depends essentially and primarily upon the moral and religious influences brought to bear upon these youths at a time when temptations are so rife, and impressions both for good and evil so deep and durable. I am not satisfied that sufficient attention is given to the industrial training of the pupil-teachers. It is, therefore with great satisfaction that I remark the increasing interest expressed by influential persons on this subject. A great effect has been produced in my district by the judicious and liberal encouragement given by Miss Burdett Coutts, who visited many schools in the course of the last year, and everywhere took note of the needlework, heard the mistresses or pupil-teachers give lessons on subjects connected with domestic economy, and proposed questions which were answered in writing at a general examination held at Whitelands. That lady has given an account of the results of the examination in a book which will be a permanent document to be consulted by all persons who desire to know what has hitherto been attempted in order to teach common things in girls' schools, and what are the results. The answers appear to me very creditable to the candidates and their teachers. I am well aware that they have been criticised as indicating power of language and facility of illustration rather than real knowledge of the principles on which the culinary and other processes depend, or of the practical value of the directions and instructions which they receive in such matters. This may be true ; much of their knowledge may be mere theory ; their mistakes may seem ludicrous to the man of science, or the experienced housekeeper. The real questions, however, are whether it is advisable to direct their minds to these subjects ; whether the

their industrial training.

* It may be objected that the list of Queen's scholars, published since this report was written, shows that many candidates, not pupil-teachers, are placed very high. The fact is that these are, as I have ascertained, nearly all students who have resided one year in the training schools.

lessons now given are in the right direction; whether their information, scanty and imperfect as it may be, is not better than total ignorance; whether, after all, it is not quite as much as girls from fourteen to sixteen years old may be reasonably expected to have acquired, in the midst of other not less important and more immediately urgent avocations. I do not think that any one can read Miss Coutts' book, or her admirable address when she distributed the prizes, without feeling the real value of what has been already effected, and anticipating still more satisfactory results in future. I am of opinion that it will be expedient to set questions in some good manual of domestic economy to all the female pupil-teachers in the second and following years of their apprenticeship; and also to have specimens of their needlework reported on after each collective examination by an expert sempstress. I am sometimes told that mistresses speak slightingly of this very essential part of their duty. This plan may counteract any such tendency, and at any rate throw the whole weight of an official recognition into the opposite scale.

Age and attendance of children at school.

I will, as usual, preface the few remarks which I have to make this year upon the condition of the schools by a comparison between the age and attendance of the children in this and former years. Last year I reported that—

In 1851	the	per-centage	of	children	above 12 years of age	was 11·28
„ 1852	„	„	„	„	„	13·43
„ 1853	„	„	„	„	„	18·85
„ 1854	„	„	„	„	„	7·02
„ 1855	„	„	„	„	„	10·76

I regret to observe that—

In 1856 the per-centage of children above 12 years of age was 8·24

I find, moreover, that 50·83 per cent. of children in attendance have been at school *less than one year*. The number of those who have been three years, and upwards, in the same school amounts only to 13·73 per cent. From the reports of my colleagues, I find the per-centage on the attendance of last year was—

	Of children above 12 years of age.	Of children who have attended less than 1 year.
In Yorkshire - - -	10·56 ...	46·07
In Lancashire and Isle of Man -	11·66 ...	46·19
Mr. Norris' District - -	10·75 ...	40·41
Mr. Bellairs' District - -	9·78 ...	39·57
Mr. Tinling's District - -	10·40 ...	37·21
Mr. Mitchell's District - -	11·66 ...	33·95
Mr. Brookfield's District -	11·21 ...	40·34
Mr. Stewart's District - -	11·29 ...	44·69

British, Wesleyan, and Denominational Schools.

Mr. Morell's District -	-	11·98	... 39·22
Mr. Arnold's District -	-	10·81	... 27·34
Mr. Bowstead's District	-	11·57	... 19·43
Mr. Lauries' District -	-	12·66	... 21·9

Roman Catholics.

Mr. Marshall's District -	-	11·14	... 36·59
Mr. Stoke's District -	-	9·47	... 38·89

It appears, therefore, that for the whole of England the average per-centage of children between twelve and fourteen years old is, in

Church of England Schools -	10·91
Roman Catholic - - -	10·30
British and Denominational - -	11·78

The British and Wesleyan schools, as I am informed, are generally recruited from the class of artizans. These returns show that the conditions of school attendance do not materially differ in any part of England, so far as regards elementary schools. I have consulted the highest authority on vital statistics, Dr. Farr, Chief Superintendent in the office of the Registrar General, and find from him that, supposing, the children were not removed from school until the age of 14, the proportional number of the living and healthy survivors between 12 and 13 would be 12·79, and between 13 and 14, 12·65 per cent. Therefore between 12 and 14, there would be 25·44, instead of 7·45 under instruction in the schools of my district. It is evident from these returns, upon which implicit reliance may be placed, that the children in the metropolis have actually less opportunity of acquiring instruction, so far as depends upon their attendance at school, than in any district of England. A larger proportion of them have been less than one year in the same school; a smaller proportion of them are above twelve years of age. To what causes is this very remarkable, and, I should think, unexpected result to be attributed? The most obvious answer is that the remuneration, as well as the demand for juvenile labour, is higher in this than in other districts. Yet the answer is not satisfactory; for it does not appear from these returns that the school attendance in different districts varies according to the employment of labour or the average rate of wages. The proportions, for instance, are very nearly the same in Mr. Kennedy's, Mr. Mitchell's, and Mr. Brookfield's districts; the first having a great majority of schools in manufacturing towns, the two others being all but exclusively agricultural. It is, however, obvious that in no one district is the attendance sufficient, either as regards the age to which the children remain, or the time during which they are under instruction in the same school, to enable a fair

proportion of them to receive a systematic education in the elementary subjects, much less in the mental training and moral discipline which are acknowledged to be indispensable. This fact is the more painful, inasmuch as the returns represent the condition of the best schools in every part of England. It is an admitted fact that schools not under inspection are, with few exceptions, far inferior to these; and, as I have reason to know, most decidedly so in respect to the discipline and organization, upon which the attendance to a great extent depends. In London, moreover, as I have before remarked, a vast stratum of ignorance, misery, and vice underlies that portion of the population from which our national schools are recruited. The evil is enormons; so far from diminishing, it increases steadily. Every year witnesses the absorption of a larger number of young children into that vortex of crime or vice and destitution, which appals the philanthropist and seems to present hopeless embarrassment to statesmen. Our good schools are improving continually and in all respects. They are more commodious, more completely organized, conducted with more energy and talent than formerly; but the work which they have to do is thwarted by obstacles connected with our social system, against which they have no power to contend. Without further discussion of general points, I will state briefly a few practical inferences which they suggest:—

1. More than one half the children in my district remain *less than one year* in the same school. This is partly owing to the carelessness and indifference of the parents; but partly, and as I hope and believe, still more to their migratory habits. It requires some personal knowledge of the poor in various localities to realize the extent to which this is carried. District visitors generally find that nine-tenths of their poor have removed to another street or quarter within two or three years. This indicates the great importance of a substantial uniformity of system in the schools to which the children are transferred. If reading, writing, arithmetic, and other elementary subjects are taught on methods materially differing in various schools, half the children in London will have to recommence their education some four or five times during their short and broken period of attendance. It is chiefly on this account that I deprecate the introduction of novel methods, unless indeed they are really necessary, and are such as can be introduced nearly simultaneously and by general consent There is at present a continual approximation to such a degree of uniformity as may obviate this evil to some extent; but it is liable to be seriously impeded from time to time by well-meant innovations proceeding from persons, who are less

conversant with the practical details of school-keeping than with the theories of educational writers.

2. It cannot be doubted, looking at the returns for the last six years, that the number of boys and girls under instruction to the age of 13 or 14, is far below a fair standard. It shews no tendency to increase; I believe that it is likely to be stationary under existing circumstances. With regard to the children of poor workmen, I am convinced that the case is still worse than appears from these returns, inasmuch as 70 *per cent.* of the children to whom they refer pay from 2*d.* to 6*d.* a week in school fees.

Inducements to parents to keep their children longer at school.

The question is whether anything can be done to induce the parents to keep their children at school longer, or to supplement their education afterwards. I believe that the system of presenting certificates to boys above 12 years of age who have attended school regularly, and have given satisfaction to the managers, has the twofold advantage that it involves little trouble and expense, and also affords a well-merited gratification to the parents and the children. I think it also very probable that the possession of such a certificate will be beneficial as well as creditable to deserving youths in after life. It would be a recommendation to a domestic servant, an artizan, or a clerk, and, therefore, have an actual money value, in addition to its moral weight. I have, moreover, reason to believe that a few children may be kept in school perhaps two or three months for the visit of the Inspector, in order to obtain this certificate. In some of the few cases which have hitherto occurred in my district it has had this effect. At the same time I am convinced, from my own observations, and from frequent discussions with the most experienced teachers, that no general, and, indeed, no perceptible effect will be produced upon the average attendance, by this system, unless it be connected with some pecuniary advantage, some system of prizes or rewards, or be recognized in some formal and very public manner by the employers of labour. The truth is that the parents remove their children because they contribute to the support of the family, instead of being a burden upon its resources; and the employers take them because their labour is much cheaper, and, in some respects, more valuable than that of adults. I cannot see that either of these facts is likely to be affected, or the results materially modified, by any distribution of merely honorary rewards. In London, the employers of labour do not represent a distinct class, as of millowners in the manufacturing, or of farmers and landowners in the agricultural districts; they are tradesmen, small householders of every description, for the most part indifferent, and sometimes even antagonistic to the improvement of elementary education. I

shall be glad to see prizes given, still more to see some leading capitalists come forward to support a general system; but so long as the social condition of the country is unchanged, and all interference with parents and employers on the part of Government is repudiated as unconstitutional, or rejected as impracticable, there is little prospect of retaining boys or girls, being the children of day labourers, in school beyond eleven or twelve years of age. What then can be done to supplement the schools? It may be that not much generally, yet something of real value may be effected. I believe that good evening classes conducted with the same energy, talent, and devotedness as has been exhibited by the Rev. W. Rogers, incumbent of St. Thomas', Charterhouse, are calculated to attract many youths who feel their deficiencies, and are anxious to complete their education. At present little is done for such schools. They are not easily inspected. It is very difficult to find good teachers or to pay their salaries. It is not to be expected that many clergymen will or can give up some hours weekly, after a day of laborious ministration in wretched hovels, to the instruction of their young brethren. A strong constitution, unflagging spirits, combined with a genuine vocation for teaching, are qualifications possessed by Mr. Rogers and some others, whom I admire and revere for their unrequited exertions, but they are not less rare than indispensable to the success of such a system.

Night schools.

General Remarks on children's attainments in inspected schools.

The following table represents the opinions of myself and my two colleagues upon the state of instruction in the boys' and girls' schools, 276 in number, inspected by us last year:—

Subjects.	Number of Schools in which subjects enumerated are reported to be taught			are the Subjects of a Report.
	Excellently, Well, or Fairly.	Moderately.	Imperfectly or Badly.	
Holy Scriptures	197	22	–	219
Catechism	193	21	1	215
Reading	151	71	1	223
Writing	147	73	1	221
Arithmetic:—				
Simple Rules	131	51	12	194
Compound Rules	155	37	3	195
Higher Rules	89	17	1	107
Geography	146	39	1	186
Grammar	90	71	8	169
History	72	6	1	79
Music from Notes	38	1	–	39
Drawing	27	–	1	28

A few remarks upon each subject may suffice to explain the marks, and to indicate the conclusions which may be fairly drawn from them.

Religious instruction.

The reports upon the knowledge of Holy Scripture, shown

by the children in the great majority of schools, corroborate the statement, which I have so frequently had occasion to make, touching the value of this fundamental subject of instruction. I confess that I am at a loss to understand the depreciating tone in which it is not unusual even for persons of ability and experience to speak of the Scriptural knowledge of boys and girls in national schools. In those schools which I have noted as *fair* the children are conversant with the leading facts recorded in both portions of Holy Writ; they have learned a considerable number of texts bearing mainly upon practical duties, and upon those great truths which all religious persons consider to be essential to salvation; and both the history and the texts are in most cases well explained and illustrated by the master or mistress in collective lessons, for which they are specially trained in the normal colleges. I have no doubt that all the children who attend these schools regularly, and rise to the first division, do acquire an amount of Scriptural knowledge, which will remain with them through life, and be of permanent benefit to them. Of course it would be extremely easy to examine them in such a manner as to fix attention upon their inevitable deficiencies, to detect great chasms in their knowledge, and even to elicit a great number of crude notions and erroneous views, either of historical events or of doctrinal matters. They are after all, but young and very partially instructed children; they bring with them to the school much of error and prejudice, which can scarcely be detected even by an intelligent teacher; they are at a loss to give clear expression even to those thoughts which act most powerfully upon their minds and influence their conduct: and I really believe, that without great patience, and much of that tact, which long experience combined with a natural aptitude alone can give, even the best-informed teachers may fail in eliciting the information, which the children really possess, and which the bystanders at an examination naturally expect them to produce. With regard to those schools which are marked "good" or "excellent" a higher standard has been reached, and results achieved which no candid observer can possibly deny.

Reading.

I have often remarked that good reading, while it is one of the most valuable, is also one of the most difficult attainments in our National schools. The irregular attendance, the constant migrations of the children, and the inaccuracy of their previous instruction, present obstacles scarcely to be overcome by the most able teachers. We have only awarded the high mark "good" to those few schools, in which the elementary lessons are conducted efficiently and systematically, and in which the elder boys or girls read with perfect fluency, accuracy, and correct expression. This is the case with many

schools, but I would particularly recommend any one who wishes to know how well and intelligently girls and boys can be taught to read, to visit the girls' school connected with St. George's Hanover Square in South Street and South Molton Street, and the boys' schools at Kensington, and St. John's Wood. With regard to the system of teaching the elements of reading I feel more disposed every year to deprecate any radical change. The introduction of the phonic or the phonetic method would be attended with practical difficulties, which I believe would be entirely insurmountable; and where the attempt has been made the results, so far as I could ascertain, were not very satisfactory. In fact, where the teachers are intelligent and energetic, and the school well organized, and supplied with requisite apparatus, children do learn to read in the same time, which, as I have ascertained by inquiry, and by personal investigation, is required in those countries in which those systems have been most successfully carried out. Still very much remains to be done in order to bring our own system generally to a satisfactory standard of efficiency. The following deficiencies have attracted my attention in many schools, and some vigorous measures should be taken to supply them. 1. The reading books are often ill adapted to the classes in which they are used; the general fault being that they are not simple or intelligible. In a great number of schools I have reported that a larger quantity of easy reading books is required. 2. Sufficient pains are not taken to illustrate the reading lessons by maps, diagrams, or pictures. 3. The teachers do not generally think it necessary to read the lessons carefully beforehand in order to be able to explain difficult words at once in clear and simple language; indeed, I have not unfrequently found that the pupil-teacher was really ignorant of the meaning of several words in a lesson read by one of the middle classes of a school. 4. Much time is wasted in unnecessary repetitions, spelling long words, taking places, and by a variety of awkward expedients, which save an idle or incompetent teacher the trouble of exerting his own mind, or exercising the energies of his class. Upon the whole I am of opinion that the pupil-teachers require more careful and systematic instruction in the art of teaching to read, than they usually receive. 5. There are not many schools in which the elder boys and girls commit considerable portions of English prose or poetry to memory. I have long been convinced that the neglect of this practice, to which so much time is properly devoted in higher schools, has been most detrimental to the children; and I attribute the great proficiency of the schools, which I have named as excellent in this subject, chiefly to the care and ability with which the recitations of long passages learned by heart have been con-

ducted. It is obvious, however, that no good will be effected unless the passages are previously explained and thoroughly understood, the accent and intonation of the pupils carefully corrected, and the faults of affectation and exaggeration watched and checked. I am happy to say that the principals of training colleges, male and female, whom I have had an opportunity of consulting, fully concur in these opinions, with special reference to pupil-teachers, to whom these observations and suggestions apply with peculiar force.

Writing: penmanship;

Under the head of writing are included penmanship, writing from memory and dictation, and simple composition. I have taken great pains to press on the teachers and pupils the importance of good penmanship. It is true that the writing was very bad a few years since, illegible and inaccurate. An improvement is noticeable, but far more pains ought to be taken, and I seldom find that the children are taught to hold their pens properly, and to sit in a good position. Steel pens, which are often rusty or broken, and very badly made, make it more difficult to teach writing, but as it is certain that quills will never be generally used, considering their expense and the waste of time in mending them, it only remains for the teachers to make the best use of the materials which they have.

writing from dictation;

The writing from dictation is generally fair, sometimes very good; I consider a school to be in an unsatisfactory state unless all the boys and girls between 10 and 12 who have attended regularly can write an exercise from the higher reading-books with few faults of spelling or punctuation.

composition.

Composition is a very weak point in most schools. The general habit of speaking vulgar and incorrect language, so striking a characteristic of our working classes, is certainly not corrected with sufficient care in our national schools. I consider it to be one of their greatest defects. The habit of learning pieces of good English prose and poetry will go far to counteract the tendency, but I am clearly of opinion that more ought to be done than is even attempted in any but the very best schools, to teach children to speak good English, and to produce their little stores of thought and information in a simple and correct style. One obvious mode of doing this is to make children reproduce in writing the substance of collective lessons on common things, which now form a recognized and very important branch of education.

Arithmetic.

These returns relating to arithmetic shew that the compound rules are taught in all boys' and girls' schools in my district, excepting in the few industrial or ragged schools where the age and condition of the children would make it impracticable. The progress is fair or good in five-sixths of the whole number. The higher rules, including decimals, interest, &c., are taught in a satisfactory manner, in rather less than one third. This

may not appear to be a high standard, and I am satisfied that far more can and ought to be accomplished, even under the discouraging circumstances to which I have alluded. But when I look back a few years, and remember that only a small proportion of boys in the first classes of the largest national schools could write down sums correctly, and work them afterwards, without assistance; and that it was then very unusual to find a girls' school in which the first class could make out an easy washing bill, I feel more gratified by the progress, than surprised at the defects which still exist.

Other subjects of instruction.

Upon other subjects of instruction I do not feel it necessary to do more than refer to the observations which I made upon the progress and attainments of the pupils in last year's report.

Diocesan inspection.

I feel it my duty to state the great benefit which has accrued to a large portion of my district by the exertions of the Rev. J. D. Glennie, Secretary and Inspector of the London Diocesan Board of Education. Mr. Glennie's attention has been directed chiefly to those schools which are not in the receipt of annual grants from your Lordships. Most of those schools have been in a very unsatisfactory condition for many years. By his suggestions and active assistance, they have been generally much improved, and a large number, I believe more than forty, have been supplied with certificated teachers, reorganized on an efficient system, and are now under Government inspection. Mr. Glennie's reports are full of interesting information. I feel bound to bring these facts under public notice, since they prove how much advantage may be derived from the cordial co-operation of Diocesan Boards with Her Majesty's Inspectors.

Charterhouse, St. Thomas' schools.

In concluding this part of my report, I cannot refrain from once more calling attention to the vast results that have been achieved in one parish of my district. It is a parish in which all the difficulties which so often prevent the establishment of schools, or cripple their efficiency when established, exist in the most formidable degree None of the inhabitants are even moderately rich. The larger portion are in extreme destitution; their habits have always been disorderly; their occupations, for the most part, of a low and degrading character. The clerical income, after paying curate and expenses, is less than 200*l.* per annum, without a residence; but by great exertions and self-sacrifice, combined with unusual talent in founding, organizing, and managing schools, the incumbent has provided for the educational wants of his district to an extent, which, under the most favourable circumstances, has scarcely been equalled in any parish of this metropolis. I think it, therefore, important to present the following summary of what has been done by Mr. Rogers, the incumbent of St. Thomas', Charterhouse. It is not the first

time that I have spoken of the services which he has rendered to the cause of education. It is possible that in other parts of England similar exertions may have produced similar results; but so far as my own observation has extended, the work here effected has no parallel. I believe that it stands alone.

Charterhouse, St. Thomas'.

The school system in this district is thus organized:—

The district has a population of 9,500, of which by far the greater part consists of extremely poor families, costermongers, &c.

There are three school buildings, two are now fully occupied, and one is in progress, it will be opened early in 1857.

Boys.—There are at present two boys' schools in three divisions,—

1. Upper school for sons of tradesmen, fee 1*l.* per quarter, or 15*s.* Boys promoted from the other schools are admitted to this for 10*s.* per quarter. Number in attendance 80. About one-half the boys come from neighbouring districts.

This school is conducted by a certificated master, an assistant, and one pupil-teacher. The instruction includes Latin, French, Euclid, and algebra, in addition to the usual elementary subjects.

2. National school for boys. 260 in attendance. Two certificated teachers and eight pupil-teachers. School fees 3*d.*, 4*d.*, and 6*d.* Two school-rooms and a class room. Completely organized, and conducted with great liberality.

3. Free school for boys. 90 in attendance, conducted by an assistant master and pupil-teacher.

Total - - - 410 boys.

Girls.—An excellent school, 160 girls pay from 3*d.* to 1*s.* weekly. Certificated teacher, an assistant, and six pupil-teachers.

Infants.—A very good school, in two divisions, the upper division has 70 girls and boys between six and eight years old. It is conducted by an assistant and pupil-teacher. The children pay 4*d.*

The lower division has 200 in attendance. A good teacher, and four pupil-teachers. A well-conducted school.

Total - - - 160 girls.
" - - - 70 mixed.
" - - - 200 infants.

There are very large evening schools in four divisions,—

1. Males from 17 years old, upwards. About 80 attend more or less irregularly. They learn elementary subjects, grammar, geography, algebra, book-keeping. The most popular subjects are writing and arithmetic. They pay 2*s.* monthly. The instruction is given, (1), by four paid teachers, persons employed in various ways during the day. (2), by two assistants from the boys' school. (3), by voluntary teachers, the incumbent and curate.

2. A boys' school, conducted by a certificated master, employed part of the day in the national school. About 100 attend. These boys are at work in the day and do not attend any other school; they are generally between 14 and 17 years old. The school fee 3*d.* to 6*d.* weekly.

3. Females, age from 17 upwards. About 30 in attendance; pay 2*s.* monthly; learn elementary subjects, including geography, grammar, &c. The most popular subject is writing; taught by assistant mistress from the girls' school.

4. Girls from 14 to 17 years old; about 60 in attendance; attend no other school. Usual routine of national school instruction. Pay 3*d.* to 6*d.* weekly. Taught by a second assistant from the infant school, and a paid teacher.

There are also classes for French and drawing. About 30 learn French, paying 2*s.* 6*d.* monthly. About 80 learn drawing, they are taught by a master from the Department of Science and Art. Pay 2*s.* monthly.

The total cost of supporting the schools amounts to 1,000*l.* per annum. The school fees amount to nearly 700*l.*

In addition to these schools, Mr. Rogers has lately built a large institution, with three large school-rooms and two class-rooms, capable of accommodating 1,000 children. These are excellent rooms. He proposes to admit children belonging to the district for 1*d*. The object will be to supply an education virtually gratuitous to all the children of the district. In establishing these schools, Mr. Rogers has received liberal assistance from your Lordships. In conducting them he has, of course, the usual annual grants. These, however, have not hitherto supplied that assistance which is much needed for the day schools in which gratuitous instruction is given, nor for the evening schools: but I am of opinion that the capitation grants, with some adjustment in the scale of payments, will in future make these institutions so nearly self-supporting as not to require a larger amount of subscriptions than can be raised even in this district.

Ragged and industrial schools for destitute children.

In my report last year I expressed my strong conviction that the national school system is by no means calculated, nor indeed intended primarily, to supply instruction and training to the lowest class of children. It cannot give a home to the destitute. It ejects, by an involuntary, and partly unconscious action, elements which it cannot assimilate to the general mass, which, indeed, to the extent to which they are admitted, impair the discipline, deteriorate the general tone of the children, and materially affect the organization. I also stated that two modes of dealing with this part of our juvenile population are now on their trial, viz., ragged schools and houses of refuge, and that of the two, the latter appeared on the whole best adapted to remedy the evil, and to preserve individuals from certain degradation and probable ruin. The subject has been brought under my notice, and some important facts have presented themselves in the course of this last year, during which I have visited several institutions of the latter kind, which are now receiving considerable annual grants from your Lordships. Separate accounts of these are given in the tabulated reports. The following points appear to be such as may properly be here submitted to your consideration. These institutions are intended partly for boys, partly for girls. In one respect they are alike, being intended for destitute children—children either deserted by their parents or having only homes from which no Christian would hesitate to rescue them. They differ, however, so materially, both as regards the objects contemplated by the supporters, and the means by which those objects are attained, that I shall consider them separately.

Girls' schools of industry.

The general object of the homes for girls is to train them for domestic service. This is, in fact, the first object in all these institutions. In all of them the girls are boarded,

lodged, and educated, little communication being allowed between them and their relations. They receive a plain elementary education, and are instructed in all kinds of household work. They are always under the charge of matrons, some of whom possess very peculiar qualifications for their difficult and responsible work; and, in every instance, they are frequently instructed and carefully superintended by a committee of ladies. In one institution several girls are cripples; these are instructed in different kinds of straw-work, knitting, lace-making, and other light occupations, by which they may earn a livelihood. It is impossible to visit these schools without feelings of deep sympathy with the supporters, whose very large pecuniary contributions do but imperfectly represent their Christian benevolence and zeal. The visitors evidently know the children individually, take pains to acquaint themselves with the circumstances under which they have entered the institution, the progress they are making in their studies, and still more, the effect produced upon their principles and habits by the influences by which they are surrounded. There can be no doubt that profound and permanent impressions are made upon the minds of these girls, that feelings of grateful affection towards their benefactors are developed, and that their spiritual nature undergoes a thorough change in many instances, quite as many, it may be, as the managers expected when they undertook this work. I have remarked in some of these schools that the frequent intercourse with persons of so much cultivation of mind and refinement of habits, animated as they are by a wholly disinterested zeal, gives even a higher tone to some of the inmates than is usually found in our national schools. It is obvious that in some respects girls who are at all hours of the day under the direct control of a well-trained mistress or of Christrian ladies, have peculiar advantages over the children of coarse and uneducated, though industrious and honest parents. Not that I regard this in any way as an objection to the system. I fully agree with one, whose sound sense and thorough knowledge of the condition of the poor is only surpassed by her loving zeal, that no education or training that can be given to girls so circumstanced can put them in all respects, or even in the most important respects, upon a real footing of equality with those who are brought up in an honest home. Do what we can for them, their first entrance upon life will be attended with peculiar trials and difficulties. Miss Carpenter says in her evidence before a committee of the House of Commons:* —"I believe that the children of industrious labourers will always be preferred to workhouse children. I would take a

* See Minutes of Evidence, May 1852, p. 123.

girl as a servant from a well-conducted family rather than school, because I believe that a well-conducted family is the order of Providence, and is more calculated to develop the human being than any school can do." I consider indeed that all the moral, religious, and intellectual benefits conferred upon these girls, and even the special preparation in industrial and domestic habits, are but more or less partial compensations for that first great blessing, a good home, of which they have been deprived for no fault of their own, and very frequently, it may be, owing to defects and positive evils in our social system, for which some portion of responsibility attaches to all members of society, and which the more opulent and influential are specially bound to counteract. There are, however, some considerations applying in different degrees to most of these institutions, which I feel bound to bring under your Lordships' notice. One of the greatest difficulties, and at the same time, of the most essential requisites in every institution for girls, is a perfect system of superintendence and classification. Children from six to twelve years of age are brought from homes in which the most vicious, coarse, or indecent habits have been inculcated from infancy, into the society of others more or less partially reclaimed. If they sleep in the same room, and share in the same occupations with their schoolmates, it is evident that a constant influx of contamination must counteract the work. Now I cannot say that my inquiries upon this point have elicited satisfactory answers. I have not the least doubt that the matrons and the visitors are generally alive to the fact, and watchful in checking, if not in preventing, the progress of contamination; but still, in point of fact, the children are sometimes mixed in the dormitories, to a degree that appears to me highly dangerous, and they have in most cases many opportunities of conversing freely in the absence of adults and responsible superintendents. I fear that the difficulty of adjusting the claims of those, who are destitute and perishing, to immediate admission, with that complete separation of the partially reformed inmates from all deteriorating influences, is too often evaded. Nor do I see how it can be altogether surmounted, excepting by such a combination and mutual agreement between the managers of different institutions as would enable them to transfer the children from one to another, until a perfect system of classification could be carried into effect; or, on the other hand, by the adoption of a more general system, which, for some other reasons, appears to be required in order to meet the real exigencies of the case. The imperfect classification, which seems inevitable under existing circumstances, has also sometimes a material effect upon the instruction of the girls, and what is of far more im-

portance, upon their industrial training. To supply both these desiderata to some thirty or forty girls of all ages, and all degrees of ignorance and awkwardness, requires a very complicated and also expensive organization. The result is either that a great number of persons are employed in several departments, each with a very small number of girls, or that the girls are left to do part of the work without proper superintendence, and receive a less complete course of teaching and training than the managers themselves consider desirable, if not indispensable.

Boys' schools of industry.

The foregoing observations do not apply to the same extent to the institutions for boys. It is clear that girls must, at any cost, be rescued from contagion. It will not be sufficient to inculcate right principles; they must have the safeguard of modest and decent habits. Their entrance into one of these homes is the commencement of a life during which, so far as depends on their benefactors and friends, they are to be members of Christian families, with the restraints and occupations and safeguards of Christian homes. It is the intention and the hope of their friends that they will be separated and kept aloof from contact with those forms of evil which have surrounded their infancy or childhood. It cannot be so altogether with the boy; he must learn not merely to avoid, but to resist bad influences. He must earn his livelihood in whatever place or circumstances his lot be cast, amidst temptations, which, if not severer, are, at any rate, coarser, than those which can reach the female servant in decent families. And, therefore, it is not an evil, at least, not an unmixed evil—it may be a practical advantage,—that during his residence in one of these homes he may see boys such as he himself once was, gradually assimilated to the tone of the institution. It may be a stern but useful lesson. I believe also that the influence of those who are truly, though partially, reformed is likely to tell very powerfully upon the new comers. This, of course, implies two things, first, that the superintendent has a vigilant eye and keen discernment; and, secondly, that the institution is conducted on sound principles, and with complete efficiency. The industrial schools for boys are of two kinds. In some the attendance is only for the day, when the boys learn some very easy trades; others, in which they are boarded and lodged, and instructed in carpentering, shoemaking, matmaking, tailoring, &c. The instruction is not always given on the same premises. In one instance the boys attend ragged schools (either an unhappy misnomer or a too true indication of the effects upon part of the children,) in the neighbourhood. I am of opinion that schools ought not to receive annual grants unless the system include all that is

necessary and practicable for the moral, intellectual, and industrial training of the inmates. One very interesting point connected with all these insitutions touches the future condition of the inmates. What situations they generally procure—what testimony we have that a fair proportion of them are permanently benefited by the system—what means the supporters have of ascertaining these facts, of watching over their progress, and of interposing when necessary, between them and the dangers to which they may be exposed by an injudicious or unfortunate choice of a situation.—These are questions which I have frequently proposed. From the answers generally given to the two first questions, I have reason to believe that the managers are justified in dwelling thankfully upon the past and anticipating good results for the future. Situations in decent, sometimes in very respectable families, are readily obtained for the girls, provided that a favourable account of their dispositions and habits can be given. The boys generally go to the colonies or find remunerative employment in our great industrial marts. With regard to the latter point, I think more may be done, or, at least, that what is done, may be done more completely and systematically.

Reformatory schools for criminal and abandoned children.

In the case of reformatories, attention has been drawn to this subject both in this country, and, to a greater extent, in France. In Colonel Jebb's Report on the Discipline of Convict Prisons for 1854-5, p. 31, the necessity of an effective system for watching the boys who leave reformatories is spoken of as a special subject of concern and exertion to the promoters and managers of schools by the Rev. Sydney Turner. In the same report, Mons. De Metz and Mons. De Persigny bear testimony to the importance of the system known in France by the name of patronage.* That is a society, or rather societies, established for the express purpose of finding situations for youths on leaving reformatories, and of giving them such advice and assistance in circumstances of difficulty as may be found practicable. An excellent account of such a society, established at Paris in 1833, by M. De Beranger, and which counted among its members peers of France, councilors of state, many deputies and persons of high station, is given in the Appendix to this Report (*Appendix* B.) Of course, the work would be encumbered with less difficulties and attended with more satisfactory results if applied to industrial schools, such as those now under consideration. I am certainly of opinion that a committee acting in union with the Ragged Schools Com-

* I observe, however, that M. De Persigny regrets that the Patronage societies, from want of stimulus and encouragement, have, in a great measure, abandoned their work. He holds out a prospect, doubtless since realized, of assistance from the Imperial government.

mittee and the managers of these homes of refuge, could render great services to the cause, partly by looking out for situations, and still more by keeping up a communication with the youths in after life and with their employers; nor do I think that a judicious distribution of rewards for good conduct, chiefly of an honorary character, would be attended with much trouble or expense, while it might produce very beneficial results. The great want of many of these poor youths must be the want of sympathy. Their most depressing feeling must be that in case of neglect, ill treatment, or depravity on the side of their employers, they are abandoned to their own weakness. They have little to comfort, encourage, or restrain them in the recollections of their infancy and childhood, and though it may be, no mere stranger's influence can compensate for that heaviest of all deprivations, yet such kindly care will supply much that is needed for their encouragement in resisting evil and persevering steadily in good. I am well aware that this object is kept in view, and, in some instances, with excellent results, by the managers of these institutions; but their energies, as well as their resources, are not more than sufficient for what they have already undertaken; and the formation of such a society might at once conduce to the improvement and completion of the system now in operation, and contribute vastly to the permanent benefits which it can achieve. There remains one other point which I approach with considerable hesitation; but which is too important to be passed over in this first report upon the system. I mean the financial question, What is the cost of these institutions compared with the number of children educated and maintained? I must say, previously, that too liberal a view can scarcely be taken of this question. The deliverance of a very small number of boys and girls from such utter degradation as must otherwise have been their lot is not to be measured by any merely pecuniary considerations. Still it is a question, not whether it is an expensive system, but whether the expense incurred produces the largest amount of good that can be reasonably anticipated. It is quite true that as the contributions are purely voluntary, no responsibility, properly speaking, can attach to the contributors for any unnecessary outlay. But, as I am well assured, these benevolent and most conscientious persons would not elude the question on that ground,—they really wish, not only to do good, but to do the greatest amount of good in their power: and they feel, moreover, for the most part, that they stand in the double position of liberal contributors and also administrators of funds supplied by others who have implicit reliance both upon their zeal and judgment. Besides, after all, there are certain limits to public charity; what is expended in one way is, to some extent,

withdrawn from other channels, and if larger sums than necessary are spent on the reformation of the children of the vagabond, or the support of the destitute, the sources from which education is supplied to the children of the honest and industrious poor may be materially affected. The actual income and expenditure of the schools in question is shown in the following table:—

Name of School.	Number of Children.	Expenditure last year not including Rent.	Grant from Committee of Council.	Character and Objects of the Institution.
		£ s. d.	£ s. d.	
Westminster—St. Anne's Lane	28	405 0 0	57 0 0	These boys learn to fold paper and to make bags for grocers and bakers. They have a printing press, but do not learn to compose. They are instructed in neighbouring ragged schools. The institution is doing good, but both the industrial and educational departments might be advantageously extended and more completely organized.
Coburg Row -	12	120 0 0	26 15 0	Twelve destitute girls are trained for domestic service. The premises are inconvenient. About 130 children of both sexes are instructed in day schools by a careful mistress, assisted and superintended by lady visitors.
Dacre Street -	41	395 7 4	30 10 0	The home is intended for girls who, either through the loss of their parents, bad associations, or evil habits, are peculiarly exposed to temptation. They are boarded, clothed, and lodged, receive a very good plain education, and are trained for domestic service. The premises are very imperfectly adapted for this purpose.
Dorset Square, Nile Street, Female Refuge.	28	542 10 6	63 0 0	A home intended to train girls for domestic service. The *cripples* learn straw-hat, bonnet, basket, and mat making. This industrial institution is very complete, and conducted with remarkable skill and energy. It is an excellent institution, but the premises are far from convenient, excepting the laundry. There is a good nursery.
Paddington Home for Destitute Girls	12	316 3 3	49 17 0	These girls receive a very good education, and are well trained for domestic service. The premises are good and conveniently arranged.
St. Giles's and St. George's, Bloomsbury, 19 Broad Street - Boys,	630	1,126 9 3	234 15 0	The boys learn several trades under a very able and intelligent master. The girls are trained for service, and receive a plain education. In both the energy and conscientiousness of the teachers deserve high praise. The home for girls is a handsome and commodious building.
Girls,	30		134 19 6	
Dalston Refuge, Girls,	75	2,803 18 8	243 0 0 97 10 0	A very successful reformatory, conducted with great energy and good sense. The girls are kept at hard labour and trained for service. The instruction is confined to elementary subjects. Arithmetic not sufficient.
Marylebone, Grotto Passage.	16	1,143 7 3	58 0 0	There are three departments. (1) Free School for Boys, 31 present. (2) Do. for Girls and Infants, 76 present. (3) The Refuge, 14 resident, 9 daily attendants, Boys who learn various kinds of industrial work. This department appears to be conducted with energy and in an excellent spirit.

It is impossible to ascertain the average expense for the boys and girls who are maintained in these institutions

Some of them are connected with large ragged schools; in others a part only have board and lodging; in others the boys attend some hours daily; sometimes the expenses include considerable sums for materials, &c., which are worked so as to produce a fair amount of income. So far as I can judge, from a consideration of the several returns, the food of the children averages about 9*l.* yearly. The expense of rent is very large where the premises are at all convenient; and in small institutions the total average expense is excessive as compared with the results. These facts seem to lead to the conclusion that a more general, more effectual, and less expensive system ought to be attempted. I am well aware of the difficulty. No merely functional system would answer. The work must be done by individuals animated and directed by Christian zeal, or it had better be left undone. If, however, those who have at heart the deliverance of, *not a few individuals*, but, the great mass of the wretched children of this metropolis, would combine their efforts, and found large institutions in some localities within reach of London, and yet where land and provisions were not so expensive, it would, in my opinion, be possible to ascertain the way in which the minimum expenditure could secure the maximum of good. This might have been regarded as a mere Utopian dream a few years ago; but M. Wichern in Germany, and M. Metz in France, have proved that it is possible to combine those family influences, without which all real moral training is impracticable, and that Christian and disinterested zeal to which alone children deprived of parental aid can be safely entrusted, with *complete classification*, and an efficient system of organization and supervision. Such institutions conducted on sound principles, taking into consideration the mental and physical well-being and the social and political condition and prospects of these youths, may command the adhesion of the thoughtful statesman and secure the steady support of rational philanthropists. I could not visit these institutions, possessing such strong and peculiar claims upon my attention, without feeling the, weight of these considerations. It does appear to me that while there is more of spontaneity, more vigorous and energetic life in the Christian philanthropy of England than in any country in the world, a larger infusion of the principles of order and of combination is much to be desired; and, in reference to the best mode of dealing with the dense mass of misery and destitution, I believe that at this juncture a well-directed effort, aided by contributions from the State, would probably be attended with great success.

I have the honor to be, &c.

F. C. Cook,

To the Right Honorable
The Lords of the Committee of Council on Education.

Appendix B.

The following Statements are extracted from a French Pamphlet, Œuvre de St. Nicolas, published in 1849.

In the year 1827 M. de Beranger opened an asylum for children deserted by their parents, or having no natural guardians. He began with seven children in an attic room in the Faubourg St. Marceau. After some changes of situation, to accommodate the rapidly increasing number of applicants, he became the proprietor of two large establishments, one at Paris, Rue de Vanguard 112, the other at Issy, an ancient chateau, about six miles from Paris, and at the time when this pamphlet appeared had 1,000 inmates.

The distinctive character which particularly recommends these institutions to the attention of men devoted to the interests of humanity is the cheap rate at which they are conducted, taking into consideration that the work is thoroughly well done. As the writer of the note says, we must begin by proving that we do the work well before we can be allowed to boast that we do it economically.

The object is to teach the children a trade, under religious influences and in a house conducted in a paternal spirit. They are careful not to occupy too much time in devotional exercises. Their instructors are not men bound by any monastic vows, but are called brothers, to remind them continually of the mission of charity which they have accepted, and of the spirit in which it should be fulfilled.

They do not ordinarily admit children above twelve years of age. A preference is given to indigent orphans, illegitimate children, and children of criminals, young vagabonds also are admitted, but not criminals. There is no distinction made between the inmates, although among them are found some whose ancestors have held the highest offices in the State.

One of their principal objects is to form schools of agriculture. Too many children, in the opinion of the managers, are destined to trade and manufactures. The fields need intelligent workmen. There the children will find a healthier air, purer manners, and a more secure position. They have, therefore, an establishment for horticulture in the old chateau of Issy.

They also propose to have separate houses of correction for very refractory children.

The course of instruction comprises religious and moral instruction; reading, writing, the elements of grammar, and the French language; elementary geography, outlines of sacred and of French history; oral calculation, arithmetic, book-keeping, practical geometry, and mensuration, linear drawing, vocal and instrumental music; elementary notions of physics, chemistry, mechanics, and natural history applied to common things.

The domestic duties are performed by sisters of charity.

After some good remarks on food, clothing, and cleanliness, it is noted that the children are under active and discreet superintendence day and night. The dormitories are lighted at night, the children are never left alone, and change neighbours frequently. Great attention is paid to their play hours. The exercises are encouraged which are best calculated to strengthen the children, and to give suppleness to their limbs; they have lessons in gymnastics and swimming; they take long walks, and sometimes in summer, as an extraordinary privilege and encouragement, they make long excursions, taking with them provisions for the day.*

* This is frequently done in Switzerland. It is very pleasing to see a number of boys and girls, accompanied by their teachers, exploring the beautiful scenery of their native land, evidently both enjoying and understanding much that, in exploring his own country, would be a sealed book to the child of an English peasant or mechanic.

It is remarked that this establishment, so numerous, composed of so many different elements, receiving no support from the public authority, accessible to all impressions from without, which has had 900 inmates, 250 of whom are young workmen, has passed through 22 years of agitation without knowing what is the meaning of a revolt.

The expenses of the two establishments are thus stated :—

	Total.	Average Cost per Head.
	Francs.	Frs. cts.
Salary of secretary (frère caissier), expenses of printing, office, postage, and other small items -	3,000	3 0
Salaries of almoners, sacristans, organists, singers, and chapel expenses - - - - -	7,000	7 0
Salaries of medical men, sisters in the infirmary, and expenses of infirmaries - - -	2,750	2 75
Wages of servants, expenses of utensils and sewerag-	3,250	3 25
Salaries of 19 resident and 22 non-resident professors - - - - - -	14,000	14 0
Furniture for class-rooms - - - - -	6,000	6 0
Housekeeping expenses - - - - -	60,000	60 0
* Food, including expenses of garden and some of the domestics - - - - - -	124,000	124 0
Fuel, lighting, and (furnisterie?) - - -	10,000	10 0
Keeping furniture in order - - -	7,000	7 0
Taxes - - - - - - -	3,000	3 0
Interest on debt, &c. - - - -	60,000	60 0
Total - - -	300,000	300 0

Taking away the last item, which has, in fact, no bearing upon the expenses of such an institution, it appears that 1,000 children actually receive an excellent education, are boarded and lodged, and clothed at an average expense of 240 francs, or 9*l.* 12*s.* per head.

N.B. I can state on the authority of a personal witness, J. Ruddock, Esq., one of Her Majesty's Inspectors of Parochial Union Schools, that the children in these institutions are really well fed, well clothed, and their appearance denotes that all proper attention is paid to their physical well-being. They look healthy and strong.

---

* They calculate the daily expense of food for each child in 1849 to be only 25 centimes, *i. e.*, 2½*d.* In England I believe that 4½*d.* would be the minimum.

GENERAL REPORT, *for the Year* 1856, *by Her Majesty's Inspector of Schools, the* Rev. H. W. BELLAIRS, M.A., &c., *on the* CHURCH OF ENGLAND SCHOOLS *inspected in the Counties of* WORCESTER, WARWICK, OXFORD, GLOUCESTER, HEREFORD, *and* MONMOUTH.

MY LORDS,

Review of work of inspection.

DURING the past year, I and my colleague, the Rev. J. W. D. Hernaman, have inspected 289 schools held in separate buildings and separately managed. In these institutions there were 399 school-rooms in which separate teachers were employed, viz., 94 boys', 90 girls' 60 infants', and 155 mixed. The number of children present at inspection was 30,010, viz., 7,724 boys, 6,666 girls, 5,192 infants, and 10,428 mixed. The number of certificated teachers employed in them was 192; of pupil-teachers 396; and the number of schools in receipt of annual grants was 216. As regards the condition of these schools I have little to add to my remarks of last year. They are, for the most part, efficient, as far as they can be under present circumstances.

Early removal of children from school.

The removal of children from school at a very early age still continues in the same proportion as before. The per-centages of children on the school registers are as follows:—

PER-CENTAGE of CHILDREN on SCHOOL REGISTERS

Aged												Who have been in School					
Under Four.	Between Four and Five.	Between Five and Six.	Between Six and Seven.	Between Seven and Eight.	Between Eight and Nine.	Between Nine and Ten.	Between Ten and Eleven.	Between Eleven and Twelve.	Between Twelve and Thirteen.	Between Thirteen and Fourteen.	Over Fourteen.	Less than One Year.	One Year.	Two Years.	Three Years.	Four Years.	Five Years and over.
8·34	7·94	9·02	12·01	13·15	12·44	11·68	9·46	7·01	4·76	2·64	1·55	42·33	20·86	15·4	9·56	6·43	5·42

I think it right to repeat here what I have stated, I believe, in every report submitted to your Lordships, that, so far as this district is concerned, no measures which do not meet the question of early removal from school will produce a general system of education for the poor. Our real difficulty is not so much the want of school buildings, or of efficient teachers in destitute and neglected districts, or of school payments (the honest labouring poor *generally* paying the school-pence willingly when their children are not employed), nor even the want of school subscriptions and support. Juvenile labour and the indifference of careless and dishonest parents are the causes of

our schools being so imperfectly filled; and, until some remedy or mitigation of this evil be found, it is hopeless to expect those results for which so many persons are crying out. The testimony on this point is not from any one part of the district in particular, nor is it applicable only to certain kinds of employment; it is universal. "One of the chief hindrances to education," says the Rev. G. S. Bull, rector of St. Thomas', Birmingham,—a clergyman, who has laboured long and diligently in the work,—in a published letter to the Mayor of Birmingham, "is the mischievously early removal of children, say of mere infants, to our workshops, warehouses, or factories. Many leave us before they can do more than spell their Maker's name, and repeat His Ten Commandments, or the simplest truths of the Gospel." Every manager of every elementary school in Birmingham will corroborate this statement. There is no lack of good schools in Birmingham; the accommodation is good, the teachers are good. The parents do not complain of religious intolerance, or of heavy school payments. But some send their children to remunerative labour, and some to steal, or to idle about the streets and beg; and so they are not found at school. Every town in the district has the same tale to tell. At Coventry I am told that the children are employed in making ribbons; at Bromsgrove, in making nails; at Redditch, in pointing needles. In the colliery districts they "shut and open doors in the pits." In the agricultural districts they "drive teams," "tend the cows," "watch the birds." At Malvern they "drive the donkeys;" at Newport "go to the forges." The schoolmaster at Newport, an earnest hard-working man, and successful as far as circumstances allow him to be, sends to me the following statement of his school:—

Number of boys admitted into school between 29 October 1855 to 29 October 1856 - - - -	327
Number that left school between 29 October 1855 and 29 October 1856 - - - - -	127
Average attendance for last quarter - - -	130
Number on the books on 29 October 1856 - -	180

Of these, twenty-six only have been in the school more than one year. This constant fluctuation and short attendance he attributes mainly to the great demand at Newport for juvenile labour. Another efficient master, in an agricultural part of Worcestershire, in explanation of the irregular attendance of his boys, and their early removal from school, sends the following statement of their employments during the several months in the year:—

January and February.—Plough driving, bean dropping, and wheat setting.
March.—Dropping beans, covering hops, planting potatoes, helping parents with hop poles, getting wheat into barns.

April.—The same, and bird tending.
May.—Binding hops to poles, and preparing poles, bird tending.
June.—Hoeing beans, weeding in fields and gardens, bird tending.
July.—Weeding and moulding late potatoes, helping in the hay fields, and gardening.
August.—Harvesting and gleaning.
September.—Hop and fruit picking—few return to school for three weeks after hop-picking for want of shoes, clothes, &c.
October.—Picking up potatoes, late harvest, and orcharding.
November.—Wheat setting, bird tending, and plough driving.
December.—Plough driving.

Such is the universal cry from schoolmasters and school managers throughout the district, and my own conviction is that no system,—whether the one in existence or any to be propounded hereafter,—will succeed perfectly unless it mitigate or remove this evil. The following facts, which bear upon the question as to how far the population is disposed to embrace good schooling when offered to them, are important:—The population of Painswick in the county of Gloucester, at the last census, was 3,464. The number of children between the ages of 3 and 15 is, in 1857, 746, with a decreasing population; they are thus distributed,—

——	At Day School and not at Work.	At Work and not at Day School.	At neither.
Boys - - -	209	76	84
Girls - - -	208	44	125
Total -	417	120	209

The provision for education at Painswick is in all respects of a very superior character, and yet here there appears to be about a sixth of the child population at work and not at school, and between a third and a fourth neither at school nor at work.

Remedy for neglect of education.

But, although it may be true that no system will succeed perfectly, *i. e.* universally, unless it be enforced by compulsory attendance, whether half time or other, there appear to me to be three ways in which the evil may, to some slight extent, be mitigated. Firstly, by throwing open appointments to competition, and by well-conceived prize-schemes. Secondly, by making the schools more practical. Thirdly, by legislating for the vagabonds and idlers. Of the last-mentioned class I shall speak in a later part of my report.

Prize-schemes.

1. Until lately the poor man has had but little inducement to exercise self-denial for the purpose of educating his child. Patronage and monopoly filled up, for the most part, all offices of responsibility and worth. Here and there he heard of some one of the middle or labouring classes rising

above his fellows, and becoming rich or great, but the cases were so rare, and the circumstances accounting for them so exceptional, that he felt little practical interest about it. Let it once be felt throughout the working classes that merit, and not patronage, is the ladder by which a boy may earn greatness or fame, and the first vibrations of a movement will be produced which in time will extend throughout the country. It may be true that not one in 5,000 will carry off a prize, but the simple fact that the prize is open to anyone who can win it will arouse the emulation of all; and each appointment fairly made, upon honest grounds, will have the effect of producing results of incalculable importance. In the higher grades of society, recent measures in opening certain appointments to competition have already produced their first fruits; the same may certainly be expected in any or all the grades, wherever the same principle can be applied. In this light I regard with great hopefulness the examinations of the Society of Arts for degrees; your Lordships' certificates of good conduct; and the appointment to valuable offices, on consideration of merit, as now adopted by some public companies and private firms. I attach much importance, also, to the working of the special prize-scheme associations, which are being established in several of the mining and manufacturing districts of this country. In the Appendix to this Report will be found the prospectus of an iron and coal masters' association for awarding prizes among the schools of the great mining district of South Wales (*see Appendix* B); and also two letters explanatory of prize-schemes recently set on foot in the counties of Worcester and Warwick, viz., at Worcester, Kidderminster, and Coventry (*see Appendix* C.)

Practical and technical instruction.

2. With regard to making our schools practical, although it is quite true that the parents generally have a very partial and imperfect estimate of education, yet it must be admitted that they know, as well as their betters, when it is of practical value in its immediate application; and I have no doubt that those schools in my district which have judiciously attempted to make their instruction bear upon the employments of their respective neighbourhoods are better attended than those which have confined themselves to the mere routine of study founded upon prescription. The strongest instance which I am able to adduce of this is that of the school at Painswick in the county of Gloucester, of which I have spoken before, where, besides a good system of industrial training in carpentering and printing, the school lessons have a practical bearing. The boys are taught to make drawings for carpenters' and masons' work, and they can produce plans which would not discredit many young professors of the art. To this it is that

the enlightened active manager, Mr. Hyett, attributes much of the increased appreciation of the school in the neighbourhood, and the following very satisfactory results :—

	£	s.	d.
The school fees during the past year amounted to	51	18	10
They were in 1855	26	11	0
Increase	£25	7	10

Claims for Capitation fees in 1856	46
Ditto ditto in 1855	26
Increase	20

Some of the boys and girls in attendance are fourteen and fifteen years old,—and two or three of the former will probably be candidates at the examination in geometry and mechanical drawing by the Society of Arts. I would also mention that Euclid is better taught here than in any school in the district. In this district there are employments of very different kinds. Shipping, boating, and marinership on the side of the Severn and Bristol Channel; mining in Monmouthshire, Gloucestershire, Warwickshire, and Worcestershire; gun making and hardware in Birmingham; silk weaving in Coventry; porcelain and glove making in Worcester, &c. Now, without entering into the question of how far it is possible to prepare a child for its future employment by technical instruction at school, it may, I think, be fairly admitted that the course of study for these several localities may be adapted to the prevalent trades in them so as to introduce the children, at all events, to some of the principles upon which they will afterwards have to work; and that such a course of study would have the effect of enabling the parents to form a rough estimate of the value of the schools to their children.

Compulsory attendance for particular class of children.

3. I cannot leave the subject of irregular attendance without stating some of the obstacles in the way of a general half-time system of compulsory attendance which so many deem to be of easy accomplishment. It is frequently assumed that the large manufactures not embraced within the operations of existing acts present the difficulty. This is far from being the case. With them legislation is comparatively easy. Admitting the right of the legislature to interfere with class labour, as already assumed, that right, of course, might be extended to any kind of employment where the children could be discovered and registered. In this way it is possible that some additional half-time measures may be found to be practicable in our colliery, mining, and manufacturing employments. But, when you come to apply the principle generally, the great difficulty occurs. Omitting all consideration of the multitudes of children

employed in agricultural districts,—in small towns—and in country villages, where, among other descriptions of juvenile employment, the very nurse girls must not be overlooked,—our largest towns and most populous employments present perplexities of the gravest possible kind. In Birmingham, *e.g.*, and Coventry, and Bromsgrove, three important towns in my district, the juvenile labour is not carried on only in large manufactories, but often in private houses, where the employer is very commonly the parent of the child. How inquisitive would be deemed the search, how oppressive the power, which would step into a man's own house and forbid him the use of his own child! I do not intend to say that present circumstances would not justify such a measure,—we may easily conceive circumstances which would justify it,—but I foresee an amount of hostility to any measures of this kind which do not make me very sanguine as regards their immediate adoption.

Progress of schools under inspection.

With reference to our progress during the last year, I find that, whilst in 1855 there were 188 teachers employed in 489 school-rooms, there were in last year 192 in the 399 school-rooms reported on. This does not show the full amount of increase of certificated teachers, nor the absolute number no w employed in the district. I have quoted it simply to show an increase. The present incomes of teachers compared with those of last year appear to be thus:—

	£	s.	d.
Average salaries of certificated masters taken in 118 schools, in 1855 - - - - -	88	5	2
Ditto in 1856 - - - - -	87	10	8
Decrease per head - - - -	£0	14	6
Average salaries of certificated mistresses, in 1855 -	57	11	3
Ditto ditto in 1856 -	58	9	1
Increase per head - - - -	£0	17	10
Average salaries of certificated infant mistresses, in 1855	58	15	4
Ditto ditto in 1856	63	1	10
Increase per head - - - -	£4	6	6

I can easily account for the increase of salaries in the school-mistresses from the great demand there is for that class of teacher. But I cannot account for the decrease of salary in the masters, although it is but slight, inasmuch as I understand that the demand for masters, although not so pressing as that for mistresses, still greatly exceeds the supply. It is probable, that accidental circumstances connected with the schools upon which the average has been struck would account for this

decrease. The demand for teachers is a hopeful sign of the progress we are making, and, so long as it continues, we have one certain evidence of the success and extension of your Lordships' measures.

Income of schools.

The average income of schools per scholar in attendance was:—

	£	s.	d.
In 1855 -	1	0	6½
1856 -	1	0	1¾

Nothing, I think, can fairly be inferred from this decrease of income. It may arise from the circumstance before alluded to, or from the reduction of the number of pupil-teachers allowed.

Expenditure.

The same remarks apply to the average expenditure per scholar in attendance, which was:—

	£	s.	d.
In 1855 - - -	1	1	5¼
1856 - - -	1	1	0¾

	£	s.	d.
The voluntary contributions towards the support of the schools reported upon this year appears to be -	10,654	18	11½
And the school-pence - - - - -	5,968	8	3½
Total -	£16,623	7	2

The amount from these two sources in 1855, on 274 schools, was—

	£	s.	d.
Voluntary contributions - - - -	14,630	6	9½
School-pence - - - - -	9,386	5	11
Total -	£24,016	12	8½

i.e., whilst in 1855 the voluntary contributions and school-pence amounted to 87*l.* 5*s.* per school on those reported upon, in 1856 they amounted to 73*l.* 4*s.* per school. This I should regard as an important evidence against the voluntary system in operation, if it could be shown that the averages had been struck from the same schools; but that is not the case, and, therefore, for all accurate conclusions the figures are worthless. They are valuable, however, I think, for the purpose of calling attention, on the one hand, to the amount of pecuniary aid absolutely contributed voluntarily towards the support of our schools; and, on the other hand, to some approximation of the relative amount of voluntary aid as compared with that of previous years, and with that afforded by the State. With reference to the first, whether this amount be considered by financiers an important item in the pecuniary support of schools or not, it must, I think, be regarded as conditional upon the present or some other such system. Rates would, so far as I can see, infallibly dry it up. Considering it merely as an item

of finance, it does not appear to me as important as is frequently assumed. Its great value, in my opinion, is connected with its moral influence upon the supporters of the schools in their several localities, and upon the parents of the children. In this light, if it should ever be deemed expedient to introduce a rate-system, one of the greatest difficulties, I suspect, will be to substitute the great moral element, not only represented, but in a great measure, preserved by these sums. No Government officers radiating from a metropolitan centre, nor mere paid servants of local centres, nor official functionaries elected by ratepayers, can be expected to bring to the work that amount of moral earnestness which has been developed and is represented by the voluntary contributions of the subscribers and the penny payments of the poor parents. At the same time, whatever may be its value in this or in the other mentioned point of view, it is, I think, evident that, independently of all other considerations, if its relative amount is reduced, the existing system must fail.

Age of children.

The average age of the children in the first classes examined during the past year is somewhat under twelve years. In the appendix I have placed a list of seventy-three schools, with the ages of the first classes examined in each of them. (*See Appendix* D.)

Capitation grants.

The per-centage of children claiming capitation grants on the average attendance in schools of which I have taken an account ranges from 10 to 70 per cent. I have again to express my regret at the partial extent of your Lordships' operations. There are, at all events, very many places in which there are inefficient schools. This is the case quite as much in the towns as in the rural districts. How far the extension of the capitation grants to towns will meet the difficulty remains to be seen. I have few statistics to produce on this head. It is much to be wished that a trustworthy inquiry into the educational deficiencies of the country could be made. At present, the statements on this subject are so vague and contradictory that it is almost impossible to arrive at anything like an approximation to the truth.

Church education in diocese of Worcester.

Important measures for promoting Church education have been adopted in the diocese of Worcester, which afford a faint notion of the amount of the deficiencies in some of the agricultural parts of that diocese; but they are not sufficient to enable one to form any correct impression on the subject, nor do they embrace the large and important towns. I think, however, that these measures deserve to be brought under your Lordships' notice. The diocesan inspectors, in their last annual report upon 122 schools,—in which there were present 16,344 children,—state as follows:—"The number of schools visited

in the archdeaconry of Worcester is 83, in that of Coventry 39; 53 of them in the county of Worcester, 69 in county of Warwick; of these there are,—very good, 9; good, 66; moderate, 39; bad, 8." The schools were examined by gentlemen in some instances acquainted with the standard by which Her Majesty's Inspectors test the schools under Government inspection. The report gives no idea of the number of schools not inspected, nor of the districts without schools. Mr. Melville, one of the inspectors, makes the following remarks in his report :—

"1. Number under education relative to population.
"2. Hindrances to education,—
(*a*) Deficient supply.
(*b*) Defective use, through poverty, indifference of parents, &c.
(*c*) Religious differences or conscientious scruples.
"3. Whether free education or payment preferable.

"As to the first he considers, in ordinary cases, the ratio to be about one in eight.

"2. Mr. M. considers the deficiency to be more in the use than the supply of educational means; partly from indifference, partly from necessity, but mainly through the dislike of the employers of juvenile labour.

"Of course many cases of absence from religious scruples might occur, and be unobservable; but, whilst he found many Dissenters' children attending the weekday and Sunday school, without objection, he could only ascertain one case of open remonstrance, and there the parent begged his child might not be taught the Church Catechism or the Ten Commandments.

"3. It is hard to come to a positive conclusion, one way or the other, touching free or paying scholars. On the whole, the payment system has more to be said for it, and is found to work the best. Mr. Melville reports very favourably of the general character of the schools he has inspected. The first class, at least, was almost always satisfactory. St. Martin's school, Worcester, is, at least intellectually, by far the best in the deanery."

I would take this opportunity of expressing my sense of the improved manner in which the diocese of Worcester is working in the cause of education. Besides the system of diocesan inspection, to which I have alluded, and which is conducted generally with considerable ability, and, I doubt not, with valuable results, prize-schemes have been commenced in the archdeaconries of Worcester and Coventry, as already mentioned, and which bid fair to be successful. There is also, at the present time, a committee established in Birmingham, for the purpose of inquiring into the condition of education in that town, and of attempting to provide proper remedies for defects. This committee, although not of a diocesan character, owes its existence to the general interest excited in the diocese, on the subject of education, and to some useful pamphlets written by the Hon. and Rev. G. M. Yorke, the Rector of St. Philip's, the Rev. G. S. Bull, the Rector of St. Thomas', and Mr. Stevenson, of Shirley.

Diocese of Hereford.

I have placed in the appendix a summary of the proceedings of the Hereford Diocesan Board of Education, for which I am

indebted to the Rev. W. Poole, the Secretary. (*See Appendix* E.)

Effects of day schools upon children's character.

It is sometimes asserted that the effects of our schools upon the characters of the children are so slight as scarcely to deserve notice, because they are mere day schools, and that the home influences are the exclusive agents in the matter. It would be a great mistake to underrate the importance of home influence, but no less a mistake, I think, to depreciate the importance of school training, even when that school is a day school. My own experience in this matter is that, as is the master, so is the school. If he be careless and slovenly, however high his attainments, or skilful his methods, carelessness and slovenliness will be the characteristics of his school. If his standard of truthfulness and integrity be high, this standard will be felt and acted up to, more or less, by his scholars, whether they be the children of truthful and honest parents or of liars and rogues. Nor are the precepts taught in school of less importance in determining character. Each precept well planted is a germ which grows, and produces fruit. What is the preaching of the Gospel itself but so much inculcation of precept, whether taught by the history of the life of our great Exemplar, or by the truths which He uttered? I wish not to underrate the mischief of bad home influences; it is very great. I am only vindicating for our day schools that important position, in the work of determining the character of our population, to which they are fully entitled. It would be wrong to leave this part of my subject without alluding to the great moral and religious advantages, in training the young, which the Church schools have derived from your Lordships' encouragement of sound scriptural and religious instruction. I have no wish to speak disparagingly of the discipline of that Church to which I belong, or to point out her deficiencies in not insisting upon some regular and systematic method of instructing the young members of her communion in the doctrines and morals of Christianity; but I cannot doubt that the operations of the Committee of Council have had a very marked influence upon these most important subjects. When first I had the honor to hold my present office, many earnest-minded but prejudiced persons had a suspicion of evil on the part of the Government, on account of the examinations into the religious knowledge of the children, the pupil-teachers, and the masters and mistresses. That suspicion, in this district at least, has, I believe, entirely ceased, and I have no hesitation in expressing my belief that, among the majority of the clergy and the managers, the greatest possible disappointment would arise if there were any diminution of your Lordships' interest in this matter. It is frequently asserted that such

inquiries as are made into the religious knowledge of the poor are not made in the case of the rich. This assertion—alas!—is too true; and the admission of its truth ought to be received as the confession of a great national sin, the results of which may be easily seen in the miserable ignorance of the Bible, not only among boys and girls at public and proprietary schools, in the upper and middle classes, but, among the great bulk of our so-called educated classes. In my opinion, no greater affliction could happen to this country than to have the amount of "scriptural knowledge" in our "national schools" reduced to that which is allowed in some of our most popular "public schools." As to the deteriorating home influences to which our poor children are subjected, no doubt they operate very prejudicially against the precepts and training of schools; and much it is to be desired that better wages,— especially in the agricultural districts,—and better cottages, and more leisure, and more sources of innocent recreation, and less vice, could be obtained. These, however, are subjects with which, in many respects, it is impossible to deal; and we are not to be deterred in our task because we are impeded in it, nor are we to discredit our work because it does not do all that we wish it to do. Our process may, in some respects, be an inverted one, but at least it is a progressive one. The children are insensibly influencing their parents, and "by the mouths of babes and sucklings we are perfecting praise."

Length of school hours.

It is very doubtful whether the usual practice of keeping boys at their lessons in school from five to six hours a day is the best. My impression is that four hours' schooling, with two hours' industrial work, and home lessons at night, would be a much better arrangement; it is tried at Painswick, and at some other places, with success.

Attainments and qualifications of teachers.

In the course of the year I am obliged to listen to many complaints with regard to the standard for teachers' attainments, and some new schemes are in agitation; one, *e.g.*, in Herefordshire, in which it is intended to train mistresses with lower attainments than those proposed by your Lordships, to take small village schools at low salaries. My impression is, that, with the latitude given by the registration examination, by which there are no less than eleven different grades of certificate, it would be impossible to lower the qualifications without stultifying the whole of our proceedings. Another common impression is that the Government ought to afford more aid to schools than is now given. I do not see how this can be carried out. The reply from your Lordships' Secretary to the Hereford Diocesan Board, in Appendix E. before referred to, will illustrate this point.

School management.

I regret that in the matter of school management the laity

are not enlisted by the clergy to more active interest. The management of our national schools has been so often considered as that to which the rector or vicar has sole claim that the laity in many places have ceased to recognize any duty in the matter. It is possible that, if admitted to a larger share of administration, they would be willing to act. Despotic governments may in some particular instances be best, but, as a rule, one may assert that they are not. Clerical despotism is as liable to evil as any other despotism, and in all possible cases should be avoided. The difficulty of inducing the laity to co-operate in management is often placed to the account of dislike to it in the abstract, when other explanations of it might be given. Let the cause be what it may, it is a great misfortune, and I should be glad to see it lessened. One very striking instance of the evil of it has occurred within the last few months at Bristol, where the Rev. A. O. Wellsted, the incumbent of the large district of St. Jude's, informs me that he can find no laymen in the place to co-operate with him in holding the trust of some new schools, in the erection of which he has solicited your Lordships' aid.

School books.

I am not at all clear that the reading-books in use in our schools are well adapted to their purpose. The majority of of them are either extracts from promiscuous authors or compilations upon very many and very various subjects. In this way a child is called upon to read a lesson in geography in page 1, in biography in page 2, and in some other subject in page 3. My own inclination would be to get rid of these compilations and miscellaneous books, as far as possible,—at all events in the first classes,—substituting for them some works of a popular character from some of our best authors. If this were done, the books in most instances would be read by the children over and over again, at their own homes, without the intervention of the teacher; far more interest than there is at present would be felt in the lessons; a taste for literature generally would be encouraged, and an intimacy with good authors, and an affection for them and their works would be produced. Many persons would be surprised to hear that some of the most popular works in the nurseries of the rich, on which their children feast day after day with never flagging interest, are utterly unknown to the children of the poor. Some works of this kind, at all events, might very profitably be substituted for the scraps and shreds of divers unknown authors now in use.

Reformatory schools.

It is with some regret that my connexion with reformatories has ceased. I have taken great interest in them, and feel very strongly the importance of their success. The following convictions I would venture to leave as subjects for consideration

to those who may succeed me in this work :—1. The imperfect manner in which religious truth is made the fundamental ground of hope for success ; the proof of this to be seen in the imperfect means for its practical application. 2. The general absence of recognising mental cultivation as one of the most important means of moral discipline, as well as of religious enlightenment. 3. The necessity of classifying inmates, either by separate wards if in the same institution, or by a division of reformatories into separate classes ; *e. g.*, one class to be for probation, another for slight offenders, a third for determined criminals.

Ragged and industrial schools.

The class of schools called "ragged and industrial" is also, with few exceptions, passing out of my hands. The institution at Birmingham is still very efficient, and a model of its kind. The general defects of these schools appear to be the want of sufficient definite aim in the managers. I sincerely trust that some effective plans may be adopted to relieve the country of those children who belong properly either to this kind of institution or to the reformatory.

Statistics of education and crime.

There has been much discussion lately as to the connexion between education and crime, and great confusion as to the results of our labours, from attempting to test them by criminal statistics. The fact is that our operations generally have little or nothing to do with the class of children that fills the calendars of crime. Some of them, indeed, pass in and out of our elementary schools, but without receiving any permanent influence from them. The greater number are educated in the streets, not only in crime but by crime. Crime is the instrument by which their faculties are developed. Some few of them learn to read and write, either during some temporary attendance at school or in some other way ; but such accomplishments, if not attained for the purpose of crime, are at all events immediately used in it. It is absurd, therefore, to attempt to draw any accurate conclusions, as to the value of education as a preventative to crime, from figures which, so far as real education is concerned, represent nothing. Before the first step can be taken towards an accurate conclusion as to the moral results of elementary education upon the labouring poor, the class of which I am speaking should be removed from the tables, and, when the numbers belonging to this class is considered, at the merely rough calculation which we are able to make, the importance of this point will, I think, be admitted. On the principles of Mr. Horace Mann's calculation we had, in 1851, 4,908,696 children between 3 and 15 years of age. Of these 2,046,848 were at school, and 599,829 employed, and 2,262,019 undescribed ; and, after all deductions for reasonable absences, 1,614,413,—*i.e.* 32 per cent. of children who might be educated,—were totally uneducated. Accepting

this statement, we have some fearful figures to contemplate. Call the 1,614,413 children a bare million; from these again deduct the infants, and all above fourteen years of age, and call the remainder half a million. In whatever way we may treat it, still it must be admitted that there is this formidable interference with all calculations as to the effects of education; a mass of child idleness existing, which is day by day developing into crime; which in fact, if not crime in the blossom, is at least crime in the bud; and which is, not only independent of, but, absolutely hostile to all our educational efforts.

Our statistics of education compared with those of foreign countries.

The same remarks may in their measure be applied to the statistics which, giving the per-centage of children throughout the kingdom under instruction, contrast our educational operations with the returns from other countries. Certain conclusions from these figures may undoubtedly be drawn, but not the conclusions which frequently are drawn, viz., that this kingdom is so far behind other kingdoms in its willingness to *provide* education for the labouring poor, as is represented by the numbers actually at school. The children disposed to go to school in England, or, in other words, the children who do attend school without *compulsory enactments*, are not much more than a moiety of those who would attend if compelled to do so, according to the figures before stated. When therefore, *e. g.*, it appears that only one-eighth of the population in England are under instruction, it is not fair to assume that there is provision only for one-eighth of the labouring poor, or that the supporters of schools are not prepared to educate more. On the contrary, if it can be shown that they now educate one-eighth of a population of which a large proportion refuses to be educated, it is fair to assume that they would educate a number, at the least, much greater than one-eighth, if the children would attend. The point of contrast is not the relative attendance under a paid system and a free system of schools, but the relative attendance under a system of voluntary and a system of compulsory attendance of scholars. If it should ever be possible to deal satisfactorily with the children now utterly uneducated, our educational statistics, in spite of the deficiencies from partial and interrupted education, would not suffer, as they do now, by a comparison with those of other countries. I think that something may be done with that class, at all events. There may be difficulties in the way of applying a compulsory half-time system to children at work; and some arguments may be adduced to show the amount of compensation in hand-labour for the loss of head-work; but these points cannot be urged against the expediency of adopting some stringent regulations with the idle and vagabond class to which these utterly uneducated children prin-

cipally belong. Nobody can say that the cost of production will be enhanced, or that agricultural work will be interferred with, by sending to school the children who are not employed; nobody can assert that idleness and vice are compensations for the loss of school instruction. How far a compulsory enactment would involve a constitutional question I will not undertake to say, but it occurs to me that some little infringement of personal liberty might be conceded, when it is notorious that to a great extent these children are an hereditary caste, the sons and grandsons of thieves; that they form, not only the nursery of crime, but, the Great Tempter's agents, and the training school for vice throughout the kingdom, inoculating and influencing and destroying, year after year, hundreds of those who, but for them, would remain innocent. Self-defence, at least, and the very security of the common weal require some interference on the part of the civilized community. In the appendix I have placed a table showing the number of the juvenile apprehensions and commitments in the borough of Birmingham, for the years 1852, 1853, 1854, and 1855, for which I am indebted to the Rev. G. S. Bull. (*See Appendix* F.)

Industrial work.

The extension of industrial work is making some progress in my district. Additional cases have occurred, and the methods in use are improved. Some of the best instances of this kind are Painswick, already alluded to, Forthampton, Tetbury, (*see Appendix* G. for garden accounts and rules at Tetbury,) Hagley, often mentioned in my former reports, Henley-on-Thames, and a little parish in Warwickshire, where the school is supported and managed by Lady Guernsey. The boys are instructed in gardening by Lord Guernsey's gardener, on certain days in the week, both in their plots of ground and in his lordship's garden; and in tailoring on Saturday afternoons, by the village tailor, who attends for that purpose. It is proposed, I believe, to send them at certain times to the carpenter's shop. The girls are instructed in needlework, washing, ironing, and mangling. The washing is conducted partly by hand, and partly by machine. The washing machine is easily worked by a small child. The heavier articles are washed by the machine; the lighter articles by hand. The woman who superintends this department has the charge of the infants. The parents of the children are allowed to have their clothes washed at 2*d.* per dozen; other persons are charged at a higher rate. This makes the work popular in the parish, and supplies the girls with materials for work.

Importance of industrial training,—especially for girls.

I have no wish to underrate the difficulties of introducing a system of industrial work in connexion with our national schools; but I believe it would be no easy matter to overstate its importance, especially as regards girls. Boys may learn the

nature of some of their future employments in those fields of labour into which they go on leaving school. When they close their books, they begin a course of rough instruction in the nature of land and of animals, in ploughing and "tending," in digging, thatching, reaping, &c. But with girls the case is different. A girl, in very many instances, when removed from school, loses all opportunity of learning those branches of industrial work in which her future life ought to be spent. She is employed, perhaps, as nurse to younger brothers and sisters, or to an infant away from home, or else she enters service with a small tradesman or with a farmer, or at a public-house. Here her employments are of an uniform character, which occupy all her time. She has few opportunities of acquiring a knowledge of such work as cutting out garments, or tailoring, or washing and ironing and mangling, or cooking; and so she passes into a higher situation in service, or into married life. In the former case, she has now to learn how to do many kinds of work with which she ought to have been thoroughly conversant before. Few *men*, I believe, are sufficiently aware of the great domestic discomfort that is produced throughout the country by the ignorance of servant girls in such matters as these of which I am speaking. Inspectors are aware of it, because they are perpetually taxed with the deficiencies of the servant-maids, and are made responsible for all their shortcomings. In the case of marriage, the evil is still greater. An artizan or a labourer, with a wife ignorant of cooking or washing, or making or mending clothes, is subjected to a positive loss, which, in many cases, makes the difference between comparative affluence and wretched poverty; and it is no exaggeration to assert that a great part of the public-house evils of the country arise from the discomfort of wretched homes caused by the wives. There is one part of this industrial work which is frequently overlooked, viz., its importance in forming character. Formation of character should be the most important of educational aims, as it is of educational results. Character is as superior to attainments, as wisdom is to knowledge. Industrial teaching, I submit, has a great influence upon character; so much so that lessons of labour, economy, cleanliness, tidiness, and exactness, learned and practised in the garden, in the carpenter's shop, or at the washing tub or the kitchen grate, would, I conceive, produce effects upon the character which would prove to be valuable to their possessor throughout life. Doubts are frequently expressed as to the possibility of carrying on cookery. On this head I would observe that, in some places, a certain number of girls are selected for the cooking class, who attend one day in the week, and cook their own dinner; the materials being varied. This

plan, I believe, works well. It has sometimes occurred to me to inquire why so few of our schoolmasters practise any industrial work themselves. They belong, very generally, to that class in society which is engaged in manual industry; as boys, many have been employed in such work. One cause I suspect to be the usual training of the pupil-teacher during apprenticeship, and of the student in college. As a rule, in neither of these periods is industrial work practised. The consequence is that, on leaving college, the muscular system and the habits generally are unfitted for bodily work requiring much exertion. If, therefore, it should ever be determined that instruction in manual industry ought to form a part of the peasant's education at school, it would be necessary for your Lordships to encourage it, or insist upon it, on the part of the pupil-teachers and the students in training colleges. I see such clear and unmistakeably good results from gardening, when the master takes to it in earnest, that I cannot but entertain hopes that the practise of this will, at all events, increase. A master with a good garden has, not only a perpetual source of innocent, inexpensive, and healthy recreation within his own reach, but, an easy means of increasing his income. When horticulture is blended with agriculture,—as in the case of Forthampton, where the master, in addition to his garden, has a small farm, with dairy and piggery,—the financial advantages are still greater. Of the disinclination of teachers generally to industrial occupations, I had a striking instance at the recent examination for certificates of merit at Cheltenham. Out of 104 male candidates 4 only, and out of 78 females 1 only, had been at schools where industrial work was attempted.

Schools for farmers, tradesmen, artizans, &c.

I am afraid that, in my district, there are but few instances of schools for farmers, small tradesmen, artizans, and others of that class; and yet it would be difficult to mention any description of school that is more important. The 10*l* householder is not only an important element in our legislative system, but should occupy a prominent place in all measures that concern the common weal. He is the link between the capitalist employer and the manufacturing labourer, between the squire and the peasant. There is no class of society so imperfectly educated, or whose opinions are so crudely formed.

Cheltenham trade schools.

The present Dean of Carlisle has established a trade school for girls at Cheltenham. I have inspected this school twice. The mistress informs me that the greater part of the girls, when admitted, are very ignorant in the common subjects taught in elementary schools. My own impressions corroborate this statement. Their knowledge of Holy Scripture is, in general, very imperfect; and their attainments in arithmetic, and other simple subjects, unsatisfactory. In those cases where

they have received previous instruction, it has been of a flimsy character, simply calculated to produce fallacious appearances, and not to strengthen the intellectual faculties or to form the character. There is also a school of this character for boys at Cheltenham, of which the same remarks may be made. This trade school is used as a practising school for the training college.

Aid to middle schools, and control over endowed grammar schools.

The subject of schools for the middle classes is far too important to be overlooked, and I would venture to express a hope that your Lordships may be disposed to afford to them the benefit of so much of Parliamentary aid as is involved in simple inspection upon invitation. It is much to be regretted that the Charity Commissioners have not full powers to deal summarily with the endowed grammar schools, which would supply much that is wanted for the middle classes, especially for boys. In many instances these funds are now so ill administered as, not only to fail in providing good education for the places to which they belong, but actually to prevent its coming from any other source, and thereby to insure a condition of permanent ignorance and inferiority for the population in whose behalf the endowment was originally bequeathed; as an illustration of this, I add to the appendices a letter from the Earl of Ducie, bringing to light a striking instance of the kind. (*See Appendix* H.) The formation of middle schools in fair sized towns would, I believe, be much easier than is generally supposed. A payment by thirty children of 10*l.* each, or by sixty of 5*l.*, would produce an income of 300*l.* a year,—a sum sufficient to carry on the ordinary expenditure of an institution of this kind. I have received some curious information from other parts of my district respecting this class of society. From an elementary school, where one-sixth of the children in attendance belong to the trade and artizan class, the master writes:—

"My experience with the children of this higher class goes to prove their value as an educational element in the school as regards cleanliness, regularity, and intelligence, arising from their superior home associations; but it is but fair to state that I have never met with such deep deceit, and such deep-rooted idleness, as has been shown by some of this class."

I have the honor to be, &c.

H. W. Bellairs.

To the Right Honorable
The Lords of the Committee of Council on Education.

APPENDIX B.

PRIZE-SCHEME FOR SOUTH WALES.

To Schoolmasters and Schoolmistresses.

1. The attention of schoolmasters and schoolmistresses is called to the subjoined rules and regulations of the Iron and Coal Masters' Association, for awarding prizes in elementary schools for the working classes.

2. Schoolmasters and schoolmistresses, who intend to send candidates to compete for these prizes, are requested to comply carefully with the rules laid down in the conditions of competition, and with the directions of § B.

3. It will be observed, that the competition is open to schools of every denomination, whether under Government inspection or not, provided that they are approved of by some member of the Association.

4. The object of this early notice is, that schoolmasters and schoolmistresses may prepare as many candidates as possible, to take part in the competition.

IRON and COAL MASTERS' ASSOCIATION for awarding ANNUAL PRIZES among the Schools of the MINING DISTRICT, from Dowlais to the to the Taff Vale, Aberdare and Rhonda Valleys inclusive.

President.—THE HONBLE. R. WINDSOR CLIVE, M.P.

Patron.—THE RIGHT REVEREND THE LORD BISHOP OF LLANDAFF.

Honorary Secretary and Treasurer.—GEORGE T. CLARK, ESQ., Dowlais House.

The object of this Association is to induce parents to keep their children at school longer, and more regularly than is, at present, the custom; and to hold out to the children themselves an additional motive to diligence and good conduct.

Conditions of Competition.

1. Candidates to be boys or girls (not pupil-teachers) who have attended for a period of at least two years, an elementary school for the working classes, approved of by some member of the Association.

2. They must be at least ten years of age.

3. They will be required to produce a certificate from their teacher that they have attended the day school at least 176 days during the twelve months ending the 1st June preceding the examination.

4. Certificates will also be required of good character, and of satisfactory progress in religious knowledge, signed by their teacher, and countersigned by their clergyman or minister.

5. All candidates will be expected to read tolerably; to write a fair round

hand; to spell simple words correctly from dictation; and, in arithmetic, to have a fair knowledge of the first four rules, simple and compound.

Those competing for the higher prizes will be examined in decimals and the higher rules of arithmetic, and in grammar and geography.

Girls will be expected to possess skill in needlework, and should bring with them the requisite materials for cutting out and making some article of clothing.

§ A. The above rules have been drawn up with a special view to the first year's examination. In subsequent years it may be judged expedient to modify them.

§ B. Managers of schools, who wish to send candidates to take part in the above competition, must forward, on or before the 1st day of June next, a list of such candidates, specifying the age of each, together with a certificate that the schools are approved of by some member of the Association, to the Rev. H. W. Bellairs, or J. Bowstead, Esq., Her Majesty's Inspectors of Schools, Privy Council Office, London.

§ C. The examinations for the year 1857 will be held at Cardiff, in the month of July next.

The day and hour of the examination will be duly announced by public advertisement.

§ D. Prizes, not exceeding on the whole 100*l.*, of 3*l.*, 2*l.*, and 1*l.* each, will be given to the successful candidates according to their proficiency, as shown by the examinations.

Smaller prizes in addition to the above may also be given on the recommendation of the Inspectors.

The name of each successful candidate will be registered in a book, to be provided by the Association, to which reference may always be made.

A handsomely printed card will be given to each successful candidate, certifying that he has gained a prize. The prizes and the cards will be delivered to the successful candidates at a public meeting, which will be held after each annual examination.

These cards will form a lasting certificate of diligence and good conduct at school, and will be not only a just object of satisfaction to the possessors of them and to their friends, but a valuable testimonial to any employer.

In some parts of the country the employers of juvenile labour have signified their intention of giving a preference to those children who are possessed of these cards, signed by Her Majesty's Inspectors.

The expenses of the successful candidates in attending the examination and the meeting will be defrayed by the Association, together with such other casual charges as the Inspectors may recommend.

§ E. In order to encourage boys to keep up and extend their knowledge after leaving school, to show them the value of good character, and to teach them habits of economy, it is further proposed to offer, in subsequent years, prizes of 5*l.* each, to candidates who pass a satisfactory examination in some one or two books, which may be selected from a list of works to be hereafter advertised, and who can produce certificates, signed by their minister, and also by some member of the Association,—

a. That they have gained one of the preceding prizes.

b. That they are employed in connexion with the works of some member of the Association.

c. That their character is good.

This prize will only be awarded once to the same individual.

The sum will be invested in the savings' bank, in the name of the successful candidate, and at the expiration of two years from its being awarded, the savings' bank book, containing the statement of the original sum and the interest will be given over to him.

If any boy who has become entitled to this sum dies before the two years are completed, the money will at once be given over to the parents.

A printed card will also be given with this prize.

Appendix C.

PRIZE SCHEMES IN WORCESTERSHIRE AND WARWICKSHIRE.

Dear Sir, St. Peter's, Droitwich, 12 December 1856.

In the Archdeaconry of Worcester there are two schemes in operation; (1), at Kidderminster; (2), at Worcester.

The Kidderminster scheme has now been at work nearly four years, in the year 1853-4. The Worcester Board took the subject into consideration; but, before entering upon a scheme for the whole archdeaconry, it was thought advisable first to make an experiment in some one district, and Kidderminster was selected, from the facilities afforded through Mr. Claughton's co-operation and influence; and also because the schools were particularly affected by the demand for juvenile labour.

A meeting was held at Kidderminster in the spring of 1854, at which more than 100*l.* in annual subscriptions was promised for a period of three years, and a local committee was formed, of which Mr. H. Brinton, jun., has been the secretary. This meeting was also attended by two members of the Worcester Board, who were authorized to promise on behalf of the Board an annual subscription of 25*l.* for a similar period.

The area from which candidates might be sent comprised the town of Kidderminster and eight adjacent parishes, but of these parishes two have not availed themselves of the advantages offered by the scheme.

The first examination was held in May 1854; the second in June 1855; the third in June 1856. On the average, candidates have been sent from nine different schools; each candidate has been required to produce,—

(1.) A certificate of regular attendance at school, for boys of twelve years of age, for a period of five years; for boys of eleven, for a period of four years; for boys of ten, for a period of three years.

(2.) A certificate of good character and conduct signed by the clergyman and master of the school.

Examiners have been appointed each year by the Worcester Board. The subjects of examination have been, religious knowledge, reading, writing from dictation, arithmetic as far as proportion and practice, geography, and grammar. Questions which imply an acquaintance with the leading facts of English history have also been incidentally introduced. The candidates have hitherto been examined in three divisions, according to age, of twelve, eleven, and ten and each division has been separately classed according to proficiency, and the class list has appeared in the county paper. The highest prizes have been given to the twelve year boys who have been five years at school. On the average they have received 2*l.* each, the highest prize being 4*l.*, the lowest 1*l.* For boys of eleven and ten the prizes were of smaller amount. The sum of 80*l.* in money and 15*l.* in books has been distributed in this manner, on the average, each year since the commencement of the scheme. In addition to this, each boy (unless his prize was a book) has received a testimonium card.

The objects of this scheme being to induce parents to keep their children at school for a longer period, you will wish to know the result. I send the statistics of the three largest schools at the end.

At the examination of 1854 twenty-seven boys of the age of twelve and upwards presented themselves for examination from nine schools; in 1856 there were sixty-six boys of the age of twelve and upwards from the same number of schools.

The money given in prizes is generally satisfactorily accounted for. In many cases it is placed in the savings bank, in others it is expended in clothing or in the necessities of the family.

Several of the prize boys have become pupil-teachers, others have obtained good situations from parties who rightly regard the testimonium cards as recommendations of a high class. The boys themselves set a high value upon them and bring them with them each year, generally framed and glazed.

Many instances have occurred in which parents have been induced to keep the children an additional year at school in order to enable them to compete for the prizes. In this respect the scheme has undoubtedly been successful; but I cannot speak positively as to its effect on parents, who were indifferent to education. My own idea is, that it has not had much effect upon them.

The Worcester scheme first came into operation in June 1856. Notice was sent by the Diocesan Board to schools in and within nine miles of Worcester that an examination would be held, at which prizes would be given to boys above the age of ten who showed a fair amount of proficiency. They were also required to bring with them certificates of regular attendance for three years, and of good character and conduct from the clergy and masters of their respective schools.

There were sixty-six candidates from thirteen different schools. They were examined and placed in three classes, according to proficiency, irrespective of age.

The prizes consisted of books, which were given by the Diocesan Board. Special prizes were also given by the Dean, by Canon Wood, and by the Rev. J. H. Hastings, and others, to boys who passed the best examination in religious knowledge, arithmetic, grammar, geography, &c. No money prizes were given. It was hoped that the books, from their value as recommendations for employment, would be sufficient inducement.

The prizes were given publicly in the Guildhall at Worcester, the boys and the masters of the schools having been previously entertained at dinner by the Dean and Chapter in the college hall.

The Worcester Diocesan Board are now organizing a plan to extend a system of prize-schemes over every part of the archdeaconry of Worcester. They will probably be in operation in the ensuing year.

Yours very truly,

The Rev. H. W. Bellairs. (Signed) W. Lea.

The following statistics, which have been very carefully drawn out by the masters of the several schools, may be of interest:—

		Yrs.	Mo.
Average Age of the First Class:—			
Stourport School - - -	Christmas 1853	11	3
,, ,, - - - -	,, 1856	11	11
Kidderminster, St. Mary's - -	,, 1853	10	0
,, ,, - -	,, 1856	10	3
,, St. George's - -	,, 1853	10	9
,, ,, - -	,, 1856	12	$2\frac{1}{6}$

		Boys.
Number of Boys on School Books:—		
Stourport - - - -	Christmas 1853	96
,, - - - -	,, 1856	113
Kidderminster, St. Mary's - -	,, 1853	113
,, ,, - -	,, 1856	180
,, St. George's - -	,, 1853	97
,, ,, - -	,, 1856	124

In each case the number of the first class is a little increased. It would now average in the 3 schools 28 in each.

Taking the three principal schools on the scheme the results are:—

The age of the first class has been raised to 11 years $5\frac{1}{2}$ months from 10 years 8 months.

The numbers to 517 from 306.

Shirley Parsonage, near Birmingham,
14 January 1857.

My dear Sir,

I proceed, in compliance with your request, to furnish you with an account of the educational prize-scheme instituted in 1855 by the Coventry Archidiaconal Church Extension Association. If I subjoin the regulations and subjects of examination, and prefix a short statement of the plan on which the examination is conducted, I shall perhaps supply the information required in the most intelligible shape.

I must commence by stating that, with the exception of the borough of Birmingham (excluded from local circumstances), the archdeaconry of Coventry is the area to which the operations of the scheme are limited, and that all parochial schools of the Church of England, whether boys' or girls', within this district are permitted to send as many candidates as they may deem right.

The clerical examiners, of whom there are three, are appointed by the archdeacon, and it is their province to draw up the questions and determine on the marks for each subject and adjudicate the various prizes.

The examination, which is conducted entirely on paper, is held annually early in the season of Lent on the same day throughout the archdeaconry, and at such places within each rural deanery as the different rural deans may think needful and convenient. Previously to the day named the rural deans are supplied with a sufficient number of the printed papers of questions.

On the day of examination the whole of the candidates assemble at ten o'clock in the morning at the different appointed schools, and are allowed three hours for answering the questions on the subjects prescribed by the association. After an interval of an hour such as deem themselves qualified reassemble, and during the two next hours proceed to answer the questions of one of the special subjects for which prizes have been given by private individuals. The subjects selected have been Scriptural knowledge, the Book of Common Prayer, history of the Church of England, catechism, English history, arithmetic, and grammar. A private prize was awarded for good writing and general neatness of exercise, and this year additional private prizes will be contended for by the girls for quickness and neatness in sewing a model shirt sleeve, for darning and knitting, and for marking two or three letters. The adjudication of these last prizes will be decided by a committee of ladies.

The children are seated in alphabetical order, and are permitted to speak to no one but the rural dean, who is present throughout the entire period of the examination ready to reply to fair questions and observant of any attempts at copying or unfair play.

On the day following the examination the whole of the children's papers are remitted by post to the examiners, and, after having been examined and classed by them separately, are again carefully looked over by them collectively, and are then finally numbered and classed in their respective order of merit.

The prizes, consisting of handsomely-bound Bibles and Prayer Books from the Christian Knowledge Society, of money, and of ornamented certificate cards for such as are highly commended, are presented to the children in St. Mary's Hall, Coventry, on the occasion of the anniversary of the Church Extension Association. Last year they were presented by the Venerable Archdeacon, and in the presence of the principal clergy and gentry and teachers of the schools in the archdeaconry.

While the plan was being matured and prior to the examination, many seemingly practical objections were urged against the scheme by friends supporting it in the main. It was alleged as unfair that girls should contend on equal terms with boys; that no allowance or limitation should be made for age; that country schools should have to compete with town schools; and schools not under inspection with such as were. The answer to these objections is to be found in the names of the successful schools and candidates.

Of the twenty-two schools amongst whom the prizes were divided ten were not under inspection and at least ten may be termed rural. Advanced years appear to be the proof rather of neglected early education than of matured intellect and superior proficiency. The girls were competent to hold their place with the boys. In the general examination they secured a fair quota of the prizes, and occupied the second, third, seventh, thirteenth, and seventeenth position in the order of merit. In the examination on special subjects they were still more successful. In the Book of Common Prayer they were classed fifth, seventh, and eighth, while in catechism and Scriptural knowledge, the subjects that demanded the largest amount of intellect, they actually carried off the first prizes; and in the former subjects were also classed in the fifth, sixth, and eighth places, and in the latter subject in the third and sixth places.

Care should ever be taken not to damage an experiment by rating it at more than its worth or by auguring too confidently of its success until it has endured the damaging test of time. I may, however, venture to assert, even after only one year's experience, that this prize-scheme adopted by the Archidiaconal Board has proved satisfactory in result and is hopeful in prospect. For the first time the Church, in her corporate capacity, has summoned her children together to a competitive examination, and upwards of 200 of the most advanced scholars obeyed the call. The examination was searching and minute in the ordinary subjects of an English elementary education, as also in the distinct dogmatic teaching of the Church in her catechism and Prayer Book. As the course extends over three years for the successful candidates, and is defined and progressive, it may safely be predicted, at any rate in regard to these children, that their secular instruction will be something more than a sham (an assertion, alas! too true of the mass that leave our parochial schools), and that their doctrinal training will enable them to prove and hold fast the form of sound words of the communion of their mother Church. While the prizes of the association guarantee general information, the prizes of individuals elicit and foster special talent in particular subjects. Printed copies of the questions and results of the examination are forwarded to every school in the archdeaconry, and thus two objects are effected. Incompetent teachers are furnished with specimens of the standard of information attained in efficient schools, and competent teachers are justly rewarded by a public acknowledgment of their labours and merits before their brethren and the clergy and managers of schools. The certificate of a year's attendance of 176 days required of all candidates is promoting and ensuring regularity at school, and the second and third year prizes (to be obtained only in succession), will retain many for a more lengthened period than would otherwise remain.

I am, &c.

(Signed) Nash Stephenson,
Hon. Sec. to the Coventry Archidiaconal
Church Extension Association.

The Rev. H. W. Bellairs.

Average of Seventy-three Schools	11	11	3

Appendix E.

Hereford Diocesan Board of Education.

The following is a short summary of the proceedings of the Hereford Board during the past year:—

grants have been made towards the erection of schools, but more frequently see
is improving the fittings, and more frequently still towards a better portio
of maps and apparatus.

Board have occasionally, and with good effect, made their assistance equal
on increased subscriptions being furnished by the landowners, the age; t
schools
tions is t
ndowners being generally very ready to aid in school-work.

They have undertaken to contribute towards the expense of several persons in training colleges, and have still nominations open for that purpose.

They have endeavoured to promote the improvement of school-teachers by encouraging the formation of district associations, putting at their disposal a collection of appropriate books, and assembling all the teachers of the district for an annual dinner, at which Her Majesty's Inspector, Mr. Bellairs, was this year present.

Diocesan inspection is in full operation; all schools, with very few exceptions, being open to their visits, so that these inspectors' returns furnish interesting and complete results.

The Board have organised a scheme of examination to extend to all schools in the county. It had to aim at the double object of bringing the examination near to every school, and at the same time securing proper publicity and uniformity of standard.

They have taken steps to give greater efficiency to school libraries, and to increase their number.

They have endeavoured to aid teachers desirous of passing an examination before Her Majesty's Inspectors, by lending them the requisite books, and paying their expenses to and from the place of examination.

Their great difficulty is with the small parishes. They are organizing a plan for training women of sufficiently advanced years to teach efficiently reading and writing in dames' schools, or to act as "work-mistresses" in other schools. The matter has waited for some months, pending a correspondence with the Committee of Council.

The Board having elected as honorary members those gentlemen who have erected schools chiefly at their own expense, they are gratified to find how numerous such instances of munificence have been.

Reply to Memorial addressed to Committee of Council.

Education Department, Privy Council Office,
25 August 1856.

Reverend Sir,

I have the honor to acknowledge the receipt of your letter dated 4 July 1856, inclosing a memorial from the Hereford Diocesan Board of Education.

Their Lordships desire me to request the attention of your Board to the inclosed copy of a Minute dated 29 April 1854.

My Lords are not aware in what sense exactly the term "Dame School" purports to be used in the memorial; but, if it means a school of private adventure, kept in the teacher's own cottage, without proof of her own attainments, and without the appliances needful for instruction, I am not authorized to hold out any prospect of assistance for such schools from the Parliamentary grant.

The recognition of inefficient schools answers no object except that of keeping the need for more vigorous action out of sight.

Supposing, however, as my Lords are willing to believe, that your Board does not mean schools of this kind, but contemplates the provision of proper school-rooms, with a reasonably good supply of furniture, books, and apparatus, under competent mistresses, the Minutes already in force are not inadequate to meet such cases.

Their Lordships cannot do better than refer you to the Dean of Hereford's paper inserted in the *Hereford Times* of the 26th of July, for a general account of the aid which may be had from the Parliamentary grant.

With regard to the application of the Minutes to the county of Hereford, you will see that the Dean points out the necessity of schools for *combined* parishes.

The following calculations (which, of course, are liable to vary in particular instances) may be of use to your Board in its deliberations.

A school-room (only) capable of accommodating fifty children, with the necessary offices, may be built and furnished, so as to fulfil the conditions required by the Committee of Council, for something less than 200*l.*, and a grant of about 80*l.* from the Parliamentary fund may be obtained towards the expense. This valuation is not a low one for the buildings and furniture, but it is exclusive of the value of the land, about giving which there is seldom any difficulty in rural districts. If the plans included a residence, the grant would be about 120*l.*, and the total expense, probably, 350*l.* The pecuniary outlay may be considerably reduced if the farmers will lend their teams for carting materials. The time of building should be adjusted so as to secure this assistance.

With regard to the maintenance of such a school, if as many as fifteen out of the fifty children attended for 176 days in the course of a year, the capitation grant upon them would amount to 4*l.* or thereabouts; and, if the average fee charged equalled 2*d.* per week, and if thirty-five children paid at this rate for thirty-five weeks in the year, the annual sum resulting from this source might be set down at 10*l.*; as much, therefore, as 14*l.* would be forthcoming at this stage of the calculation, independently of subscriptions.

The next point to consider is how to obtain a registered or certificated teacher, without whom pupil-teachers are not allowed, nor the capitation grant continued.

If the teacher in charge of the school were incapable of passing the proper examination, and if a trained teacher were advertised for, a mistress probably would expect not less than 30*l.* per annum, and a master not less than 50*l.*, exclusively of a house rent-free, and of the government grants which they might obtain in augmentation of their salaries or for the instruction of pupil-teachers.

These rates of remuneration are *above* the minimum pecuniary conditions insisted upon by the Committee of Council, but they are rather *below* the average remuneration which trained teachers, in common with other skilled workers, can command in the general market.

The clergyman of a parish is not, however, necessarily driven to public advertisement as the only mode of obtaining a certificated or registered teacher.

It may safely be stated that any one who is fit to continue to hold the office of teacher may, by a moderate degree of private study, under the guidance of an educated person, pass the needful examination, in which the high marks assigned to real proficiency in the elementary subjects ensure success to those candidates who have mastered them, although such candidates may be less well prepared in some of the other branches.

By elementary subjects are understood:—1. Religious knowledge; 2. Reading; 3. Writing; 4. Arithmetic; 5. Grammar and composition; 6. The theory and practice of managing a school. In addition to which a teacher, in order to be able to conduct the instruction of pupil-teachers, ought to have a fair knowledge of English history and of geography, and (if a master) of Euclid.

It is, however, to be repeated that, by the scale of marks in use, a teacher who obtained the maximum in each of the first six subjects might receive a high certificate, or might, although the number of marks obtained therein were considerably lower, be registered, if qualified by age.

Returning now to the supposed case of a school of fifty children, with fees amounting to 10*l.* per annum, let us assume it to be supported by voluntary subscriptions to the extent of seven guineas per annum, and to be under the charge of a mistress, who has a house rent free, and who receives, by help of the capitation grant, conditionally allowed for one year, 20*l.* in salary. As soon as the mistress has passed the examination, the following consequences ensue, viz.; she may receive 10*l.* per annum in addition to her salary, and a pupil-teacher may be apprenticed to her, for whose instruction she may obtain a further sum of 5*l.* per annum, while the stipend of the pupil-teacher is paid entirely out of the Parliamentary Fund.

The accounts of the same school for the next year will then stand as follows :—

Local :—	£.	s.	d.
Fees	10	0	0
Subscriptions	7	7	0
From Parliamentary Fund :—			
Capitation	4	0	0
Augmentation	10	0	0
Gratuity	5	0	0
Pupil-teachers' stipend (annual average)	15	0	0
	£51	7	0

In other words, the local funds for education (17*l.* 7*s.*) are now augmented by a sum nearly twice as great (34*l.*) on the part of the Government; and this consequence follows at once upon proof that the school is in charge of a competent teacher.

In reality, the benefit would be much greater; for, with the improvement of the school, the attendance would improve, thereby adding both to the amount of the fees and to the amount of the capitation grant; nor has the separate assistance, which may be obtained towards the purchase of books and maps, been taken into account.

In all probability, a school which had gained this start would be able, in a few years, to support a certificated master and a sewing mistress, thereby bringing the Minute of 29 April 1854 (already referred to) into play for the older boys. There is no reason why such a school, if sufficiently good to attract the sons of the farmers, should not flourish like your Dean's school at King's Somborne.

Nothing is gained for the improvement of education until good teachers are placed in the schools. This is the point to which the attention of your Board should be turned. As soon as this desideratum is gained, the public aid follows in liberal measure. Your Board might encourage parishes to combine, and, by disposing of a central fund, might contribute towards the erection of schools, or towards the salaries of certificated teachers, in those localities where the greatest difficulty is experienced in taking the first steps. Instead of agreeing to pay the whole salary of a certificated teacher, it would generally be enough if your Board guaranteed the deficiency for two or three years, requiring, as a certain condition of every such grant, strict proof that the most had been made of all local and public means. No pecuniary contribution would, however, be so valuable as to bring clearly before the persons occupying, or interested in the property of, each locality, the urgency which exists for making an effort, and the perfect feasibility of the work so soon as each particular district will earnestly undertake its own task for itself.

I have the honor to be, &c.

(Signed) R. R. W. Lingen.

To the Rev. William Poole, Hentland, Ross.

RULES of the INDUSTRIAL DEPARTMENT of the TETBURY SCHOOL.

1. The gardens to be cultivated wholly by the boys themselves, and at such times as the master shall deem proper.

2. No boy to plant anything in his garden without first consulting the master.

3. The produce to belong to the boys, who are to keep an account of the expense of seeds, &c., and also of the produce. A regular rotation of crops will be enforced, and each boy to find manure for his own garden, and to pay half the rent. Every boy is recommended to plant a few fruit trees (such as currants and gooseberries) in his garden; also to allot a small piece of his ground for flowers, as there will be prizes given for them each year.

4. Trees planted by any boy will be taken off his hands, at cost price, on his quitting the school.

For the promotion of industry and neatness, the following prizes will be given :—

LIST OF PRIZES.

	s.	*d.*		*s.*	*d.*
For the neatest garden, first prize -	5	0	For the best dozen of onions, first prize	2	0
Ditto ditto, second prize -	2	0	Ditto ditto, second prize -	1	6
For the best half-peck of potatoes, first prize - - - - -	2	0	For the best peck of peas, first prize -	2	0
Ditto ditto, second prize -	1	6	Ditto ditto, second prize -	1	3
For the best six parsnips or carrots, first prize - - - -	2	0	For the neatest flower-bed, first prize -	5	0
Ditto ditto, second prize -	1	6	Ditto ditto, second prize -	2	6
			Ditto ditto, third prize -	1	6

The show to be immediately before the harvest holidays.

Appendix H.

Dear Sir, 80, Eaton Place, London, 7 March 1857.

As I have reason to believe that you agree with me in wishing that the Charity Commissioners for England and Wales were invested with ampler and more summary powers, I venture to call your attention to the following case; knowing that in its main features it is sufficiently typical of many endowed educational institutions of the minor sort, and thinking that in its past history and its present operation you may find more than one argument in favour of your proposition.

Towards the end of the 17th century, A—— H——, who, as a boy, had absconded from W——, a small town, of about 1,000 inhabitants, returned in affluence, and (with a benevolence which subsequent events will, I think, prove to have been, if not misguided, at least misapplied) bequeathed a certain amount of property for the establishment and maintenance of a school for the benefit of poor children in that town; at the same time constituting the mayor and corporation the managers of it. Some litigation took place concerning the will, which, with other legal business of the charity, produced no less than ten orders of the Court of Chancery before the year 1700. From the very commencement of the school, abuses and local differences appear to have manifested themselves; for one of the orders alluded to was in answer to a petition from the mayor and corporation, who, while stating that the schoolmaster assumed a tenure of his functions to which he was not entitled by the founder's will, added that, although he was in receipt of an ample salary, he had only five or six boys in the school, and that of these he had broken the arm of one, and pulled off the ear of another. The counter-petition, on the part of the schoolmaster, retorted that the mayor and corporation, in appealing to the Court of Chancery, were actuated only by a desire to appropriate the funds of the charity to their own uses. The Court of Chancery confirmed this schoolmaster in his post for two years; at the expiration of which period he would, according to the founder's will, be subject to re-election. In spite of these proceedings, he appears to have retained his post until his death in 1720; and an explanation of his reconciliation with the mayor and corporation may be found in the fact that, in 1734, some of the inhabitants of W—— stated, in an affidavit, that he had given a bribe of 30*l.* to the mayor and corporation; while, for the four or five years preceding his death, he had had no scholars, and had been permitted to convert the school-room into a thrashing-floor. The same affidavit stated that the succeeding schoolmaster obtained his post by a bribe of 25*l.* In 1693, the Court of Chancery, with a view of checking abuses, elected five of the neighbouring gentry, who, with the mayor and senior alderman for the time being, were constituted trustees of the charity. Thus early was the founder's will (by which the trust was vested in the mayor and corporation alone) set aside. In 1696, an order in Chancery directed the trustees, with the mayor and corporation, to consider, and submit to the Court of Chancery, a scheme for the government of the school. This, however, the mayor and corporation, jealous of an interference with their presumed rights, refused to do. In 1734, certain inhabitants of W——, complaining of great abuses on the part of the schoolmaster, petitioned that a sufficient number of neighbouring gentry should be elected to act with the mayor and corporation, the previous trustees being all dead. An order was granted, and one of the Masters in Chancery was directed to select five gentlemen. This order, however, was never acted upon, and the charity continued in the hands of the mayor and corporation until 1806. In 1806, on the expiry of certain leases, one M—— came to W——, and, after having entertained some of the aldermen at dinner in a neighbouring public house, prevailed upon them to renew these leases to him. The other aldermen, justly indignant, petitioned the Court of Chancery to set aside these leases, and to appoint proper persons from the neighbourhood to act with the mayor

and corporation in the management of the charity. The litigation in this affair (in which the petitioners were defeated as to the leases, but successful in procuring five gentlemen as trustees) lasted until the year 1815, and cost no less a sum than 1,000*l.*, which was not paid off until 1820. In 1834, Mr. G——, of W——, with the concurrence of the mayor and corporation, presented a petition to the Court of Chancery, in which certain reforms were prayed for; among them the appointment of trustees to fill up death vacancies. The prayer of the petition was acceded to, and a considerable and beneficial change took place. A scheme of education also was adopted, which, although objectionable in one or two matters of detail, was upon the whole satisfactory. In 1856, the trustees, with one exception, being all dead, the Court of Chancery was petitioned to elect fresh ones, and upon this occasion they departed from their previous custom by electing as trustees two persons who were or had been aldermen of the town. The rector of the parish and a neighbouring proprietor were at the same time elected. The surviving old trustee, now living at a great distance, is never likely to attend the meetings; and the consequence is that the two first mentioned trustees, who are closely related to the mayor (an *ex officio* trustee, representing the corporation, and by his office assuming a casting vote) can at any moment outvote the other trustees, even if the old trustee were present. It appears therefore, that, in spite of 160 years' experience, during which there have been no less than five periods of litigation, of various duration and cost, the prospects of the charity are not much better than they were in 1690, and the power of the mayor and corporation, against which so many appeals have been made, and which has proved so prejudicial to the cause of education, is again firmly established. The net income of the charity is about 130*l.* per annum, a sum sufficient for the salary of the schoolmaster and mistress, but not adequate to the extra expense which attends the election of trustees, and utterly inadequate to the burden of placing the school premises in an efficient state. The premises, according to the testimony of Her Majesty's Inspector of Schools, are in a condition, and of a construction, unfit for the purposes to which they were originally designed. It is scarcely necessary for me to enter into the defects of the general system adopted at this school, except to mention that boys are not permitted to stay after attaining the age of fourteen years, and that the number in the whole school is never to exceed forty; the effect of which is that the number of boys educated at this school is just sufficient to prevent the establishment of another school, and yet not sufficient to provide for the education of all the boys belonging to the town and neighbourhood. I find an actual record of no less than twenty-five orders and decrees emanating from the Court of Chancery; and I find evidence of the existence of other similar documents which appear to have been lost. Litigation upon various subjects appears to have extended over twenty years. These are some of the facts which, I think, show that a less costly and a more summary action than that of the Court of Chancery is required in dealing with cases of this kind; and, in the event of the Charity Commissioners being invested with sufficient powers, I cannot but think that, in addition to gaining the advantages of greater simplicity of action, and less costly proceedings, the Commissioners would be found to act generally upon some fixed principle, and would not reverse—as the history of this charity shows that the Court of Chancery has reversed—a practice which long experience has shown to be the only way of meeting certain abuses. I beg leave to call your attention to the foregoing statement, knowing that it is not in your power to offer any direct assistance, yet hoping that an acquaintance with the case may tend to confirm you in your opinion, and may encourage you to use the influence which your official position ensures to you in urging the introduction of a further reform in the mode of dealing with charitable trusts.

Believe me, &c.
(Signed) Ducie.

To the Rev. H. W. Bellairs,
Her Majesty's Inspector of Schools, &c.

GENERAL REPORT, *for the Year* 1856, *by Her Majesty's Inspector of Schools, the* Rev. FREDERICK WATKINS, B.D., &c., *on the* CHURCH OF ENGLAND SCHOOLS *inspected in the County of* YORK.

MY LORDS,

Review of work of inspection.

MY colleagues (Rev. W. W. Howard and Rev. A. R. Grant) and myself have been employed during the last official year in inspecting schools connected with the Church of England, in Yorkshire; in preparing and revising examination papers; and in the manifold duties of Her Majesty's Inspectors of Schools in that great county. The nature and extent of our work, and the employment of our time, is shown in a table (No. 1, in *Appendix* B.) appended to this report, and in statements made below. The particular account of each school inspected is given in our Tabulated Reports, printed separately for distribution in my district. I proceed, therefore, here to lay before your Lordships the general results of our inspection.

Additional schools under inspection.

With regard to what may be called the *machinery* of education, there is a steady and satisfactory increase in my district. Thirty-two schools have been added to my list during the official year.

New school buildings and internal improvements.

New buildings,—most of them handsome in appearance and spacious and convenient in arrangement,—have been completed at nine places, and are in the course of erection at seven other places. Some of these are very important works. One at St. Peter's, Leeds, will probably not cost less than five thousand pounds. Considerable additions and improvements have been made in nine localities. In several rooms much attention has been paid to improved ventilation and heating apparatus. There are, however, yet many schools which are extremely deficient in both these points. There are also several places where the rooms are either insufficient in size, inconvenient in form, or otherwise unfit for the higher requirements of elementary education in the present day. I append lists of all the cases mentioned above (*Appendix* B.)

Increase and improvement in staff of teachers.

With regard to the *working power*, I can report a satisfactory increase in quantity, and, it is not unfair to add, improvement in quality. By this I mean that teachers are now better trained for their duties, and have larger and more thorough knowledge of their subjects of instruction than they had a few years ago. The number of certificated teachers in my

district has increased (about 17 per cent.) during the last year, from 264 in 1855 to 309 in 1856. The number of assistant teachers has also become larger; rising from 22 to 27 (about 18 per cent.). The pupil-teachers have risen from 693 in 1855 to 802 in 1856, an increase of 15 per cent. So far, then, there seems to be cause for satisfaction and prospect of improvement.

Attendance at school.

There are, however, other points which, if not absolutely discouraging, are at least of doubtful interpretation. First, I observe that the number of children in attendance at school during the last official year is not so great as in the preceding year. During 1856 the attendance has only been 61 per cent. of the accommodation provided. In the year 1855 it reached 63 per cent. The decrease, though not large, is unsatisfactory. The more important and significant result obtained by the inspection of last year is *that* with regard to the age of the children and the duration of their schooling. Year after year I have laid before your Lordships lengthened statements on this subject, which is, indeed, the most important with which we have to deal. I regret that the report of this year is again unsatisfactory, and shows that the evil is not only not arrested, but that it is increasing. The state of the case is as follows:—

Age of children.	1855.	1856.
Under 7 years of age	25·89 per cent.	36·84 per cent.
Under 10 „	66·45 „	71·87 „
Above 10 „	33·55 „	28·13 „
Above 13 „	4·44 „	3·65 „

And this return is the more striking when I state that of the schools from which it was taken 15½ per cent. in 1855 were infants' schools, and only 14 per cent. were of this class in 1856. We should, therefore, be justified in expecting a smaller (in proportion) number of very young children in this year than in last.

Stay in school.

If we turn to the other head, the stay of children in their school, the return is not much more satisfactory.

Children who have been in school	1855.	1856.
less than 1 year	46·07 per cent.	47·54 per cent.
„ who have been 1 year	22·94 „	21·54 „
„ „ 2 years	13·51 „	13·8 „
„ „ 3 „	8·48 „	8·07 „
„ „ 4 „	5· „	5·03 „
„ „ 5 „	4· „	4·02 „

It is hardly necessary to say that these returns show the state of elementary education in Yorkshire to be unsatisfactory,

and especially so because the evil lies at the very root of the whole matter. It is a radical, deeply-seated, and widely-spreading evil, not at all confined to my district, but nearly, if not quite as mischievous in all parts of the country. Is there any remedy for it? what is the remedy? are the most important questions that we can ask. The man who answers them practically will deserve well of his country. The cause of the evil is patent. No one at all conversant with the subject ever doubts that it is not the payment of the school fee which keeps the child away from school, or shortens its stay at it; but it is the larger and (to the parent) more touching consideration of the gain or loss of his child's wages. It is not 2*d.* or 3*d.*, or 4*d.* per week, which the parent is either unable to pay, or grudges to pay; but it is the sum varying from 2*s.* to 12*s.* (and even more than this), which he thinks more valuable than his child's education. It is a question entirely of present profit or loss, of paying or receiving money. So far as this, then, it regards the parent and the child; the advantage or the mischief done to the individual only. But it is not really a question of individuals; it is a great national question, which puts itself plainly in this shape: How can the child-labour, necessary in the working of this great country, be supplied with fairness to the employer and justice to the employed? Would compulsory education effect this end? I have gone largely into the subject of children's wages, as affecting the school apprenticeship, and I think it is difficult to deny that compulsory education in the manufacturing and mining districts, where child-labour is much used and highly remunerated, is practically impossible. I mean by this expression, compulsory attendance at school until the age of thirteen or fourteen years, *i.e.* about five times as long as the usual school-stay now is, and continued for about three years after it now ceases. For I conclude that no compeller of education would venture to affix a higher penalty for the infraction of the education law than a fine, and that not of very large amount. This is the case in Prussia, and wherever the circumstances of Prussia at all resemble those of the districts of which I am speaking, there the education law is broken, and the fine paid over and over again. A parent could afford to do this out of the high wages of his child, rather than lose the whole of the wages. A statement has been made, which seems incredible, that in the town of Elberfeld, with its population of 40,000, there were in one year 12,000 convictions of parents for breaking the educational law, and preferring to pay the fine imposed upon them. Even allowing for considerable exaggeration here, one may fairly conclude that in that district, where child-labour is valuable, the law was broken continually and contemptuously.

Nor can anyone doubt that something of the same kind would happen in manufacturing Yorkshire. And what, we may well ask, would be the moral effect on the minds of the people living under a law which they hated as much as they despised, which they evaded whenever they were able, and broke whenever they could afford it? But, if a compulsory enactment be impracticable or highly inexpedient, is there nothing that can be done to increase the age and lengthen the stay of children in the elementary schools of the country? No one who knows the present state of the case can either be satisfied with it or rest content without some attempt to improve it. Many such attempts have been made. Prizes, varying in value and differing in character, have been given in some districts. Scholar's certificates, which I had the honor of proposing to your Lordships, have been tried with fair effect, considering the short time that they have been known to the country; and night schools, under different circumstances of discipline, attendance, and instruction have been established in many towns, and in some of the large manufacturing and mining villages. Let me say a word on each of these heads.

Prize-schemes.

With regard to the first of them, viz., prizes, there has been little done hitherto in my district, except by private management. In many schools the managers and patrons give a quantity and variety of prizes, either after, or without, an examination. For this purpose books are usually given, sometimes money. In either case, I am inclined to think that no permanent good arises. If the prizes be few, the majority of the children fail to get them, and, consequently, their parents are dissatisfied and envious, while the receivers are proportionally elated. And if the prizes be many in number they seem to lose their character as prizes, and to degenerate into an uncertain and very questionable method of paying the scholars for attendance at school. I have never been able to ascertain, in any case where prizes were thus given, that they had produced any decided effect in lengthening the stay or increasing the regularity and punctuality of the children's attendance. Two associations for the purpose of giving prizes to the children of workmen in the coal and ironstone mines are being formed in the northern and southern parts of the great Yorkshire coalfield. The northern district contains the large towns of Leeds, Bradford, Wakefield, and Dewsbury; the southern has within it—Sheffield, Rotherham, and Barnsley. In their present state, it would be premature to say more than that they are to be established on the same principles, and under much the same rules, as those which have already produced some good effect in Staffordshire and Shropshire. Certain modifications of the rules have been made to

suit the character of the population and the nature of their work. Committees of intelligent and practical men have been appointed, and the most influential proprietors of the two districts have signified their desire to encourage and assist the good attempt.

Scholars' certificates.

Under the second head of Scholars' Certificates, I have to report that they have been given in twelve schools in my district, viz. :—

	No.		No.
Horbury - -	3	Brampton Bierlow -	1
Elsecar - -	2	Leeds, Newtown -	2
Leeds, St. Peter's -	1	Ripon, Cathedral -	2
Leeds, St. George's -	4	Lockwood - -	1
Wentworth - - -	4	Slaithwaite (Lower) -	7
Wentworth (Barrow) -	3	Denby Grange - -	2

making a total of thirty-two children (twenty-one boys and eleven girls), who, in a period of three months—during which time only they have been obtainable,—have been recommended by the managers of schools for this distinction. It would be unwise to speak confidently of the result of this experiment, which has yet had so short a trial. But one thing may fairly be said of it,—that it draws out to public notice, and rewards, with no invidious distinction, those children whose conduct is exemplary, and whose progress is creditable; that it substitutes no false motive for the right one of endeavouring to do duty; and that it does not tend to impress upon the youthful mind that money and money's worth are the "be-all" and "end-all" of this life; but that there are, in every class of society, better and higher rewards than pounds, shillings, and pence. I have no sympathy with the movement that has been made in Birmingham, and elsewhere, to attach a certain money value to these scholars' certificates. That they have a money value is undeniable—*that* value which a good character always commands—and for which, as the story goes, the notorious Colonel Charters declared that he would give ten thousand pounds. But I desire—and surely the thing is not impossible—to make school children feel that the better part of the school certificate is that which money cannot buy, and which cannot be sold for money.

Night schools.

Under the third head, of Night Schools, as a means of supplementing the deficiencies and shortness of day instruction, I have little to report. Only two such schools in my district have, as yet, applied for assistance under your Lordships' late Minute. I have before pointed out the practical difficulty of inspecting these schools, both in enforcing the attendance of the scholars at the time of inspection, and in ensuring their willingness to be examined when present. At Mr. Akroyd's

establishment at Haley Hill—where everything is done both liberally and thoughtfully—a judicious division has been made, since my last visit, of the older from the younger scholars. In both divisions I found no difficulty in my examination, but great interest in it, and readiness to answer the questions proposed. I believe that, at present, the night schools in my district contain only a moderate per-centage of those for whom they are intended. There are some branches of labour, such as potteries, glass-furnaces, ironworks, collieries, which unfit those who are employed in them for any exertion either of body or mind after the day's work is over. Sheer exhaustion seems to demand entire idleness, or it leaves a craving for unhealthy excitement, rather than for steady employment. The most interesting attempts that I have seen in Yorkshire to remedy this evil are in an evening school supported and directed by Mrs. Martineau, at Whitkirk Vicarage, for lads and young men employed in the neighbouring collieries (*vide Appendix* C.); and in a sewing school for factory girls at Leeds, supported and most kindly superintended by Mr. and Mrs. George Hyde (*vide Appendix* D.) In both these places the influence of the cultivated mind upon the uncultivated, and the true sympathy of the higher with the lower class of life have produced decided effects, *educational* in the true and highest meaning of the word.

Apprenticeship of pupil-teachers.

The subject to which I particularly wish to draw the attention of your Lordships is the disadvantage under which, in the manufacturing districts, the school apprenticeship lies, and the many and great hindrances which beset it. During the last year I have made inquiries on this point in the chief manufacturing towns of West Yorkshire, and have received returns from persons in them well qualified to give the requisite information. From Leeds and its neighbourhood, from Sheffield, Halifax, Huddersfield, Bradford, Rotherham; from several of the large manufacturing villages; the principal coalfields, ironworks, potteries, and glassworks, I have obtained reports in several instances from the employers of labour, in all cases from persons whose situation enables them to judge fairly, and whose intelligence makes their testimony very valuable. In order to appreciate this evidence rightly it will be necessary to bear in mind that the salaries of pupil-teachers, considered as weekly payments, stand thus:—

Boys and girls,	14	years of age,	3*s.* 10*d.*	per week.
,,	15	,,	4*s.* 9½*d.*	,,
,,	16	,,	5*s.* 9*d.*	,,
,,	17	,,	6*s.* 8¾*d.*	,,
,,	18	,,	7*s.* 8¾*d.*	,,

The apprenticeship commences at the age of thirteen, but all payments are made at the end of the year.

From Leeds my correspondent writes:—

"I find the rate of wages given to lads and young men in this neighbourhood in mechanics' shops commences with:—

3*s.* per week at 13 years of age.
4*s.* „ 14 „
5*s.* „ 15 „

increasing 1*s.* per week every year until the age of twenty-one. This may appear to be low, and it certainly struck me as such. But, in the first place, the boys are considered to be *learning* a *trade*, which a pupil-teacher is not thought to be doing; and, in addition, the clothing of a pupil-teacher is considered to cost more than if he were working at a trade."

Again Mr. —— has furnished me with the following memorandum of wages, per week of sixty hours, paid to young people in Messrs. —— works:—

	Boys.	Girls.
13 years of age,	3*s.* 10*d.* to 4*s.* 0*d.*	3*s.* 9*d.* to 4*s.* 0*d.*
14 „	4*s.* 2*d.* to 4*s.* 4*d.*	4*s.* 0*d.* to 4*s.* 3*d.*
15 „	4*s.* 6*d.* to 5*s.* 0*d.*	4*s.* 4*d.* to 4*s.* 9*d.*
16 „	5*s.* 6*d.* to 6*s.* 0*d.*	4*s.* 9*d.* to 5*s.* 0*d.*
17 „	- - - -	5*s.* 0*d.* to 5*s.* 6*d.*
18 „	- - - -	5*s.* 6*d.* to 6*s.* 0*d.*

The usual wages of young people in other parts of Leeds are these:—

Trades, &c.	Salary.	Age.
Grocers' errand boys	3*s.* 0*d.* to 7*s.* 0*d.*	12 to 16 years.
Hatters' „	3*s.* 6*d.* to 8*s.* 0*d.*	12 to 16 „
Drapers', &c. „	3*s.* 6*d.* to 12*s.* 0*d.*	12 to 19 „
* Butchers' „	4*s.* 0*d.* to 8*s.* 0*d.*	13 to 15 „
* Butchers' apprentices	4*s.* 0*d.* to 16*s.* 0*d.*	15 to 21 „
Mechanics' „	5*s.* 0*d.* to 12*s.* 0*d.*	13 to 18 „
Whitesmiths' „	5*s.* 0*d.* to 12*s.* 0*d.*	14 to 21 „
At foundries (not apprentices)	5*s.* 0*d.* to 18*s.* 0*d.*	13 to 18 „
„ Mills „	4*s.* 0*d.* to 10*s.* 0*d.*	13 to 17 „
„ Chandlers „	4*s.* 0*d.* to 10*s.* 0*d.*	12 to 15 „
„ Warehouses „	4*s.* 0*d.* to 16*s.* 0*d.*	13 to 18 „
„ Carver and gilders „	3*s.* 6*d.* to 10*s.* 0*d.*	14 to 21 „
„ Shoemakers „	4*s.* 0*d.* to 10*s.* 0*d.*	13 to 21 „
„ Plasterers „	4*s.* 0*d.* to 12*s.* 0*d.*	14 to 21 „
„ Masons „	4*s.* 0*d.* to 12*s.* 0*d.*	14 to 21 „
Printers' apprentices	4*s.* 0*d.* to 10*s.* 0*d.*	14 to 21 „

N.B.—The advantages of working and being paid for overtime are considerable. Some of the lads will occasionally double their wages. So much is to be made in the way of jobbing that there is a general complaint among the masters that lads for regular apprenticeship are difficult to obtain.

The following statement is from Messrs. Walker, among the largest employers of labour in Bradford and its neighbourhood:—

* Intelligent likely lads are well paid here—some of them at 16 years getting 14*s.* per week.

"In answer to your inquiry, I beg to annex what I believe te be a fair average of the rate of wages earned by young persons from thirteen to eighteen years of age, when employed in factories. I might add that in many cases these rates are much exceeded by some weavers (a large class), for at my own works at Clayton, about a month ago, I was standing near the person who was taking in and examining the "pieces" of several girls. After expressing my satisfaction with the goods (the work being well done), I inquired of the book-keeper the ages and wages earned by these three weavers for a month past, which I found to be 13*s.* 6*d.*, 14*s.*, and 14*s.* 6*d.* per week, or rather over. Their ages were respectively 15¼, 15½, and 16 years.

"The rates annexed are, however, the most correct, as an average, that I am able to make out:—

	13 Years.	14 Years.	15 Years.	16 Years.	17 Years.	18 Years
	s. *d.*	*s.* *d.*	*s.* *d.*	*s.* *d.*	*s.* *d.*	*s.* *d.*
Boys' wages per week -	4 9	5 9	7 0	8 0	9 0	10 0
Girls' wages per week -	5 0	6 0	7 6	8 6	9 6	10 6

"I am quite satisfied that the great difficulty of obtaining pupil-teachers arises from the fact that the parents are unwilling to accept the lower rate of remuneration given when they are apprenticed, and it is to be lamented that they do not regard the *future advancement* of their children so much as a *present income* for their labour. But so it is."

From the same neighbourhood I have the following return of the payment of other kinds of labour:—

Better Bed.

"Colliers, 13 to 15 years of age, 9*s.* 6*d.* per week of five days.
" 15 to 18 " 14*s.* 0*d.* "

Black Bed.

Colliers, 13 to 15 years of age, 7*s.* 6*d.* per week of five days.
" 15 to 18 " 12*s.* 0*d.* "

"These wages are taken at an average. It is impossible to give the accurate weekly amount.

"In the ironworks I think you may take the wages of boys—
13 years of age, 9*d.* to 1*s.* 2*d.* per day.
15 " - - - 1*s.* 4*d.* "
18 " - - - 1*s.* 9*d.* "

Females. Average.

"In our factories—spinners, 13 years of age, 5*s.* 6*d.* per week.
" " 15 " 6*s.* 6*d.* "
" weavers, 18 " 12*s.* 6*d.* "

The return made to me from Sheffield is very full and accurate. There is much more employment there for boys than for girls, and there has consequently been always much less difficulty in obtaining the latter as pupil-teachers in the schools.

AVERAGE EARNINGS per week of Boys and Girls, when prices are good and plenty of Employment, in the several Branches in the SHEFFIELD TRADE.

Trade, and Branch thereof.	Boys or Girls.	Age and under.	Amount.	Observations.
Penknife cutlery	Boys	13 to 15	5*s.*	
„	„	15 „ 18	8*s.*	
Penknife grinding	„	13 „ 15	7*s.*	
„	„	15 „ 18	12*s.* to 14*s.*	
Penknife blade forgers	„	13 „ 15	5*s.*	
„	„	15 „ 18	10*s.*	So much depends on skill in this branch, that a boy at 18 will sometimes earn as much as 20*s.* a week.
Rasor grinding	„	13 „ 15	7*s.*	
„	„	15 „ 18	12*s.* to 14*s.*	
Cutler's rasors	„	13 „ 15	7*s.*

Table knife hafting	Boys	13 „ 15	6*s.*	
„	„	15 „ 18	10*s.*	
Table knife grinding	„	13 „ 15	10*s.*	
„	„	15 „ 18	15*s.*	
Forks, filing	„	13 „ 15	5*s.* 6*d.*	
„	„	15 „ 18	7*s.* 6*d.*	
Forks, forging	„	17 „ 18	10*s.*	No boys work till 17.
Forks, grinding	„	13 „ 15	10*s.*	Very dangerous.
„	„	15 „ 18	15*s.*	
Finishing and burnishing	Girls	13 „ 15	3*s.*	
„	„	15 „ 18	6*s.*	
Brittania metal	Boys	13 „ 15	7*s.*	
„	„	15 „ 17	10*s.* or 12*s.*	
„	„	17 „ 18	16*s.* to 20*s.*	
„	Girls	13 „ 15	4*s.*	
„	„	15 „ 18	6*s.*	In some branches as much as 8*s.*
Silver plating	Boys	13 „ 15	7*s.*	
„	„	15 „ 17	10*s.* to 12*s.*	
„	„	17 „ 18	16*s.* to 20*s.*	
„	Girls	13 „ 15	4*s.*	
„	„	15	8*s.* to 18*s.*	Girls at 15 can do women's work, earnings depend on ability and quickness.
Handles, cutting wood	Boys	13 „ 15	10*s.*	
„	„	15 „ 18	15*s.*	

It must not be understood that the whole of the above earnings are paid to the boys and girls; but as regards boys, they receive on an average 7*s* or 8*s.* per week for maintenance, with pocket-money varying from 6*d.* to 2*s.* 6*d.* or 3*s.*, according to state of trade, good conduct, &c., the remainder is the profit retained by the party to whom the boy is apprenticed.

The statement from one of the large manufacturing villages, in the neighbourhood of Huddersfield, is as follows, from the Rev. T. B. Bensted:—

"I have taken two or three days to obtain the information which you desire, in order that I might, by comparing statements, be more accurate. I think that I can also give you other information, which, conjointly with the rate of wages, will show the reason why Yorkshire parents are backward in accepting our offers of receiving their children as school-apprentices.

		Wages per week.	Age.
Male and female	Billy-piecers	4*s.* 6*d.*	13 to 15 years.
„ „	Mule ditto	5*s.* 6*d.*	14 to 17 „
Males	Tail-enders	5*s.* 0*d.*	14 to 16 „
„	Scourer's boy	6*s.* 0*d.*	15 to 17 „
„	Giggers	6*s.* 0*d.*	14 to 17 „
„	Teesers	7*s.* 0*d.*	16 to 18 „
Females	Feeders	7*s.* 0*d.*	16 to 18 „
„	Healders	7*s.* 6*d.*	15 to 17 „
Males	Dyer's boy	7*s.* 0*d.*	15 to 17 „
„	Presser's boy	7*s.* 0*d.*	15 to 17 „
Male and female	Weavers	9*s.* 0*d.*	16 to 18 „

"By a comparison of these wages with the grants made to pupil-teachers there appears to be, in some cases, only a very small advantage on the side of the factory wages; but they are paid every week. The grants are annual, and, I fear must be so. But the parents scarcely know how to wait so long. Could they be paid quarterly?

"Another reason of backwardness is this—a pupil-teacher leaves his father's house at 18, and must for two years more entail expense upon his father. A factory 'lad' will bring his wages into the family from 18 years of age up to 22 or older. The same may be said of a 'lass.' These wages, in the case of males, will go on increasing to 14*s.*, 16*s.*, 18*s.*, 20*s.*, and sometimes 24*s.* per week. I think the backwardness of which we complain might in part be removed, by increasing the grants to an amount equivalent to 5*s.* per week for the 1st year, 6*s.* per week for 2nd, 7*s.* per week for 3rd, 8*s.* per week for 4th, and 10*s.* per week for the 5th year of the apprenticeship."

From the hardware district about Rotherham the following statement has been sent to me:—

"I have made inquiry respecting the wages of young persons at several manufactories in the town (Messrs. Sandford and Owen; Yates, Haywood, and Co.; Corbett and Co.; Smith, Dymond, and Co.; and Guest and Chimes; Messrs. Hazlewood, &c.) Mr. Haywood gave me the enclosed document, but stated that many of their workmen employ their own boys, who work at piece-work, and earn from 2*s.* to 3*s.* per week more than the firm gives to its own apprentices. The same scale of wages is paid at five other firms to their own apprentices; and the same remark respecting piece-work applies to these firms. Mr. ——, of the firm of ——, kindly shewed me their wages-book, in which I saw that one youth, about 18 years of age, had earned 4*l.* in three weeks, and there were several others about the same age, earning about the same wages. I also saw that many of their workmen are receiving from 2*l.* to 2*l.* 10*s.* per week. There is scarcely one youth in fifty completes his term of apprenticeship at the scale of wages entered on the indenture, as it is the custom of the town for the masters to give their apprentices the privilege of piece-work when they arrive at the age of 17 or 18. The effect on the morals of these youths by the high scale of wages is in almost all cases decidedly bad. One youth, only 18 years of age, who had earned in four weeks the sum of 4*l.* 16*s.* 4½*d.*, is living with a married woman, whose husband has left her in consequence. This wretched pair pass their evenings and Sabbaths in drinking from public-house to public-house.

"At the flax mill they chiefly employ females, and their wages range between 2*s.* 9*d.* and 9*s.* per week. There are girls, of 14 years of age, earning 9*s.* per week, and there are others (new hands), 16 or 17 years of age, earning from 4*s.* to 5*s.* per week; but the wages of females, between the ages of 13 and 18, range between 3*s.* and 9*s.* per week, according to their skill and the time that they have been employed.

"Scale of Wages in Stove, Grate, and Brass Works, Rotherham, of Boys and Young Men (if under 13 years 6 months of age to be taken as 13 years old, if above 13 years 6 months, to be taken as 14 years old).

(1.)	s.	d.	(2.)	s.	d.
13 to 14 -	3	6	14 to 15 -	4	0
14 to 15 -	4	6	15 to 16 -	5	0
15 to 16 -	5	6	16 to 17 -	6	0
16 to 17 -	6	6	17 to 18 -	7	0
17 to 18 -	7	6	18 to 19 -	8	0
18 to 19 -	8	6	19 to 20 -	10	0
19 to 20 -	10	6	20 to 21 -	12	0
20 to 21 -	12	6			

"The difference between these two columns arises from the difference of age at which a boy begins to work. It will be seen from them that the earlier he begins the more valuable is his labour; that if, for instance, he commences at 13, his labour, at 14 years old, is worth 6*d.* per week more than if he began at the latter age. If he begin at 12, he is far more valuable to his employer when he arrives at the age of 14, than the one who begins at 13, &c.

"In other words, the earlier that a boy is withdrawn from school and educational influences, the better it is for him in a pecuniary point of view.

"Rates of Wages for Apprentices.

From 14 to 15 years of age, 5*s.* per week.
„ 15 to 16 „ 6*s.* „
„ 16 to 17 „ 7*s.* „
„ 17 to 18 „ 8*s.* „
„ 18 to 19 „ 9*s.* „
„ 19 to 20 „ 10*s.* „
„ 20 to 21 „ 11*s.* „

"Nearly all these apprentices work piece-work after they are 17 years of age, and can earn from 12*s.* to 22*s.* per week."

The evidence from the potteries and glassworks is very striking. My correspondent, Rev. J. Levett, says,—

"To begin with the potteries:—the pay varies with the nature of the work and the quantity done. There is no restriction of age nor sex; both boys and girls are employed at the wheel, and those working under a good journeyman turner, will earn 10*s.* per week, those under an apprentice 5*s.* or 6*s.* per week. A good journeyman will earn 30*s.* per week; an apprentice, of 17 years of age, ought to earn 15*s.* They begin at the age of 12 to 14 years, with 5*s.* or 6*s.* per week, and increase gradually.

"In the printing department—

Girls of 14 will earn 5*s.* per week.
„ 15 „ 6*s.* „
„ 16 „ 7*s.* „
„ 17 „ 8*s.* „

"A transferrer (a female) will get 12*s.* or 13*s.* per week; and a girl of 11 or 12 years old employed under her will earn 2*s.* 6*d.* per week.

"A presser (a female) of 10 or 11 years of age, will earn 3*s.* or 4*s.* per week;

At 12 years of age, 3*s.* 6*d.* per week.
„ 13 „ 5*s.* or 6*s.* per week.

"Boys employed about the ovens are generally paid by the day—

At 15 years of age they can earn	7*s.* 6*d.*	per week.
„ 16	„	„	8*s.* 6*d.*	„
„ 17	„	„	9*s.* 6*d.*	„
„ 18	„	„	11*s.* 0*d.*	„
„ 19	„	„	12*s.* 0*d.*	„
„ 20	„	„	13*s.* 0*d.*	„
„ 21	„	„	14*s.* 0*d.*	„

and afterwards 3*s.* per day. This is hard work, and those employed in it are subject to great changes of temperature.

"A dipper's boy, up to 14 years of age, will earn 5*s.* per week, and then more. This is a most injurious employment, as the lead soon affects the constitution of children. I have now before me the case of a lad who was sent to this work when nine years old. After four years, he was nearly killed by it; he was sent to the Sheffield Infirmary, where he remained for nine weeks, and now, after an illness of fourteen months, he is unable to do work of any kind, but goes about with the help of a stick.

"In the glassworks the wages are higher. Apprentices are paid by the gross, and they are required to make so many gross for their wages, which are from 10*s.* to 12*s.* per week. In busy times they are allowed to make more than the regular quantity, for which excess they are paid extra. This payment is called *plus;* and when there is a great demand, a man or boy may make as much by his *plus* as by his wages. Thus, a boy of 12 or 13 years of age, who has regular wages of 9*s.* or 10*s.* at a busy season, will earn 18*s.* or 20*s.* per week. Their work is very hard, and they are exposed to great changes of temperature. Boys of 11 or 12 years of age, employed in the packing department, earn 4*s.* 6*d.* to 5*s.* 6*d.* per week, and so increase up to 1*l.*, and even 30*s.* at the age of 18 to 20. The temptations to which they are exposed are terrible.

"In the forge, boys of 14 will earn 5*s.* to 6*s.* per week, and at the age of 18, 2*s.* 6*d.* per day. From this you will see, that had our pupil-teacher been sent to the pottery, he would easily have earned 15*s.* per week when 18 years of age.

"We have had instances of boys 12 years old making 20*s.* per week in the glassworks. There is now a strike amongst the glass-men. I have taken considerable pains in obtaining these statistics, and believe that you may rely on them."

From another large village, which is now the seat of considerable and increasing glassworks, the clergyman writes as follows:—

"With regard to the wages which young people receive in the glasshouses, they are these:—Under 13 years of age, 6*s.* to 7*s.* per week; 14 to 18 years old, 8*s.* to 12*s.* per week; and, with *plus*, about 10*s.* more. Some of the glass-blowers can make 50*s.* to 60*s.* per week. Improvidence is their general character, and the public houses receive at least half of the wages. This is clearly proved by the quick manner in which the publicans have realised large sums of money.

"In the pottery, the girls earn from 7*s.* 6*d.* to 10*s.* per week; but few, I believe, have more, on an average, than 8*s.* These girls commence working at the early age of 7 or 8 years. They go to work at 6 o'clock in the morning, and do not leave off till 8 o'clock in the evening. They have no time for instruction, as in the evening the body is too weary for the mind to work. The same remark applies to the boys who work in the glasshouses.

They commence so early that schooling is out of the question. Latterly there has been a strike amongst the glasshouses, and some of them are, no doubt, suffering; but they have brought it entirely upon themselves. The people here will not pay money for their children's schooling; they care little how they are brought up."

The statement from Halifax is as follows:—

"I enclose you returns of the wages of young people (between the ages of 13 and 18) employed in Mr. —— works. Many of the weavers are young girls of 14 years and upwards, living at home with their parents; they seldom earn more than 10*s.* per week.

"Earnings per week at the weaving-shed: full-time hands vary from 5*s.* to 20*s.*, but will average from 7*s.* 6*d.* to 8*s.*"

Again:—

		s.	*d.*	
Mill hands	lowest	4	6	per week.
„	highest	5	9	„
Combing hands	lowest	5	6	„
„	highest	7	0	„
Warehouse	lowest	4	6	„
„	highest	9	0	„

I have, my Lords, gone into considerable details on this subject, as I am convinced that it is the most important to which an Inspector can direct his attention, and report to you. It is plain that in every branch of labour the payment of young persons is higher than that of school apprentices. It is also *immediate, i. e.*, made weekly or fortnightly, and it is unconditional. On these three points then, value, readiness, and facility, it completely domineers over the pecuniary circumstances of the pupil-teachers. No wonder, then, that short-sighted young people and blinded parents, blinded by the glitter of present high wages, should choose the one and reject the other, remembering the old proverb, that the bird in the hand is worth two in the bush, though that bush be the tree of knowledge. Nor must we forget that, if the state of the child-labour market affect injuriously the position of the pupil-teacher, who does receive some payment for his work, *à fortiori* it affects the position of the school-child, who, as long as he is at school, is paying only, and receiving nothing. If the managers of a school could afford and were willing to pay every child in it a payment corresponding to his age and to the position he would occupy in the labour-market, even then the child remaining at school would be at a disadvantage, as he would not acquire that readiness and dexterity requisite in almost every branch of labour, which can be gained only by very early employment in it. It is by no means a satisfactory conclusion to state my belief that it is impracticable, in the present circumstances of the country, to keep any considerable

number of children much longer at school than they now stay; whilst, on the other hand, it is hardly possible, even for teachers of the highest qualifications, to give larger or deeper instruction to the children under their care, as they come and go for two or three years, and finally leave school at an age when the rich man's child is going to it.

Tabulated Reports on schools inspected.

The Tabulated Reports contain, as I have stated, a circumstantial account of each school which has been inspected by myself and my colleagues during the official year. The present condition of these schools, as affecting the general state of education in my district, I report here, annexing such remarks as Mr. Howard and Mr. Grant have made respecting their portions of the work.

I have inspected in the year 233 schools, viz.,—

Boys.	Girls.	Infants.	Mixed.	Total.
59	59	40	75	233

Two of them were closed at the time of my visit. Ten of them were visited twice within the twelve months. In the schools inspected there were 22,977 children present on the day of examination. With regard to condition, they may be thus classified:—

Good.	Fair.	Moderate.	Bad.	Total.
75	94	42	20	231

I am very glad to report so many as good. By this expression I mean good in their respective situations, "good" for a town, or "good" for a village. Some of them, indeed, ought to be called excellent.

Sheffield, Carver Street.
„ Pittsmoor.
Harewood.
Ripon, Cathedral.
Halifax, Copley Factory (Upper Division).
Richmond, Corporation.
Gilling.
Walton.
York, Bishopgate, Girls.
York, Manor, Boys.
Doncaster, Christ's Church, Boys.
Neswick, Girls.
Escrick.
Hull, Christ's Church, Boys.
„ Salthouse Lane, Boys.
Roos, Boys, Girls, and Infants.
Wentworth, Barrow.
„ Infants.

are worthy of special mention in their different circumstances of town and village, manufacturing and agricultural districts. Some of the bad schools are very bad indeed, but as there is hope of amendment in some, it seems unnecessary to make special mention of them.

Mr. Howard states:—

"I find that I inspected in the year ending 31 Augst 1856, the following schools:—

Boys.	Girls.	Infants.	Mixed.	Total.
49	42	20	135	246

Nineteen of these may be called really good.

Almondbury, Boys.
Boroughbridge, Mixed.
Barnsley, Boys.
Beverley, St. Mary's, Boys.
Farsley, Mixed.
Halifax, King's Cross, Boys. (This school has since fallen off).
" Girls.
" Infants.
" St. James', Victoria Street, Girls.
Halifax, St. James', Victoria Street, Infants. (The best infants' school that I have seen in Yorkshire.)
Huddersfield, Longroyd Bridge, Boys.
" " Girls.
Langbaurgh, West (Stokesley), Boys.
Leeds, St. Saviour's, Boys.
Marsden, Mixed.
Sheffield, St. George's, Girls.
" Trinity, Boys.
Slaithwaite, Lower, Mixed.
West Tanfield, Mixed.

" There is another class, principally of country schools, also 19 in number, which I need not mention by name, nearly equal to these, but less decidedly 'good.' Then a larger division (of 27) just above 'fair;' same of which promise very well. A fourth division comprises (135) above half of those which I have inspected; they range, with differences difficult to describe, between 'fair' and 'bad.' Finally, there are 46 which I must call 'bad;' some of them in a state disgraceful both to the managers and teachers; a few with prospect of amendment, others holding out no hope at all.

" I wish to take especial notice of Batley and Scholes, as two schools under masters who have no certificates, who are working almost single-handed, and whose pupils would put to the blush those of many schools under certificated masters, assisted by a large staff of pupil-teachers. I do not think I can name a school where history is properly taught. Geography, in general, is a very meagre knowledge of England and the very outlines of Europe. Arithmetic is generally taught too mechanically. Those children who possess a knowledge of fractions can seldom apply them to the very simplest problems. In most schools there is a very small per-centage of the children who can write down from dictation numbers under 100,000. I have no doubt you have often observed the mistakes made by candidates for apprenticeship through want of practice in notation.

" After arithmetic, I think that the Church catechism seems to be worst taught. I seldom find, even in good schools, more than a very few children who know the meaning of the words which they repeat without mistake. Reading lessons are also very defective; the children are seldom examined thoroughly in the meanings of the words used by them. I think the best reading I have heard in any school in Yorkshire was at Scammonden, a little school in one of the wildest districts in the county."

Mr. Grant reports thus :—

" The results of my inspection are these :—

	Boys.	Girls.	Infants.	Mixed.	Total.
Schools visited - -	36	33	26	92	187

Two of these were closed at the time of my visit.

" Of 185 schools, I consider 10 good.

Beverley Minster, Boys.
Bridlington Town, Girls.
Croft, Boys.
Leeds, Little London, Boys.
" St. Andrew's, Infants.
Market Weighton, Mixed.
Queenshead, Mixed.
Sheffield, St. Mary's, Girls.
York, St. Cuthbert's Boys.
" Walmgate, Girls.

" I call 86 fair, 73 moderate, and 16 bad, but my 'fair' is rather wide in its limits in both directions. The 10 " good " appear to me decidedly beyond the rest. The 16 'bad' are really disgraceful.

" It has struck me, that though the unsatisfactory condition of schools may often be fairly attributed to the great demand for juvenile labour, yet in a great many cases it is owing to want of proper support in the way of

funds. Every penny, in many places, seems to be obtained with difficulty, and nothing is spent upon the school when it can be avoided. Then the school is ill-found and incomplete, and owing to the smallness of the salaries, the teachers are always changing, a thing in itself sufficient to account for a bad school. Indeed, the change of teachers may account for many schools never getting on at all. Managers, in general, have never got to understand that, if they want a good teacher, they must pay a good salary, and the consequence is, that in a large number of schools there is no proper instruction, good teachers will not stay, and children will not come.

"I think that this cause of the bad condition of schools is not sufficiently considered, partly because it is much easier for people to complain of parents taking away their children so young, than to put their shoulders to the wheel and make a really good school. Of course, I do not deny the existence of the other cause, but you see it very much modified where there is a thoroughly good teacher, and a squire or clergyman, or both, to back him, especially when the teacher has been long in the place, and has gained the confidence of the people. Many instances of this will occur to you at once.

"In the working of schools I should like to see more general attention paid to accuracy, or perhaps rather completeness, in the teaching. Most teachers are apt to be satisfied with imperfect results; lessons ill read and sums done wrong. They correct the mistake, perhaps, in reading, but do not impress the right way on the child, who will often make the same mistake if tried in the same piece again. This is particularly the case with pupil-teachers. I have been surprised at the small number of cases in which the sums I set, which are generally very easy, are done rightly."

Elementary drawing.

I have to report that considerable dissatisfaction exists in my district with regard to the exercises in drawing, both as to the number of prizes awarded to them and the character of the exercises to which they are given. I do not profess to be able to give an opinion on this subject, but think it right to mention the fact. The general result is this:—Thirty-one schools in Yorkshire have sent in seventy-two candidates for drawing prizes (sixty-seven males and five females); fifteen of these (thirteen males and two females) have obtained prizes, *i. e.*, more than twenty per cent. have been successful. This would be a small per-centage of success in any other subject of elementary education, but drawing has been practised for so short a time as a school study, and has, as yet, taken so little root in Yorkshire, that it would be premature to say that, as a branch of national education, it has not been sufficiently encouraged by prizes from the Department of Science and Art. In some of the large towns, Sheffield more than any other, very considerable progress has been made in this study. In others, Huddersfield, Halifax, and Bradford, little attention has been paid to it by the pupil-teachers and upper classes of the elementary schools, to whose case my remarks chiefly apply. I may add, in proof of the feeling which I have mentioned above, that, though there is no town where knowledge of drawing is more likely to be useful than in Sheffield, there is, at the same time, no place in which pupil-teachers and school children seem to have taken so little advantage of the School

of Art planted in it. I quote a statement made by Mr. Cole, the Inspector-General of the Department of Science and Art, at the inauguration of a new School of Art in Sheffield :—

"The Sheffield School of Art stood at the head of all the schools in the country; but its position, in relation to other places, was this :—Exeter, with a population of 40,000, had an average number of students, from the parochial and other schools, 835, besides 190 students in the School of Art. Cheltenham, with a population of 35,000, had 1,350 students from the different schools. In Chester there are 1,200, and in Worcester nearly 500; but in Manchester, with its population of 300,000, they had only 230 students from the parish schools; and in Sheffield, with 135,000 souls, there were eighteen of these students under the superintendence of the master of the School of Design."

Industrial schools.

Of industrial schools I have little to report. As I have before explained to your Lordships, they are not likely to increase rapidly in manufacturing or mining districts, where work is generally plentiful and well remunerated. I append a report (*Appendix* E.) made by the master on the school-garden at Elsecar, which, like many other educational works in that neighbourhood, owes its existence and vigour to the intelligent liberality of Lord Fitzwilliam.

Libraries and reading-rooms.

School libraries and reading-rooms are increasing, both in number and value. Some of them are doing great good. I append a report (*Appendix* F.) of one of the most successful,—the Harewood literary and scientific institution,—furnished to me by one of its officers (Mr. Jones).

Position of Yorkshire, in educational progress.

In conclusion, let me state how my district, the great county of York, stands in what may be called "the educational world." Yorkshire contains rather more than one-tenth of the whole area of England and Wales, and not quite one-tenth of the population. But its share of the various educational grants has been larger than this. It has received nearly one-eighth of the whole grant for certificated teachers, 19,557*l.* out of 159,221*l.*; it has received more than one-eighth of the whole grant for pupil-teachers, viz., 85,175*l.* out of 663,596*l.*; it has received more than one-eighth of the capitation grant, viz., 2,441*l.* out of 16,083*l.*; it has received about one-eighth of all the building grants, viz., 72,693*l.* out of 580,381*l.*; and it has received nearly one-eighth of the grant for books and maps, viz., 2,022*l.* out of 16,925*l.* The proportion of one-eighth of the whole public money seems to have fallen on Yorkshire and her children. For the last year the proportion seems to be on the increase. For certified teachers, 5,234*l.* out of 40,000*l.*; for assistant teachers, 790*l.* out of 4,500*l.*; for pupil-teachers, 16,162*l.* out of 120,000*l.*; *i.e.*, more than one-eighth, more than one-sixth, and more than one-eighth respectively. In the above statement I have included all the schools under inspection in Yorkshire. Those belonging to the Church of England

are about four-fifths of the whole number, and receive that proportion of the grants. So that, tested by the amount of money received from public grants, which always bears a relation to the amount raised locally, and to local exertions in the cause, Yorkshire is in advance of other parts of England. Of the importance of the money question no one is inclined to doubt; but in the subject of education it is becoming yearly more important, as will be shown by the following statement. Out of twenty-two school districts connected with the different religious bodies in Great Britain, *there are but two in which the expenditure is not greater than the income.* The return of the whole shows a deficiency of nearly 20,000*l.* in the year 1855–6; viz., income, 464,715*l.*; expenditure, 483,037*l.* For the year 1856–7, I have only the return for my own district which, as far as it goes, shows an increase of the habit of *running into debt.* In the first-named year the excess of expenditure over income was 6 per cent.; in the latter year it was about 7½ per cent. But the educational position of Yorkshire may be proved by another test. The population of Yorkshire, 1,789,047, is not one-tenth of the whole population (17,927,609) of England and Wales; but the number of children that its school buildings will accommodate (speaking only of schools under inspection, from which returns can be obtained) is 92,946, whereas the whole number for England and Wales is 794,848, so that Yorkshire approaches here also to her proportion of one-eighth. In the returns, also, of children in average attendance at school, the proportion, is between one-eighth and one-ninth of the whole number, 57,314 out of 506,009. I may add that there is but one school district in England (Staffordshire) which offers so large a per-centage of school accommodation to school population, and only two (Lancashire and the Metropolitan) which have so large a proportion of children in average attendance at the elementary schools. Another striking feature of Yorkshire education (which I have before brought under your Lordships' notice) is the large amount that is paid by parents for their children's schooling, amounting year after year to nearly half of the whole expense. This seems to me a fact very creditable to the working people of Yorkshire, and one in which they far surpass their fellows in other parts of England. Out of a total income of 39,340*l.*, the sum of 19,100*l.* was received this year by the school-pence of the children. This is rather below the average of late years. Last year the different school districts connected with the Church of England contributed in the following manner:—

	Per-centage of School-pence of whole income.		Per-centage of School-pence of whole income.
Metropolitan district -	27	South-Eastern district -	26
Western district, Gloucester, Hereford, &c. - -	29	Lancashire ,, -	48
Yorkshire - - -	49	North-western ,, -	39
South-western district -	23	Northern ,, -	39
Eastern ,, -	28	South Midland ,, -	28
Midland ,, -	34	Wales ,, -	30

Nor is it little to the credit of the higher classes in Yorkshire that their voluntary contributions to the education of their poorer neighbours amount to 33 per cent. of the whole cost. Indeed, as I have before been glad to remark, the nobility and gentry of Yorkshire have always been the intelligent and liberal promoters of elementary education. The schools at Wentworth, Harewood, Escrick, Newton-on-Ouse, Danby, Wykeham, Walton, Sledmere, and Sharow are but a few out of many proofs, both of the intelligence and liberality of the landed aristocracy, whilst the colossal establishments at Halifax, Haley Hill, Copley Factory, Holbeck, and Bradford, Low Moor, and many others on a smaller scale, but not less effective in their results, speak as plainly of the zeal and munificence of the great manufacturers of the county.* Of the clergy it is difficult, within the moderate compass of a report like this, to say anything; for whatever is said must fall far short of what ought to be said of their zeal, of their intelligence, and of their self-denying liberality in the education of their parishioners. I could, were I allowed, mention instance after instance, where considerable sacrifices have been made by them, and great self-denial practised, in order that the school might be supported. Still, notwithstanding all that has been done, and that is being done, the great obstacle to progress remains,—the school children are too young to be taught much, too soft to be permanently impressed. Neither the head nor the heart, at their tender age, is fit for the burden laid upon it, nor the duty required of it. No wonder, then, that the crop does not answer our expectations, and that, when we might, under fair circumstances, expect a return hundredfold, we are content if we get our seed again, and all does not perish under the choking tares.

I have the honor to be, &c.

To the Right Honorable
The Lords of the Committee of Council on Education.

FREDERICK WATKINS.

* I cannot observe the death of Lord Downe without mentioning his works, in the cause of education, which have come under my observation in Yorkshire :— At Sessay, a church and school erected by him ; at Wykeham, a church, parsonage, and school ; at Pollington, a church, parsonage, and school; at Cowick, a church, parsonage, and school ; at Shipton, a church, parsonage, and school ; at Baldersby, a church, parsonage, and school; at Hensall, a church, parsonage, and school ; at Danby, a school, parsonage, and the church rebuilt; and in some of these places Lord Downe also gave endowments to a considerable amount.

Appendix A.

Appendix C.

Whitkirk Vicarage Evening School.

"The work begun in November 1852, for the benefit of the young working people of Whitchurch parish, still continues to prosper.

"The *singing class* has become a choir for the church, and the young people have attained to a thorough knowledge of music, so as to be able to sing any

of Handel's choruses, reading the notes with perfect ease; they have practised with great diligence, and have derived the greatest pleasure from learning music scientifically from the beginning. The members of the choir consist principally of young persons, employed in skilled labour, belonging to the parish.

"The *collier class* numbers forty pupils, though seldom more than fifteen or sixteen come at a time. They attend from five till seven o'clock two evenings in the week during the greater part of the year. On account of the population being very much scattered, it is found better to discontinue this class during the depth of winter. They assemble again every year the first long days in spring.

"The *library*, now greatly increased, circulates over a very large district. We find that the books are very often read aloud of an evening in the cottages by the best reader in the family. It receives and requires perpetual additions, and is looked upon as a great resource by the parents as well as by the young people. The friendly feeling established in the parish by the constant intercourse with the working boys and young men, is of much use; but we have our troubles and disappointments at times, and are obliged to look forward in faith, in some instances, to the fulfillment of the promise, 'Cast thy bread upon the waters, and thou shalt find it after many days.' We can truly say, that our experience leads us to the conclusion that it is the ignorant youths of this parish who form into bad sets, and that those who take pleasure in learning and reading are for the most part the good and well-behaved. We can have no better judges of this than the parents, whose gratitude for the restraint put upon their boys through their intercourse with us is always most warmly expressed."

Appendix D.

Leeds Factory Girls' Sewing School.

I have much pleasure in complying with your request for an account of our evening sewing school, especially as it may afford a favourable opportunity of encouraging by our success the establishment of similar institutions elsewhere. It will, perhaps, be most convenient to begin with a brief detail of the routine of the school. We meet at seven o'clock on two evenings in the week (all the year round) in a comfortable, well-lighted room, provided with forms and tables. When a scholar applies for admission, her name, age, residence, and occupation are registered, and she receives a card with her name and a number written on it. She may either bring work of her own or order any useful article of clothing, which is cut out and prepared for her against the next night of meeting. To this is attached a ticket with her name and its price, and when delivered out the particulars are entered in an alphabetical book, in which the scholar is from time to time credited with such payments as she makes. When the article is fully paid for she is allowed to take it away, and she has a pass-ticket given her which she delivers to the doorkeeper at the end of the evening. The unfinished work is collected in bags, each article being tied up with the scholar's card outside, so that she may find her own work without difficulty on the next school night. Each table is presided over by one or two ladies as teachers; another takes the general superintendence; and we have also the great advantage of the assistance of two gentlemen, one of whom sits at a separate table to take and enter the sums paid by the girls, the other assists in keeping order. From time to time during the evening the girls sing hymns to simple tunes, which they much enjoy and excel in; and, generally, a half hour is employed in reading to them some interesting story. At nine

o'clock "time" is called, the work collected, and the school closed with a brief address and hymn.

Under this system our institution has now been carried on for four years, and its material results in providing the girls and their families with useful clothing may be judged of by the fact, that in the course of last year they made the following articles:—

292	Haiding slips (worn while working in the mills).
180	Holland and gingham slips.
253	Shifts.
289	Woolsey and other petticoats.
91	Sheets.
55	Shirts, and
390	Miscellaneous articles, such as handkerchiefs, aprons, and children's clothing.
In all, 1,550	

For which they paid (in instalments of a penny or more, as they thought proper) 73*l.* 16*s.* 2*d.*; the greater part of which sum would probably have been otherwise spent improvidently. The nightly attendance of scholars ranged between 90 and 130. No charge is made for teaching, nor for needles, thread, or tape. The articles are supplied to them at cost price, and we are most careful that they should be of good quality, and cut out as economically as possible. To this care, and to the exactness with which the payments of the girls are entered, we attribute the entire confidence they have in our dealings with them.

I have been thus explicit in the detail of our proceedings, in the hope of assisting others who may be desirous of following our example. I shall be glad to give any further information, and will only add a few words on the moral effects of our institution in promoting a healthy intercourse between different classes of society, whose wide separation I look upon as one of the greatest evils of our time. Our scholars are almost entirely mill girls, who have few opportunities of being brought into contact with ladies who know how to manifest a kindly interest in their welfare without trenching upon that independence of feeling which is so marked a feature in our operatives. But their appreciation of a few hours of such intercourse is soon evidenced by the improvement of their appearance and manners, and the thankfulness with which they receive the instruction of their teachers; who, on their part, are amply repaid for their time and trouble by results far more satisfactory than they ever anticipated.

Leeds, 18 February 1857.

Appendix E.

Elsecar School Garden.

Reverend Sir, Elsecar, Rotherham, 30 Nov. 1856.

At your visit to our school in August, you expressed a wish to have an account of the industrial garden. I now beg to forward the same, accompanied by a ground plan.

In the autumn of 1854, Earl Fitzwilliam granted a piece of land contiguous to the school, for the purpose of an "industrial garden," to be cultivated by boys attending the day-school. The piece selected contains about two-thirds of an acre, and is now surrounded by a stone wall, 6 feet high. On reference to the plan it will be seen that a portion at each end is allotted to the master and mistress respectively, while the whole of the middle, with the exception of a small border, is laid out in twenty-four allotments, twenty-one of which are cultivated by scholars, and the other three by the assistant master and pupil-teachers. The area of each portion is about sixty-eight square yards.

The site was formerly part of a wood. After the erection of the wall the trees were felled, and as the ground was very uneven and covered with excavations from the foundations of the buildings, it was thoroughly trenched, drained, and laid out with walks; the latter are five feet wide, and have a bottom of stone eighteen inches deep. The drains are four feet deep, and run into the main drain (*a* to *b*), which is some inches deeper, and has a fall into a main sewer. The inclination of the ground is very favourable for good drainage; the corner B being five or six feet, and A from two to three feet higher than the level of C.

The boys could not enter on their work until the middle of May 1855; however, by losing no time the ground was soon planted, and a crop obtained the same summer. During the winter, all ground not occupied by some such crop as winter greens, was well ridged, that it might be exposed to the influences of the frost and air.

The conditions upon which the plots are held are—

1. Preference is given to the oldest boys, provided they are deserving.
2. No rent is required.
3. Tools and manure are found by his Lordship.
4. Any boy being frequently absent without leave forfeits his garden and crop.
5. Boys who continue in attendance until the end of August and then leave for work, shall be allowed to hold their garden during the remainder of the year.
6. The gardens are to be worked out of school hours, except two hours on Wednesday afternoons.

The effect they have both on the boys and their parents is, generally speaking, very good. I cannot say they are the means of prolonging the stay of children at school, but certainly they create and foster habits of industry, neatness, and order, as well as serving as the basis of some little theoretical teaching in agricultural chemistry.

They are most valued, in a profitable point of view, by those whose parents are employed in the iron works, as such have little or no garden ground attached to their cottages; but as the colliers are all well off in this respect, they are not very anxious about their boys holding an allotment. The boys themselves, with rare exceptions, are very willing to become tenants. On the part of some there was a disposition to turn the allotments into a "potato piece;" but as the chief design of the promoters is, that they shall be cultivated after the model of a cottage garden, they have been allowed to plant one-third or one-half with potatoes, and the remainder with other crops, among which the salads (lettuce, radish, and celery) take well with the parents.

During the two hours on Wednesday afternoon for working in the garden, all the boys in the school are sent out, and all may find employment if they feel disposed and are properly superintended. In planting time, drafts of boys are allowed out oftener, but always in charge of one of the teachers.

Last year the gross profit on the twenty-four gardens amounted to 2*l.* 14*s.* 10½*d.*; this year it will be considerably more. Appended are the accounts of two of the best gardeners for the seasons 1855 and 1856.

Although the addition of an industrial garden throws a considerable amount of extra work and anxiety on the master, yet he is to a certain extent repaid in the physical exercise it causes him to take, conducing very much to the preservation of his health. It also yields him many good opportunities of observing the moral characters of his boys, and of turning the same to practical account.

I am, &c.
(Signed) Wm. Berridge.

Appendix F.

Harewood Literary and Scientific Institution.

The Harewood Literary and Scientific Institution was established in the month of March 1853. Its objects are very similar to those of the various mechanics' and literary institutions now so common in our large towns and other densely populated localities, and if the Harewood institute belonged to this class, there would be nothing peculiar to notice, either in its constitution or operation.

But when it is borne in mind that it is a successful self-supporting village institute, where the population is considerably under 1,000, and that such institutions are from some cause or other very rare, then it will be allowed that there is something in its constitution and management worthy of imitation and of public attention. It embraces the following departments—reading room, library, lectures, evening classes, and branch libraries.

The Reading Room.

This is held in a large commodious apartment in a partially-occupied house, most generously granted for the purpose by the Earl of Harewood, and most comfortably fitted up by the committee with tables, benches, &c. It is open every evening at 6 o'clock, with the exception of Saturday, when it is open at 3 P.M. On Sundays, of course, it is closed. It is lighted with gas from a private gasometer, and a cheerful fire burns every evening when necessary. A librarian is appointed, who also takes charge of the room, keeps it clean, and is in attendance every evening until 10 o'clock, when it is closed. This person receives from the committee 3*s.* per week for his services. The room is supplied with the following newspapers and periodicals:—

Times, Sun—*daily.*

Leeds Mercury—*tri-weekly.*

Leeds Intelligencer, Illustrated News, Punch, London Guardian, Gardener's Chronicle—*weekly.*

Blackwood's Magazine, Hogg's Instructor, Chambers' Journal, Art Journal, Veterinarian, Mechanics' Magazine, Family Herald, Leisure Hour—*monthly.*

The average attendance at the reading room, each evening, is about twelve, and although this may be regarded as a small number, yet the committee are satisfied that this department of the institute is accomplishing its work, when it is remembered that the attendance during the summer months will necessarily be small among a population purely agricultural.

The Library.

The library contains 700 volumes, consisting of works in every department of literature. About 300 vols. were granted in the outset by the Countess of Harewood from a parochial library which her Ladyship had established for the use of the villagers, but which was not appreciated as it ought to have been. The remaining 400 vols. have been added since by gift and purchase; and the number is steadily increasing. A book is kept in which members are allowed to enter the particulars of any book or books which they wish to be purchased, this is then examined by the committee, and, if approved of, they are obtained. This department of the institute is in a very flourishing condition, the books are eagerly sought after and extensively read; the circulation of books and periodicals, during the year 1854, amounting to an average of thirty-six to each member; while during the past year there was an increase on this number. While great care is taken to exclude polemical, political, or any books of a questionable tendency, the library is well supplied with light reading—the standard novels of Scott, Bulwer, James, and other authors of repute, forming a large and important part of it. This has contributed very materially to its success; and so long as the committee exercise

the same discrimination in catering for the intellectual enjoyment of the readers, so long will the institute continue to flourish. The non-success of a great many parochial libraries may be traced to the neglect of this. Many clergymen, with the best intentions, establish a village library, and crowd it with religious publications, in many instances obtained by grant from the Society for Promoting Christian Knowledge, and they are surprised to find, after the novelty of the thing has worn off, that the people refuse to avail themselves of its use. This is entirely owing to the want of interesting works. Labouring men are fond of amusing publications; as a body they are an ill-educated class, and something mentally palatable must be provided to entice them to the reading room. A taste for reading is created, the faculties are exercised, the public-house is thrown off, low and debasing amusements are discarded, opinions are formed and acted upon by the influence of those principles which are produced by the reading room. The rules for the preservation of the books, time for reading, &c., are stringent and strictly enforced.

Lectures.

The session commences in October and terminates generally in April. The attendance is unusually good, the large village school room being sometimes crowded. Members are admitted free, and allowed to bring a lady; non-members pay 6*d.* each. The whole of the lectures, which are delivered fortnightly, are gratuitous, the committee having never engaged a paid lecturer since the formation of the institute.

The last year's list will convey a fair idea of the character of the lectures:

1855, Nov. 1	Mr. Edward Clapham	Photography.
Nov. 15	Rev. Miles Atkinson, M.A.	The introduction of Christianity into Britain.
Nov. 29	Rev. Jas. Palmes, B.A.	Physical Geography.
Dec. 13	J. G. Smith, Esq.	Electricity and the Electric Telegraph.
Dec. 27	Rev. M. R. Brasher, M.A.	The Solar System and Meteoric Stones.
1856, Jan. 12	Rev. Henry Blunt, M.A.	A Spanish Olla.
Jan. 26	Rev. W. Sylvester, M.A.	Poetry and the Poets.
Feb. 9	W. H. Traice, Esq.	Shakespeare.
Feb. 23	Rev. R. Newlove, M.A.	Music.
Mar. 9	C. P. Pratt, Esq.	Incidents of the War.
Mar. 23	Rev. S. Fearon, M.A.	On Queen Mary.
Apr. 6	Mr. Jno. Jones	On Popular Superstitions.

Evening Classes.

These have been conducted three evenings a week during the winter months, by the Rev. Miles Atkinson the Vicar, and Mr. Jones the schoolmaster. The course of instruction embraces writing, dictation, English grammar, arithmetic, and mensuration. The classes have been tolerably well attended, and productive of much good. Members pay 3*d.* each weekly, and non-members 6*d.*

Branch Libraries.

A novel and important feature in the operations of the institute has been the establishment of a branch library at Weeton, a village in the parish of Harewood, three miles distant. The Rev. J. Palmes, the incumbent, is much interested in the attempt, and it is under his countenance and support, that it has turned out so successful. A box is filled with books and sent there for circulation every fortnight, thirty members there availing themselves of this privilege. They pay 2*s.* per quarter, and are entitled to all the other privileges of the institution, many of them attending the lectures upon fine moonlight evenings. This department is in a very prosperous condition, and it is in contemplation to extend the same benefits to the inhabitants of East Keswick, another village in the parish of Harewood, three miles distant.

As the institution has now been in existence for four years, it may fairly be considered as established. The novelty attending its inauguration has long since passed away, and at present it seems to possess not only the elements of success, but also of progress. The following table will verify this statement.

—	No. of Members.	Issues of Books.	Average Attendance in Reading Room.	Income.	Expenditure.	Volumes in Library.	Gross Balance on the Three Years' Account.
				£ s. d.	£ s. d.		£ s. d.
1853	88	1,610	8	76 11 6½	54 12 3	370	
1854	73	2,124	10	51 19 2½	44 13 2½	435	27 3 7½
1855	91	2,162	12	56 11 9½	58 13 5	523	
1856						709	

The large expenditure in 1855 was caused by a judicious purchase of books to the amount of 41. 10*s*.

It may be imagined that the institution is indebted for its success to the liberality and kindness of the Earl and Countess of Harewood, who have done so much for the religious and intellectual advancement of the inhabitants of this extensive parish. But while I am desirous of attaching every importance to the aid which the noble lord extends to the institution, I nevertheless feel certain that its present and future success is attributable to other causes. And, as I firmly believe that it is quite possible to establish and maintain a similar institution in every village in England of an equal population, it may be well to lay down a few simple rules which are considered to have been instrumental in advancing the prosperity of the Harewood institute.

1st. *It must be comprehensive in its character;* that is, it must embrace all the departments previously mentioned. The reading room, library, lectures, and evening classes, are all of them inseparable, though quite distinct in their character and objects. It would be an easy matter to descant upon the advantages of each of these, but this is unnecessary; they are all of them indispensable in the constitution of every village institute.

2nd. *The payments must embrace all classes.*—This is important, that the labourer may enjoy equal advantages with the rich man, by the payment of a sum commensurate with his station and income. The following extract from the Harewood Rules will show how judiciously they have been framed:—

"Proprietary members make an entrance deposit of 1*l*., and subscribe annually 15*s*. That there be five classes of subscribers:—

"First class, who shall pay 6*s*. half-yearly.

"Second class, to be called the mechanics' and artizans' class, 4*s*. half-yearly.

"Third class, labourers, 3*s*. half-yearly.

"Fourth class, ladies, 2*s*. half-yearly.

"Fifth class, under twenty-one years of age, 2*s*. half-yearly."

These payments are within the reach of each class, and *all* the advantages of the institution are available to each class alike.

The following summary shows the number in each class at present:—

Proprietary members	- - - -	13
Subscribers—1st class	- - - -	12
,, 2nd class	- - - -	21
,, 3rd class	- - - -	6
,, 4th class	- - - -	20
,, 5th class	- - - -	19
Total	- - -	91

3rd. *The Managing Committee must include working men.*—A great secret of success is embodied in this rule. The artizan and labourer are sure to take an interest in any society managed by persons of their own class. There is less of that suspicion existing which is so often to be found among them, when the management is monopolised by one or two of the upper ranks of society. The labouring classes have a deal of sympathy one with another; and they also exercise more control over each other than what is generally

imagined, it is, therefore, wise policy to invest them with a share in the management of any institution specially designed for their improvement.

Add to these, a constant supply of new books and periodicals, with a regular succession of interesting lectures, and success will be sure to follow. It may be, however, that there are some districts where even with these appliances there would be a lack of funds. But I sincerely hope that the day is not far distant when the Committee of Privy Council will find it to be desirable to extend substantial pecuniary aid towards the sustentation and further development of these institutions. They form an important part of the educational machinery of the country, quite as much as our National schools do, and are rendering incalculable service to the community, not only in instructing and aiding our adult population, but in taking special charge of our future men at the most critical stage of their life, viz., from boyhood to manhood.

GENERAL REPORT, *for the Year* 1856, *by Her Majesty's Inspector of Schools, the* Rev. E. DOUGLAS TINLING, M.A., *on the* CHURCH OF ENGLAND SCHOOLS *inspected in the Counties of* DORSET, SOMERSET, DEVON, *and* CORNWALL.

MY LORDS, Bath, January 1857.

UPON the completion of another year, I beg leave to lay before your Lordships a report of the work which has been done in the south-western district by myself and Her Majesty's Assistant Inspector, the Rev. Edward Arnold.

Employment of time.

The following table shows the manner in which our time has been occupied, and the various duties which have devolved upon us during the past year, in addition to the actual inspection of elementary schools, which, comparatively speaking, forms but a small portion of the work of an Inspector.

Employment of time.

Number of Days

	Inspecting Schools.		Examining Candidates.			Revising Papers.		Journeys.	General Report.	Correspondence and Conference.	Vacation and private business.	Illness.	Sundays.	Total.
	Elementary.	Normal.	Pupil-teachers.	Certificate.	Registration.	Pupil-teachers.	Teachers.							
Rev. E. D. Tinling	121	9	13	10	3	10	12	5	28	52	31	20	52	366
Rev. E. Arnold -	169	–	9	9	–	5	17	13	–	50	42	–	52	366

In the following report I shall notice briefly these details in the order in which they appear in the above table, and shall then endeavour to show your Lordships that, *as far as this district is concerned*, the present Minutes are doing real good, and that, whatever may be the case elsewhere, they are not only fully appreciated by a great body of school-managers in the counties of Dorset, Somerset, Devon, and Cornwall, but that, if the principles were overthrown upon which they are founded, the education of this district would be greatly impeded.

Inspection of elementary schools.

During the past year, 121 days have been employed by me in the inspection of elementary schools, and 169 days have been so employed by Mr. Arnold.

*Inspection of Elementary Schools.**

	Number of Institutions visited.	Number of School-rooms under separate Teachers.	Boys' Schools.	Girls' Schools.	Infants' Schools.	Mixed Schools.	Number of Children in attendance in Schools.	Number of Pupil-teachers in these Schools.	Number of Certificated Teachers.	Number of Registered Teachers.
Rev. E. D. Tinling	143	189	52	41	24	72	17,619	289	106	12

Inspection of normal colleges.

For nine days I was engaged in the examination of the Salisbury Training College for schoolmistresses, with the Rev. F. C. Cook, and of the Exeter College for masters, with the Rev. F. Temple. These institutions had each of them their complement of students. The report upon them devolves upon my colleagues.

Progress of schools inspected.

Amongst the elementary schools visited, since the date of my last report, I find a decided increase in the number of those in which a good work is progressing for the children of the poor; in which the teaching is sound, extenive, and likely to be useful; and in which the masters and mistresses are taking real pains with the education of the children placed under their care. I

* I am desirous of correcting an error which I am informed that I made in my Tabulated Reports respecting the Blue Coat School in Wells, Somerset, at my visit of inspection of 12 March 1855 :—

"This school might be made really efficient with little difficulty, if the trustees co-operated cheerfully and heartily with the bishop of the diocese, who is most anxious for the education of the poor throughout the diocese."

"There is an endowment of nearly 500*l.* per annum expended upon these two schools."

The Dean of Wells has since assured me that the matter has been "for some time under consideration," and that "the trustees do co-operate cheerfully and heartily with the bishop of the diocese, and are, without a single exception, deeply anxious for the extension and efficiency of this school." I rejoice to make the correction on such good authority, and to find that the reasons for the inefficiency of the schools are other than I had supposed. I may be allowed to add, that I still feel confident that, with the harmonious working of the body of trustees, these most important schools will soon be made efficient.

† In Dorset there are 41 pupil-teachers and 18 certificated teachers, in 20 schools which were not visited within the official year.

find also a very large and increasing number of fair schools, where there is an earnest desire for improvement; and at the same time I meet on all sides with a much more general wish on the part of school managers to make their schools of real service, to remove inefficient teachers, and to obtain the benefits offered through the Committee of Council. Many schools have taken a good position as model schools for discipline and order, for mechanical arrangements, and also for the standard of attainment reached by the children; and these are scattered here and there throughout the whole extent of the district, not confined to towns, or the dense populations—not confined to those parishes where personal wealth has been largely expended upon them; but a growing number, as well in the thickly peopled cities and mining localities, as amidst the broad acres of the purely agricultural districts.

Early age at which children leave school.

The greatest difficulty which we have to combat in the elementary schools is the early age at which the children are removed from school,—an evil which certainly does not diminish; neither do I expect that it will do so, unless some half-time measure should be adopted. A half-time measure, however, would be beset with many practical objections.

Attendance of children in Bath City Schools.

The following table gives the age of the children in seven groups of schools in the city of Bath visited in 1856.

Name of School.	Number of Children according to Age.								Total.

And this affords no uncommon picture of the early age at which the school education of the poor is completed. But, whilst every one is ready to admit that the early age at which the children leave school forms the greatest barrier to the education of the working classes, there is no ground, *as far as this district is concerned*, for the statements which have been made respecting the decrease of attendance in school. And here I would call your Lordships' attention to an error on this subject, relating to the schools in the city of Bath, as put forth in *The Times* of November 20, 1856, purporting to be a portion of an address made by Sir John Pakington to the Members of the Manchester Athenæum, on the subject of National Education. "In Bath," says Sir John Pakington, "where more assistance was derived from Government than in any other portion of that part of England, last year's attendance at the schools had fallen off no less than 400 children, showing clearly that something was wrong, that we wanted a better system, or a better something else." I confess that I read this statement with astonishment. I append a table of the numbers actually seen by me, year by year, in the schools under inspection in the city of Bath, since the date of my appointment in 1847.

TABLE showing the Number of Children present on the day of Inspection in each of the Bath City Church of England Schools open to the visit of Her Majesty's Inspector, from the year 1847 to the year 1856 inclusive; together with the Year in which the Schools were placed under Inspection, and the average number of Children in attendance on the day of Inspection during the period in which the Schools have been visited.

Rush Hill	Mixed	—	—	—	—	—	—	—	—	52	—	Not inspected in 1856. Only once inspected.

From the foregoing table it is evident that the number of children in attendance on the schools which were under inspection in 1856 was, not only far above the average of past years, but, actually greater on the whole than in any other previous year. The following table recapitulates the number of children present on the day of inspection, during the last three years, in each of the Bath city schools, except the Rush Hill school, which has been only once inspected :—

	Class.	1854.	1855.	1856.
Walcot Parochial	B.G.I.	451	489	484

Sutliffe Industrial	B.	25	31	28
Total		2,111	2,215	2,249

And it must be remembered that Bath is not a place where the population of the working classes increases as in manufacturing towns or in the mining districts. In 1841 the population of Bath is stated to have been 53,206, and in 1851 54,254. I am anxious to show that the statement made by Sir John Pakington can have no proof in the Church of England schools under my inspection ; for those schools will be found to bear positive evidence of the benefit derived from Government assistance.* Not only have the numbers in attendance increased year by year, but also the whole standard of instruction has been raised ; the knowledge of the Word of God is deeper, fuller, and more careful ; the Book of Common Prayer is more understood, and the secular instruction is better and more universally taught.

Mis-statements regarding pupil-teacher's abandonment of their profession.

And here I would allude to another statement, which in my last report I was enabled to negative *as far as my district is concerned ;* and I have reason to believe that, were there any reliable statistics to be had, similar evidence would be given from other districts also. I refer to the statements respecting pupil-teachers leaving the profession of school-teachers as soon as the time of their apprenticeship expires. In the South-western district, at Christmas 1855, out of 228 pupil-teachers who had completed their apprenticeship, I was able to prove, by giving the name of every such pupil-teacher, that—

* Since this Report has been in print, Sir John Pakington has written to me, stating that his informant "had been led into a statistical mis-statement" respecting the diminution of numbers in the Bath schools ; and Sir J. Pakington has promised to correct the error, should a favorable opportunity occur, in the House of Commons.

137 entered a training school as Queen's scholars.
26 entered a training school without obtaining Queen's scholarships.
41 undertook the office of school-teacher at once.
24 only left the profession.

228

and thus, in my district, rather more than 9 out of every 10 of these trained apprentices either entered the training institutions or at once undertook the office of school-teacher.

Pupil-teachers.

The pupil-teachers, as a body, are doing well. The general character which they bear, the conduct which they exhibit, and their aptitude for the work in which they are engaged, are for the most part recorded by me as very satisfactory. And when I consider their age, their number (nearly 500 in this district), the homes out of which many of them are taken, the work which they have to do, and the certainty there is of their faults being known, I feel that the public money expended on their teaching and training has, not only been the means of raising these young persons intellectually, but has also, under God's blessing, greatly contributed to elevate their moral and religious character. I have found very little difficulty in obtaining candidates for apprenticeship; in fact, I have generally had on my list the names of several young persons who were anxious to become pupil-teachers, and for whom I have frequently been unable to procure any situation within my district.

Collective examination of pupil-teachers.

The pupil-teachers and candidates being examined collectively, at certain central places in the different parts of my district, is a means by which, as Inspector of the district, I am enabled to hold intercourse with those school-managers, teachers, and apprentices whose schools are visited by Her Majesty's Assistant Inspector, and of whom I should otherwise have no personal knowledge whatever. During the thirteen days thus occupied I examined no less than 487 pupil-teachers and candidates for apprenticeship. The following table shows the places in which the examinations were held on those thirteen days, and the number of young persons who attended.

Dorset.*	No. present.	Somerset.	No. present.	Devon.	No. present.	Cornwall.	No. present.
Wareham, for 1855.	19	Bath - -	83	Exeter - -	50	Truro - -	68
Wareham, for 1856.	33	Bedminster -	34	Torquay - -	29	Penzance -	14
		Bridgwater -	11	Plymouth -	58		
		Taunton - -	28	Barnstaple -	32		
		Yeovil - -	19				

* Several of the examinations in Dorset did not take place within the twelve months.

I also examined pupil-teachers and candidates at Wimborne, Beaminster, and other places, without taking any special day for the examinations; and Mr. Arnold has very frequently examined pupil teachers and candidates in the outlying districts of Devon and Cornwall, and has also held collective examinations at Shaftesbury, Tavistock, and other places. I may here be permitted to express my thanks to the Lord Bishop of Bath and Wells, for coming over from Wells on purpose to be present at my last collective examination in Bath, where I had eighty-four young persons under examination. His Lordship addressed a few words of encouragement to the teachers and apprentices, giving them an insight into some of the benefits of the pupil-teacher system, and telling them of the advantages now held out to them as school teachers. His Lordship's kindness in being present on the occasion, and the hearty manner in which he showed his sympathy in the cause of education, were thoroughly appreciated by the whole body of these young persons.

Examination for certificates and Queen's scholarships.

The paper examinations for certificate of merit and for Queen's scholarships occupied ten days of my time during the past year. I have every reason to believe that the papers were worked fairly and honestly, and that the different candidates were grateful for the privileges conferred upon them.

Examination for registration.

The age of thirty-five years being the limit beyond which no candidate can be admitted for registration, the number attending this examination was small. The examination lasted three days. I shall have occasion to refer to these examinations again, as I believe they might be made most serviceable for school teachers in our country villages.

Correspondence, &c.

The fifty-two days given to official correspondence, conference, and special work, are very far from days of leisure; the details of a district add so greatly to the correspondence, and that correspondence to the real interest of the district, that it has become one of the very laborious portions of an Inspector's work, and one which it is almost impossible to lighten, for the actual correspondence brings an Inspector into contact with much that is doing in the district, and enables him to be of service generally in forwarding the cause of education.

Illness.

I regret that for twenty days I was kept from every kind of work by illness.

Vacation.

As I had been unable to attend to any of my official duties for twenty days, and had much work on hand, I took only thirty-one days for vacation instead of thirty-six.

Revision of examination papers.

No less than twenty-two days were passed in revising examination papers. I am glad to be able to report that, on the whole, there was an ease and simplicity in the replies made by the different candidates. What we really require in school-

teachers is that they should be simple in their language, simple in their teaching in school, and simple in their lives out of school.

Continued operation of Minutes of August and December 1846.

And now I am anxious to call your Lordships' attention to the steady progress which, under the Minutes of August and December 1846, the cause of education has made in this district, because at the present moment it is popular in some quarters to look upon those Minutes as having failed in their object. The improvement of our poor schools by the employment of apprenticed pupil-teachers instead of monitors, the training of a special body of men and women as teachers, the testing their powers by examination, have not been in operation quite ten years, during which period it has been necessary to create amongst school-managers, both clergy and laity, a feeling favourable to the supervision of their schools by Inspectors appointed by the Government; it has been necessary to raise the general standard of efficiency sought for in the schools, to provide institutions in which the future teachers were to be trained, to make the school buildings fit places for the education of the children of the poor, and to increase the number of buildings throughout the length and breadth of the land; and I feel very strongly, considering the amount of difficulty to be overcome in order to effect these objects, that quite as much has been accomplished, and with as great success, as could fairly have been expected. In 1847, when the south-western district was assigned to me, there were not more than fifty-five schools under distinct teachers which appeared to me, at the time, to be in a position to benefit by the Minutes of 1846. The gradual increase from that date is given in the following table.

NUMBER of SCHOOLS under DISTINCT TEACHERS in which PUPIL-TEACHERS have been sanctioned.

Counties.	1849.	1850.	1851.	1852.	1853.	1854.	1855.	1856.
Dorset - - -	16	19	20	22	27	33	40	45
Somerset - -	36	44	55	50	49	59	65	81
Devon - - -	27	36	44	49	57	66	77	79
Cornwall - -	23	32	38	29	33	30	38	39
Total - -	102	131	157	150	166	188	220	244

NUMBER of CERTIFICATED TEACHERS.

Counties.	1849.	1850.	1851.	1852.	1853.	1854.	1855.	1856.
Dorset - - -	10	12	8	12	12	19	34	41
Somerset - -	9	12	12	20	27	34	51	67
Devon - - -	6	9	17	23	29	35	43	58
Cornwall - -	7	9	10	10	18	21	31	38
Total - -	32	42	47	65	86	109	159	204

The number of apprenticed pupil-teachers is also advancing in proportion.

Counties.	1854.	1855.	1856.
Dorset	62	76	98
Somerset	115	136	157
Devon	131	140	146
Cornwall	66	76	78
Total	374	428	479

The number of schools under my inspection was :—

In 1847.		In 1857.	
Dorset	33	Dorset	94
Somerset	75	Somerset	158
Devon	67	Devon	144
Cornwall	49	Cornwall	84
	224		480

It must be borne in mind that the increase in the number of schools has not been owing, in the slightest degree, to the Government *seeking* for additional schools; in fact, certain rules, *e. g.*, those relating to the sufficiency of school title, to the permanency of tenure, the material with which school-rooms are floored, the mode by which a fixed proportion of the teachers' salaries is raised, &c., have no tendency to proselytise. It has been the actual realization of the soundness of the measures adopted by the Committee of Council, together with the confidence which is now reposed in those measures, which have induced school-managers, of every shade of opinion, to seek for certificated teachers, for apprenticed pupil-teachers, for aid in building and fitting up school premises, and for simple inspection.

Cause assigned for steadiness of progress.

It is very true that the number of schools in which apprentices are sanctioned, and in which certificated or registered teachers are appointed, is still very small when compared with the requirements of the country; but this is not owing to want of confidence in the system on the part of school-managers, nor is it owing to the feebleness of the system itself; rather is it the result of several combined causes, which induced the Committee of Council to act with caution, lest the number of apprenticed pupil-teachers should hereafter become too great for the work allotted to them, and the country not be ready to offer a demand for such a supply of teachers as the unfettered operation of the Minutes of 1846 was calculated to afford. The fear that the supply of school-teachers would exceed the demand has for some time diminished; yet the restricting causes remain, to which I would allude, as they are without doubt the real causes why the number of pupil-teachers, and the number of schools in which they are sanctioned, have not

increased as rapidly as they did at first. The Minutes of 21 December 1846 sanctioned the apprenticeship of one pupil-teacher for every twenty-five scholars. A later Minute required forty scholars for each pupil-teacher, and that there should be fifty children in average attendance in the school previous to the appointment of any apprentices at all. Again, by the Minutes of 1846, an apprentice was sanctioned, provided that the master or mistress could pass an examination on the subjects which they were required to teach their apprentices in the following year. After January 1855, it was made compulsory that, in every school in which a pupil-teacher should hereafter be sanctioned, the master or mistress should be either certificated or registered; whilst at the same time no teacher was to be allowed to attend the examination for registration under the age of thirty-five years.

Present requirements for this district.

The result of the foregoing requirements, at the present moment, is that the great demand is for an increased supply of teachers, under whom pupil-teachers can be apprenticed and the capitation grant sanctioned. Now *in my district*, as far as my judgment goes, this want is, not only a want of additional certificated teachers, but also, a want of teachers of "sound, if humble, attainments," who may be able to undertake the teaching of our small village schools, of our hamlet schools, of the second and third schools in our populous and widely spreading parishes, where the school funds must ever be limited, and where certificated teachers are not so absolutely required.

The following table gives the number of parishes in my district, together with their population.

Counties.	Number of Parishes in Counties of Dorset, Somerset, Devon, and Cornwall, with a Population					
	Under 150.	Between 150 and 300.	Between 300 and 600.	Between 600 and 1000.	Over 1000.	Total.
Dorset - -	56	52	71	32	29	240
Somerset -	61	87	134	63	118	463
Devon - -	31	83	131	69	145	459
Cornwall -	6	26	39	44	96	211
	154	248	375	208	388	1,373

From the above table it may be seen that in this district there are more than 400 parishes with a population under 300, and at the same time that there are rather less than 400 parishes with more than 1,000 population. Now, whatever may be the requirements of other localities, if ever the education of this district is to become universal, there must be found some class of teachers who will be ready to receive, and be

fairly remunerated by, a less salary than a certificated teacher deserves, and will, I trust, always be able to obtain. The present requirements of a registered teacher I believe to be fully sufficient, as a general rule, for conducting a small village school,—such a school as may fairly be desired and calculated on by those who care for their poor, and who seek to promote education in the 400 parishes with a population under 300, and indeed in many other of the 777 parishes with a population under 600. Should it meet your Lordships' approval to withdraw the restriction on the age of registered teachers, you would, I believe, afford a means by which many of the smaller schools might at once be enabled to obtain a registered teacher, by which many deserving candidates in our small country parishes might be trained as pupil-teachers, and by which the Minutes of 2 April 1853, and 29 April 1854, might really do the work for which they were intended. In this district the most pressing claim is for the smaller schools, to raise them to the requirements of the Minutes, to enable them to lay hold of the annual grants, and so to become efficient.

Suggestion for supplying present want.

It is simply impossible that the supply of certificated or registered teachers over thirty-five years of age should be sufficient for many years to come to meet the demand of our country parishes; and I am therefore prepared to request your Lordships to reconsider the present restriction on the registration of teachers, viz., that they must have completed their thirty-fifth year, and to allow registration in future (for parishes with a population under 600) to any such teachers as shall have had the charge of any elementary school for a period of at least five years, or to any pupil-teachers who shall have successfully completed the term of their apprenticeship, and in addition shall have had the charge of a school under inspection for at least two years. Many teachers of "sound, if humble, attainments," might thus pass into our smaller parishes, into parishes with a population less than 600, the capitation grants might be continued to these parishes, and it would not entail any augmentation from the Parliamentary grant until these teachers should eventually be certificated.

A second suggestion.

I have also one other suggestion to make to your Lordships respecting the very poor parishes of my district; viz., as to the advisability of granting to such poor parishes a small annual sum of money for a period of three years, not exceeding 15*l.* per annum, upon a special report of Her Majesty's Inspector, and subject to the following conditions:—1. That the school managers provide themselves with a certificated or registered teacher within twelve months from the date of inspection. 2. That additional local contributions be raised, equal in amount to the special grant. And 3. That the grant be forfeited unless the above provisions be complied with.

The capitation grants under the Minute of 2 April 1853, have been greatly increased in this district during the past year :—

	1855.	1856.
Dorset -	21 schools.	42 schools.
Somerset	26 „	51 „
Devon -	23 „	29 „
Cornwall	20 „	40 „
	90	162

The reason of the numbers in Devonshire not having increased in proportion with those of the other counties is owing to the date of the grant to towns. The capitation grants were not extended to towns until after the principal portions of the Devonshire schools had been visited for the year 1856. I subjoin a list of the schools in my district to which capitation grants have been made since the date of my last report; together with the number of children who had been present the required number of days in these particular schools.

Night schools increase in number throughout the district, but very few of them are under the care of certificated or assistant teachers. I have been called upon to inspect only one such school officially during the past year. I am strongly of opinion that they are most useful institutions, and may be made the means by which a certain class of persons may receive some amount of education who could in no way have benefited personally by the day schools. Night schools.

The reformatory schools of Bath, and Bramford Wood, Exeter, continue to work successfully. There is nothing at the present time which demands of me a special report upon either of them. An account of each will be found in the Tabulated Reports for my district. It is a source of personal regret to me that it will in future years devolve upon others to visit this class of schools; for there is a great and growing interest attaching to them. Reformatory schools.

A scheme has lately been set on foot for the distribution of "prizes for practical schools in the West of England," by which it is intended to encourage, assist, and eventually improve the education of the middle classes. The education of the children of the poor is bound to that of the middle Middle schools.

classes by a link so close that I know of no benefit which could be conferred upon our poor schools greater than that of giving a real good education to the class above them. One of the chief promoters of the scheme to which I allude is Thomas Dyke Acland, Esq., whose zeal and energy will go far to secure its success.

In closing this report on the schools under inspection in my district, I have to beg to be allowed, as in former years, to record my thanks to the clergy and laity from whom I have received so much sympathy and kindness, and by whose friendly aid I have been enabled to obtain a fuller insight, not only into the general working of the schools, but also, into the life and character of the teachers.

I have the honor to be, &c.

E. Douglas Tinling.

To the Right Honorable
The Lords of the Committee of Council on Education.

* The number of Schools inspected during the year was 316; but from 51 of these no sufficient returns of income and expenditure have been received.

† Exclusive of Government grants.

GENERAL REPORT, *for the Year* 1856, *by Her Majesty's Inspector of Schools, the* Rev. M. MITCHELL, M.A., *on the* CHURCH OF ENGLAND SCHOOLS *inspected in the Counties of* NORFOLK, SUFFOLK, *and* ESSEX ; *together with some in the County of* HANTS.

MY LORDS, January 1857.

I HAVE the honor to present your Lordships a report on the schools inspected in my district between the 1st of September 1855 and the 31st of August 1856. The number of places visited by me was 128, in which I inspected :— Review of work of inspection.

Boys' schools	52
Girls' schools	46
Mixed schools	73
Infants' schools	34
Total	205

The total number of children in these schools when inspected was :—

Boys	7,724
Girls	6,074
Infants	3,026
Total	16,824

The number of miles travelled amounted to 4,507.

The number of places visited by the Rev. W. Campbell, the Assistant Inspector of the district, was 122, and the number of schools inspected as follows :—

Boys	27
Girls	27
Mixed	91
Infants	12
Total	157

The total number of children in the schools inspected by Mr. Campbell was :—

Boys	1,796
Girls	1,581
Mixed	5,061
Infants	820
Total	9,258

which, added to the number inspected by myself, makes a grand total of 26,082 children.

The number of miles travelled by Mr. Campbell was 4,372.

General examinations of pupil-teachers and candidates for apprenticeship were held, by myself, at Halesworth (twice), Yarmouth, Norwich, Lynn, Saffron Walden, Colchester, Chelms-

ford, West Ham, and Ipswich; and, by Mr. Campbell, at Fakenham, Bury, Aldborough, and Sudbury.

The numbers of pupil-teachers and candidates examined each place was as follows:

—	Boys.	Girls.	Total.
Halesworth	6	11	17
Yarmouth	21	19	40
Norwich	22	22	44
Lynn	23	13	36
Saffron Walden	6	14	20
Colchester	21	9	30
Chelmsford	12	15	27
West Ham	22	21	43
Ipswich	39	34	73
Halesworth	8	10	18
Fakenham	9	6	15
Bury	5	3	8
Aldborough	3	—	3
Sudbury	3	5	8
Total	200	182	382

New buildings.

New school-buildings have been opened for St. John's, Lowestoft; for an infant school at Lowestoft; for Halvergate; Finchingfield; Radwinter; Oakley; St. Osyth; Forest Gate; Southend; and Hadleigh, Essex.

Improved buildings.

The school-buildings of Ipswich, St. Peter's; Saffron Walden; Chelmsford; St. Peter's, Yarmouth; St. Mark's, Lakenham; Kelvedon; Witham; Halstead, Trinity; Walthamstow; Waltham Abbey; Stamford Rivers; Hudson's Town; Ipswich, Trinity; and Rendlesham, have been very much improved.

New fittings.

New fittings have been put into the schools at Colchester (blue), Hockwold, Wanstead Asylum, Stratford (Ch. Ch.), Birdbrook, Barnham, West Row, Hessett, Thundersley, Great Welnetham, Wethersfield, and Little Yeldham. (*Vide Appendix* B.)

Froebel system.

The Froebel system for infant schools has been partially introduced at Wivenhoe, Lakenham, Halesworth, Ipswich, St. Peter's, and Norwich, St. Stephen's.

Skylights and ventilation;

Skylights and improved methods of lighting and ventilation have been introduced into the schools at Chelmsford (girls), Witham (boys and girls), Colchester (boys), Ipswich St. Peter's, Ipswich Holy Trinity, Halstead Holy Trinity, Bungay (boys), Saffron Walden (boys), Hockerill model school, Yarmouth St. Peter's. Everywhere the alterations thus made are described as being most advantageous. The

testimony as to advantage of.

schoolmistress at Chelmsford told me that she felt as though a weight had been removed from her head; she said also that the school is now conducted with much less fatigue than formerly. One of the pupil-teachers of this school attributes

considerable injury and nervous affection
constantly stood to teach before the latt
panes. The mistress of the girls' school
Ipswich,—a very badly lighted and badly venti
having removed elsewhere, suffers no longer from
or that drowsy depressed feeling to which she u
subject.* The pupil-teachers of both these schools have
been more or less invalids. At Witham the clergyma
teachers express surprise at the effect produced by the ch
the schools being now conducted with so much more ease &
satisfaction. Opinions favourable to my view on this most
important subject are everywhere obtaining. Mr. Redgrave,
the Royal Academician, entirely agrees with me, and states
that badly lighted and badly ventilated rooms are, not only
unhealthy, but, most unfitted for the teaching of drawing.

Effect of yellow wash.

The Principal of the Battersea Training College mentioned to me that a certain class-room of the establishment always produces uncomfortable sensations, and induces a fatigue not experienced, under the same circumstances, in other rooms. The room is not lighted by lattice diamond panes, but by small squares. The Christmas examination (1856) was held in this room, and after the day's work peculiar pains affected the top of my head. I accounted for this, by observing that the room was coloured a bright yellow—not a golden or a yellow ochre—but a light straw colour. My reason for attributing injurious effects to this colour is derived from the following observations, extracted from "Chambers' Journal:"—

"It is not generally known what effect colour has upon health. The Rev. M. Mitchell, in his report to the Committee of Council on Education, states as his opinion that the ill-health of the pupil-teachers and mistresses of certain schools is caused by bad ventilation, and small diamond-shaped windows. I perfectly agree with Mr. Mitchell's observations as far as they go, but I believe there is another cause which assists powerfully in producing ill-health in schools, and induces melancholy, which I believe has escaped Mr. Mitchell's observation, as well as every other writer's on the subject. From several observations in rooms of various sizes, used as manufacturing rooms, and occupied by females for twelve hours each day, I found that the workers who occupied those rooms which had large windows with large panes of glass in four sides of the room, so that the rays of the sun penetrated through the room during the whole day, were much more healthy than those who occupied rooms lighted from one side only, or rooms lighted through very small panes of glass. I observed another singular fact, namely, that the workers who occupied one room were very cheerful and healthy, while the workers who occupied another similar room, and who were employed on the same kind of work, were all inclined to melancholy, and complained of pains in the forehead and eyes, and were often ill and unable to work. Upon examining the two rooms I found they were both equally well ventilated and lighted; I could not discover anything

* The master of the St. Margaret schools at Lynn is about to resign his situation owing to broken health. I have repeatedly called the attention of the managers to this, as the probable result of bad lighting and bad ventilation.

premises that could affect the one room more than
d that the room occupied by the cheerful workers
ed, and the room occupied by the melancholy workers
yellow ochre. I had the yellow ochre all washed off, and
gs whitewashed. The workers ever after felt more cheerful
After making this discovery, I extended my observations to a
ber of rooms and garrets, and found, without exception, that the
of the whitewashed rooms were much more healthy than the occu-
yellow or buff-coloured rooms, and, wherever I succeeded in inducing
cupiers of yellow or buff-coloured rooms to change the colour for white-
n, I always found a corresponding improvement in the health and spirits
the occupiers. From these observations, I would respectfully drop a hint
to the authorities of schools, asylums, and hospitals, to eschew yellow, buff, or
anything approaching to yellow, as the ground colour of the interior of their
buildings."

The colour that I should be inclined to suggest,—instead of *white*-wash, the glare of which must be hurtful,—is a light French grey. The girls' model school at Norwich is coloured a deep blue; it is entirely lighted by skylights, and, to me, there is always an uncomfortable feeling when inspecting it.

Letter on sanitary state of school premises.

I cannot do better than refer here to a circular addressed to Her Majesty's Inspectors of Schools, by direction of the Lord President, containing instructions for the Inspectors' guidance, with regard to the sanitary state of the schools under inspection, and some useful advice to be conveyed, through them, to the managers of schools:—

"The attention of the Lord President has been called to the extreme importance of providing that schools are held in wholesome rooms; that the hours of continued attendance are not excessive in proportion to the age of the children; and that the premises afford the means of healthy recreation.

"A very cursory acquaintance with the correspondence which passes through this office would suffice to show that the conditions insisted upon by the Committee of Council are maintained with extreme difficulty, and that some of them (for instance, sufficient playgrounds in the densely peopled quarters of towns) have frequently to be waived, as impossible to be complied with.

"It might, however, tend to create a more active public opinion upon the subject, if Her Majesty's Inspectors were to make a point of inquiring into the sanitary condition of every school which they inspect, so far as to direct the attention of the managers to anything strikingly prejudicial to health, in the state, or in the rules of the school.

"Floors which admit of no body of air beneath them; a few small windows low down in the walls and kept closed, instead of many large windows near the ceiling and freely opened; excess or deficiency of warmth; the omission to establish a thorough draught of air in the rooms for a considerable time between morning and afternoon school,—more especially if, as is often the case, a certain number of the children dine in the same rooms during some part of the interval,—are all points to which you might call attention.

"Infants, in particular, require to be relieved by frequent alternations of exercise in the air, and of lessons in school. You should constantly press upon the attention of the managers the importance of providing for something of the kind by the best expedients of which the circumstances admit.

"If the common elementary schools in towns, where the sanitary evils are the most felt, began their daily work at as early an hour as that observed in schools for the wealthier classes, at least one half-holiday per week, besides Saturday, might, without loss of lessons, be taken for a walk by the master with all the boys, and by the mistress with all the girls, into the country.

"These walks (for the boys and girls respectively) might be taken on different days, or in different directions, or together, as the managers might think best. The more scope they can be made to afford for unrestrained exercise the better.

"The confined sites of schools in towns often render it impossible to place the offices at a proper distance from the main buildings. Cheap means of obviating some of the more glaring inconveniences arising from this cause may be seen at almost every railway station, and should be adopted by the managers of schools so circumstanced.

"I have the honor to be, &c.
(Signed) "R. R. W. Lingen."

I subjoin, also, some particulars obtained by inspection, which may be thought worthy of attention. The first is a statement from the Rev. John Menet, the able and zealous Principal of the Hockerill Training College, Bishop's Stortford:—

"I thought that you would like to hear that the introduction of skylights has proved a very successful experiment. We commenced by blocking up a window in the infant school which gave a disagreeable cross light, and inserted two skylights, each 8 feet 6 inches by 4 feet; the improvement was so remarkable that we added two more slylights, and the result is that we have a room which appears much larger, and is thoroughly well lighted. Every one who sees the room is struck with the improvement, and I am quite sure that no one who knew it in its former state can fail to contrast the broken light which we obtained from the lattice windows with the clear and uninterrupted body of light obtained from the roof. The same course has been pursued in the mixed school; two windows at the back of the desks have been blocked up, and in another week two skylights will have been introduced in this room and one in the class-room.

"The tiles were simply moved as you suggested, and three sheets of the thick glass laid on the rafters and cemented in. The cost of the glass was 50*s*., and the labour amounted to eight or ten shillings for each skylight; blinds have been provided where they were necessary. It is impossible for me to avoid the conclusion that our modern school-rooms, with high pitched roofs and lattice windows, would in most cases be immensely improved by similar treatment.

"An air of cheerfulness is at once secured, and the facility of working the schools is much greater.

"I have the honor to be, &c.
(Signed) "John Menet."

Ipswich, St. Peter's.—Newly ventilated by skylights.

Witham.—Large panes put in for 2*s*. 6*d*. a pane, the light being 4 feet by 1½, and four to a window; 10*s*. for the whole.

Saffron Walden.—A skylight has been put in, at a cost of 3*l*. 3*s*.

Hockerill.—None can tell the relief the new skylights afford to the teachers.

Southampton, All Saints'.—Nothing is so fatiguing as inspecting a school lighted as these are. The consequence is want of energy in the teacher and want of attention on the part of the pupils.

It is of the greatest importance to attend to the lights; at Wivenhoe I was much more fatigued than at Whitelands, though much more actively engaged at Whitelands. I attribute this to the windows.

Chelmsford.—Mistress says the effect of the skylight is as if a weight had been removed from her head. Pupil-teacher Gesani complains that the light has caused partial blindness.

Condition of schools.

Of the 205 schools inspected, forty-one may be reported as being really efficient, and many of them excellent, offering, not merely an ordinary education, but, as good an education as I conceive to be possible, taking all the circumstances into consideration, *i. e*, the age and social position of the scholars; but, of thirty-five, I am obliged to add an opinion that they are so defective in every respect,—teachers, fittings, books, apparatus, and general *morale*,—that it would be better if they were entirely closed, as they only impede progress to a better state of things. On the whole, it is almost better to have no school than a very bad one. The remaining 129 schools are more or less efficient; some are progressing, others remaining stationary, and some, I fear, retrograding.

Norwich.

I regret that I am not able to make a more satisfactory statement, in this year's report, regarding the education provided for the town of Norwich, than that contained in my last report. Not a single school has been added to my list; nor, as far as I am aware, have any improvements been made in the existing schools; and there are no additional applications for pupil-teachers. The model schools, both boys' and girls', have attained great excellence, and maintain a considerable and well-deserved reputation. The school of St. Stephen's also is progressing, and St. Mark's Lakenham is doing well.

Ipswich.

The very excellent schools at Ipswich have been yet further improved. To St. Matthew's, a large infant school is being added. The girls' school of St. Peter's is made at once more healthy and more pleasant by a new skylight and excellent ventilation. The schools of St. Clement's are to be entirely re-ventilated and re-lighted. The boys' school of St. Peter's has been refitted, and the schools of the Holy Trinity district have been ventilated, but scarcely with due effect.

Colchester.

At Colchester new life has been infused into all the schools and I have no doubt that they will soon rival the best in the district.

West Ham.

The school at West Ham maintains its reputation, and will well repay a visit. It is only four miles by Eastern Counties Railway from London; and I may add that both the manager, the Rev. A. Ram, and Mr. Self, the master, will welcome any friend to education that desires to see the school in working.

Yarmouth.

At Yarmouth the progress is most encouraging, and St. Peter's boys' school is one of the best in the district.

Lynn.

At Lynn the schools are very good.

Rural districts.

There are several very excellent schools also in the rural districts, which I have not space to particularize here.

On the other hand, there are several small country towns in which no progress has been made. I name Diss and Stowmarket. Diss and Stowmarket.

Many more schools have been added to the list of those under inspection since your Lordships' grants have been (temporarily, I presume) less restricted. Most of these schools are at present in a defective state, but the fact of their being placed under inspection shows a desire on the part of the managers for their improvement, which cannot fail of success; and I can answer for Mr. Campbell, as well as for myself, that no exertion or sympathy shall be wanting on our parts to render them all the aid in our power. There is no doubt that, in many instances, the hope of obtaining the capitation grant has been the chief inducement for managers to place their schools under inspection; and thus they may ultimately obtain improved apparatus and books, as also certificated or registered teachers. Numerous schools added to inspection list.

Your Lordships will allow me to suggest that some regulations are needful as to the method of applying capitation grants. It seems to me that they should be exclusively used for the benefit of the school *generally*, either in augmenting the salary of the master (only in very poor places, as there are other appointed means, *i.e.*, by certificates, for this purpose,) or in providing a larger stock of lesson-books and maps, in improving the fittings and apparatus, in obtaining better ventilation and light, or in furnishing libraries for the scholars. The capitation grant indeed, is now mostly applied to the general purposes of the school,—sometimes to the master's salary, sometimes to relieve the managers from previously incurred debt, in rewards to the children who have made up the required number of days in attendance, or, more objectionably still, in actually refunding to them so much of the money paid in school fees as the capitation grant will cover. There is also the greatest difficulty in checking, in any way, the manner in which the attendances are reckoned. In one school was shown to me a list of children said to have attended the required number of days, which contained more names than the total average attendance of the year. There was small difficulty in persuading the managers to withdraw the claim altogether. In this case, I am persuaded, there was no intention of acting unfairly, but simply a misapprehension. Suggestions as to application of capitation grants.

I have long been of opinion that ultimately it will become necessary to establish a minimum scale of books, apparatus, &c., and that no school that is not so provided should be entitled to participate in Government grants, or, at least, that all such grants as may be made should be primarily applied to supply what is defective. It must be remembered that the Scale of books and apparatus.

object of making Government grants is, not simply to support the schools as conducted ten or fifteen years ago, but, to make them so completely efficient as to provide the most advanced education that is compatible with the circumstances of the children to be taught in them.

State of school funds.

I am here compelled to call attention to the complaints, now too universal, on the part of the managers and the clergy respecting the condition of their school funds. These complaints seem to me on the increase, and I find that the impression as to the difficulties of establishing an education rate is by no means as strong as it used to be. I confess to a belief that the establishment of a rate would be the right plan. To throw upon the general funds of the State, the burden of schools which improve the labourers on private property, appears to me to be as unfair as it has been hitherto to throw the same burden upon charitable persons, however, willing they may be. I conceive, that it is the duty of everybody having property to provide for the education of those who make property valuable. It seems to be not simply the duty of the Christian but the duty of the citizen. There are many parishes owned chiefly by one proprietor, whose estates perhaps are encumbered, and who resides at a distance, or else some public body is the chief proprietor, and yet frequently neither the single proprietor nor the public body contributes towards the support of the school, which is maintained by the clergyman and by small subscriptions from minor proprietors and tradespeople, and by capitation and other grants out of the Parliamentary vote.

Education rate.

New schools not so much needed as improvement of existing schools.

I am confirmed in my opinion of last year, that, in this district at least, new schools are not now required so much as that every school already built should be improved to the utmost, and that the number of schools not yet under inspection, which is very considerable, should be attracted to invite inspection by the annual and permanent advantages offered. The newly introduced capitation grants have already had this effect, and will, in due course, gradually bring the managers of most schools to make application for them. There exists, however, a large class of schools wholly or in part endowed (but only with small funds), the managers of which will not or cannot, from various causes, be induced to seek this aid. These schools, at present, are under no external control or authority; it is possible that many of them may be well conducted; but it is to be feared (from prevalent reports) that some are not so, that the most efficient masters have not been elected, that the best methods of instruction are not adopted, nor the best apparatus and books provided. The National school of the village, or that of the next parish, will possibly

Endowed small schools.

draw away the scholars, leaving the master a sinecure; or, should there be rewards for attendance at such schools till a certain age (say thirteen or fourteen), such as apprentice fees, clothing, &c., the endowed school will retain the scholars to the manifest injury of the general education of the place. That there are places so circumstanced is by no means a mere supposition; and it seems to me that the time is almost arrived when some legal authority should be created, and exerted, to compel the trustees either to perform the duties involved or to resign their office; and this becomes the more obligatory as the trustees chiefly belong, or should belong, to that class which does not use the schools, being selected purposely from an upper class, because supposed to be placed above the necessity of acting from mere favour or any undue influence. I believe that many trustees would be glad of the assistance thus proposed.

Extracts from daily reports of inspection.

I have extracted from my daily reports the following remarks relative to various schools in my district. It is a known fact that those under inspection are mostly the best. These extracts will prove, then, how much need there is of a further general improvement.

I have added some passages from the letters of clergymen and others, which contain useful information.

———— Wretched schools. Population, 5,000. The trustees are opposed to the education of working classes, and carry out their principles.

———— Population, 4,000; children, 111. Badly fitted room; brick floor; books and apparatus wanting. It is evident so large a population should produce more scholars.

———— A very inferior school; manager complains that all the expense falls upon him.

Catfield school is given up for want of funds.

———— A wretched room; brick floor. 40 miserable children, under an old dame, huddled round a fire, with no order, discipline, or rule. Few, and those only religious, books; and a parade of "National School" over the door, in large letters.

———— A small village school. Mistress totally untrained. No books but torn Bibles. Salary 11*l.* per annum, 8*l.* from managers, 3*l.* from children's pence.

———— Nothing can come of such schools; they ought to be swept away. The mistresses have not even the virtues of the old dame, and the total dirt and destitution of the miserable buildings, the wretchedness, the poverty, the absence of books and intelligence, make the work of inspection a most unpleasant duty.

———— A very nice neat school, with very little knowledge, great order, quiet, tame, and unintelligent *good children;* but what will they be as *men* and *women*? Only the 1st class can write their names, and none can work simple multiplication of three figures. Scripture knowledge alone is imparted.

———— A decrepid old man the master; books and apparatus defective; offices in miserable plight; Bibles torn and dogs-eared; altogether a disgrace to civilization.

———— About 5*l.* spent in books, &c., would make a good school, if placed under an intelligent teacher.

———— School in a church, and very badly conducted.

———— United salary of master and mistress, 52*l.* per annum.

Bentley.—Managers have done all they could, but the school is only one half full; other schools have been opened in the neighbourhood. Master certificated, 2nd class, 2nd division, gets 20*l.* augmentation. There are 54 scholars.

Little Bentley.—Master put in to save the parish; he is paralytic.

Hadleigh, Population, 3,000; *Boxford; Bilderstone.*—Excellent schools in every respect, but scholars are not attracted to them. The population seem not to appreciate a good education. It is disheartening to hear that schools conducted by untrained and almost uneducated teachers are established in the neighbourhood, which are well attended, and yet which cannot pretend to offer the advantages possessed by these.

——— Cost to the Government, 60*l.* for 114 children.
——— The Government pays 48*l.* for 117 children.
——— Costs Government 43*l.* for 56 children.

"Sir,—In reply to your circular, I am sorry to inform you that we have not any school at ——— at present, it having fallen into decay for want of funds. If the Committee of Council insists that the money locally forthcoming shall consist of subscriptions to the above purposes, I shall fail again entirely. With *not one* landowner resident, and all the tenants *small* tenants, who think education a very bad thing, how *can* I obtain much by subscription? But, if they will admit as such the accumulation of interest, &c., I do fervently hope I shall succeed at last."

"Nothing has been done in the way of fittings. The capitation grant has all been applied to help to liquidate a debt upon the school."

"My school has sadly fallen off in numbers. There are now in ——— one grammar, two National, and four dissenting schools, besides two schools close to ———, and yet numbers are uneducated."

"I am sorry to say that our governess left us very suddenly, early this month, and up to the present time we have not found any one to take charge of the school, which is consequently closed. We have at present nothing going on but an attempt on the part of myself, and members of my family, to instruct in the evening some young men and large boys."

"I am obliged to take a few of the larger children at my own house, and to put the smaller under a respectable widow at the school, superintended by myself, or a member of my family, and visited constantly during the week. I have a few subscriptions from my parish, besides which it is almost entirely supported by myself and family."

"Mr. ——— presents his compliments to Mr. Mitchell, and begs to acknowledge the receipt of his letter proposing to visit his school on the 21st inst. Mr. ——— has no pupil-teachers, nor any Government grant, and his school is only such as is appropriate to a retired country parish; he will, therefore, decline Mr. Mitchell's inspection, as Mr. M., on the last occasion of his visiting it, did not appear to think it worth his examining."*—Population, 791.

"A little misunderstanding arising between the incumbent and myself, caused us to give notice; we then had an appointment, from the strong testimonials we sent in, to an endowed school; the stipend was only 20*l.* per annum, and no neighbourhood to gain a school; however, we remained there one year and nine months. You will perceive why we have left ———; the duties my husband had were a weekly distribution of flour to the poor, in half stones, a distribution of coals, and a retail stationery depôt; each of these were in buildings adjoining the school-house, and required the attention of the master; of course they were very interfering with scholastic duties."—*From a Schoolmistress.*

"This morning your letter arrived, and I answer it with all possible despatch. With regard to 'pupil-teachers being examined in drawing,' there are

* I have no recollection of having seen the school.—M. M.

none at —— ——, and never have been since Adam left Paradise, and as long as you like before! Nor shall it cost me many tears if there never shall be any among the poor half-starved infants of this parish, the children of labourers, *and not one else*, till the last sun sets upon our doomed and mysterious world! In my last, and one or two before, I stated 'the school of —— —— is little else than an infant school about a year and a half in existence.' The chief of the children know their letters; some can spell; a few can read; and a few can write, and, as to the proficiency of the most forward in figures, it scarcely deserves being mentioned. You need not, therefore, trouble yourself about drawing inquiries for —— ——, as none will be necessary. The chief thing we want is money, and, if you cannot take us under your wing in that respect, we must give up our little seminary, and banish our hopes to the winds."

"I believe, if every parish were compelled to pay a rate towards education, as they now do towards the support of the poor, roads, &c., people would seek to take advantage of the provision towards which they pay who now shun education on account partly of the yearly cost of maintaining the schools they don't like to subscribe to. They (at least many) ignorantly imagine that by avoiding schools they may save their pockets. But, make every one pay towards education, and they will seek to have a return for their own money by sending their own children or those of their dependants. Nor can I see any insurmountable difficulty as regards dissenters. I wont trouble you with my views on the matter, but I am satisfied a rate must overcome the first difficulty,—the want of funds; and concession from all parties must meet the other difficulties.

"My dear Sir,

"Our vicar advises me to apply to you in my great educational embarrassments.

"Possibly, you may remember our misfortunes in the matter of teacher. Muston, the senior teacher, has gone to a training college. One candidate, was dismissed for dishonesty, another was withdrawn by her parents. A third did not pass her examination, and a girl named Drury was to have been transferred from Hudson's Town to us, but was found too deficient in arithmetic to admit of her being apprenticed.

"Our two pupil-teachers, Byrer and Hudson (the former of whom is now invalided, and, *pro tem.*, unfit for duty) *leave us next June.*

"You will see at a glance how miserable is our case and prospect! For I actually cannot find candidates, and at this moment a school of 125 girls is under the management of the mistress (a new and good one) and *one* pupil-teacher. We are anxious, if possible, to find two girls who could pass a first year's examination next June, and one, or perhaps two, who might be presented as candidates at the same time. My immediate locality is barren of any such; meanwhile our mistress is being discouraged, and our school injured, and this, I must say, from circumstances beyond our control. Knowing the kind interest you take in the schools of the parish, I have laid out our case 'in all its deformities' before you!

"Can you help us to teachers, or advice, or suggestion?

"Faithfully yours,

(Signed) "Stopford Ram."

Pictures and prints.

I could wish it had entered into the plan of the revised book schedules to have allowed of the introduction of pictures and prints. These may not, perhaps, be essential to all schools, but no infant or, indeed, juvenile school can be at all complete without a good supply, both on biblical and on secular subjects. Messrs. Roake and Varty have published some good scripture and history illustrations. The National Society, also, has some good illustrations of both subjects; and I can, with confidence, recommend the scripture illustrations of Schnor,

published by Messrs. Norgate, Williams, and Co., as at once cheap, excellent, and artistic. Mr. Hering, of Regent Street, also, has published some artistic works of this class.

Casts.

I conceive too that a small grant towards a supply of casts, to be used both for drawing and for ornament, and for the cultivation of a taste for art, might be not unaptly made to large or model schools.

Grants for chemical apparatus.

There has been as yet no application for grants towards a supply of chemical apparatus for any school of this district. In some of the model schools this apparatus might be useful; but my opinion is that in most of our country schools the introduction of scientific apparatus would not be advisable; the teachers having quite enough work on their hands to get their pupils to master the ordinary subjects of education. We may run the risk of losing what we have by grasping at too much; and I am doubtful whether we have not already done so. Reading and writing are neither of them so good as they should be in any school of the district. In our large schools, I believe that this arises from a too great extension of the subjects of instruction. A boy of twelve or thirteen can acquire only a certain knowledge of certain and limited subjects. Whatever he learns, he should learn well.

Educational museum.

I may here be permitted to refer with satisfaction to the intended opening of an Educational Museum, under your Lordships' charge, in the new buildings which have been erected at South Kensington (Cromwell Road), upon the ground purchased by the Royal Commissioners out of the proceeds of the Great Exhibition of 1851. The public will thus have an early opportunity of reviewing the objects which were exhibited under the auspices of the Society of Arts, at Saint Martin's Hall, in the summer of 1854, and which are to form the nucleus of this new exhibition.

Play-grounds.

It is highly important that playgrounds should be attached to every school building; and I think that, however great may be the expense, it should be borne; it should be even insisted upon. The friends of education and of childhood, and the working classes, ought to be grateful for the attention which your Lordships have given to this important addition to school premises.

School libraries.

It would have been a pleasure to be able to add some encouragement to managers with regard to school libraries. There are, however, so many difficulties in the way that no definite decision can be at present arrived at. I believe, myself, that, if looked steadily in the face, these difficulties would prove to be of less consequence than may be supposed; but I am not in a position to speak with confidence on the subject.*

* I am informed that the National Society is about to publish a series of cheap and appropriate library books for elementary schools.

Age and attainments of children in schools.

The attainments of the children in schools inspected are certainly much in advance of what they were ten years ago; but we may justly look for a still further progress in years to come. By the aid of grants, books and apparatus, &c., have been furnished; educated—*really** educated masters have been supplied, most of whom have been hitherto only just growing into power; new and abler, *i.e.*, quicker and more accurate, methods of instruction have been adopted, and a wider range of subjects has been generally introduced. All this promises progress. There is only one drawback, and that is the early age at which the children leave school, and which, I am afraid, is actually on the increase.† To this drawback may be added

* I must add that some of the most efficient teachers in the district belong to that period of school-keeping which dates before 1846.

† The following lists show the actual age of the children of two of our best boys' schools and one of girls' school; being town schools, the average age is, of course, higher than it would be in country places :—

Battersea (Boys').

——	No. of Class.	Average Age.	Age of Eldest Boy.

the great changes that take place among the scholars, even in the best schools. In some cases, as many leave and are admitted to a school in the course of a year as the whole average attendance. I see no remedy for this evil, except the better instruction of the parents, who often, for the slightest causes, remove their child from one school to put it to another. In time they may become aware of the positive evil of such a practice, and may learn to adopt a steady perseverance in a good course well begun. The prevalence of this evil makes it absolutely incumbent upon all who have any control over education to put schools on a good footing, and to adopt, as far as possible, similar methods of teaching, and the same class-books, maps, &c.; as, by so doing, the injury will be in some part diminished. School certificates will be of much use in these cases; and the rules of schools might be carefully formed with reference to this point, and might be either relaxed or made more stringent, avoiding all appearance of dictating, yet maintaining a discipline firm and true.*

Music. I regret that the teaching of music by notes forms so small a part of the instruction in this district, and I believe that this is greatly owing to a general inability of the teachers to play upon an instrument.† The Principal of the Battersea Training College, has requested me to observe that, if pupil-teachers were taught in their apprenticeship, not merely how to read music, but also, how to play upon some instrument,—as the violin, flute, or piano,—it would, perhaps, do more to advance this branch of education than we can imagine. Ever

* Extracts from the Rev. J. D. Glennie's Report to the London Diocesan Board:—"In the first place, then, let nothing appear on the printed rules of a school that cannot in practice be enforced to the letter. The presence of one regulation, however good in theory, which cannot in every case be maintained in practice, weakens the force of the whole code. After this precaution has been taken, let all combine to have the rules observed thoroughly. A consistent course of conduct in this matter will claim respect for the school, and tend materially to get rid of the fatal notion, often prevalent among the parents of school children, that, by sending them to school they are conferring a benefit on its supporters. The first introduction of such measures may possibly thin a school for a time, but a perseverance in them will certainly increase the original numbers. The respect and value for the school in the eyes of all in its district, as well as its intrinsic usefulness, is greatly enhanced by the subsidiary good that can be made to emanate from it by other sources besides that which supplies education for the children. A good school will possess its lending library, clothing club, shoe club, and savings bank; institutions whereby, in administering to the outward comforts, and assisting parents as well as children in their exertions of forethought and economy, good moral habits are induced. Institutions similar in nature to those I have alluded to above are not, however, by any means, according to the managers' returns, so frequently appended to the schools as ought to be the case. Much, therefore, that is valuable in the influential position of the schools is lost by the want of these. Next to the church, the school-house of a parish should be the building to be regarded with the most respect, on account of the large measure of good that flows therefrom upon the whole community."

† Harmoniums may now be obtained at a reasonable price, and would teach organ fingering.

so little progress thus made would be exceedingly valuable, and would effect, in after years, a great saving of time to the student at the training college.

Some few of the schools in the district learn drawing; not so many as could be desired. Managers, it is to be hoped, will pay attention to the subject. It is not to be taught as a mere accomplishment, but as a chief means of improving the power of observation. Drawing.

It would be well if "learning by heart" were well cultivated in the district. It is practised in some schools; it ought to be in all.* On this subject I would claim permission to insert some excellent remarks from the Rev. J D. Glennie, the able Inspector of the London Diocesan Board of Education, in his valuable Report for 1855 :— Learning by heart.

"In inspecting a school, wherever I have judged, by the 'Teacher's paper' put into my hand, that the standard to which the children have been brought is sufficiently high for the purpose, I have conducted some portion of the examination of Class I. on paper, by requiring to have written for me from memory some Scripture biography, or other subject, and, at the same time, I have had examples in arithmetic worked with pen and ink. Besides, by this means, saving time to myself for other things, (for I look over these exercises at home,) I find this one of the most valuable methods of testing the solid and practical nature of the course of instruction to which the children have been subjected. And I take occasion to suggest, as I have repeatedly done at my visits to the respective schools, the importance, to both teacher and pupils, of periodical (say monthly, why not daily?) exercises of this kind being performed. To the teacher it is of importance, because, by this process, a knowledge is arrived at of many an instance of ignorance and misconception on the part of the children, which otherwise would never have been brought to light. To these immediate points attention can now at once be directed. But the teacher also sees whether the instruction offered is being habitually imparted in such a manner as to reach the minds of the children, and store them with knowledge, in so intelligible and well arranged a manner, as that they have made the matter their own, and can now reproduce it in a good form of their own.

"To the children, again, this is an important system, because it is one by which they are being brought to put their various attainments to practical use, and which is perfecting them in that very branch of their education by which, more perhaps than by any other, the value of the instruction they have received at school will be judged of, by themselves as well as by the world with which they will have to struggle."

The lessons in the gallery, I fear, are getting to be an evil; they too frequently become by force of habitude mere "babble." No gallery-lesson should be given unless it be afterwards reproduced in writing by the listener; and the length of these lessons should seldom exceed twenty minutes or half an hour at the outside, according to the subject and the age of the children. Gallery lessons.

* *Bilderstone.*—Some of the boys recited (and very well) passages from Shakespere got by heart; it is said to break them of speaking with the Suffolk dialect and drawl.

Bible lessons.

Bible lessons, there can be no doubt, are excellent things, but I have some hesitation in believing that ordinary masters possess power or knowledge sufficient, or time to acquire the power and knowledge to provide their scholars daily with interesting matter and such as is profitable. There are few clergy that could thus instruct a congregation, morning and evening. It seems to me to be an object very desirable, but hardly possible, to accomplish; Bible lessons twice a week would, I believe, effect more real good than is now effected by their daily repetition.

School hours.

Managers of schools have asked me what ought to be the hours of school work. The hours are generally from 9 to 12, and 2 to 5 in summer; and from 2 to 4 in winter; and I think this standard should be maintained. Sometimes I hear that one hour of this work has been reduced, on the plea that the master has his pupil-teachers for an hour and a half. I cannot think that this is right.

Industrial work.

It is to be regretted that industrial work in boys' schools is now entirely abandoned. In girls' schools it is mostly confined to sewing.* There is no cookery or household work; and I confess that the difficulties with regard to these subjects seem to me insurmountable.† Botany is taught, and well, in Professor Henslow's school, as Mr. Campbell informs me. A good system of drill should be introduced into all boys' schools.

Scholars' certificates.

The certificates issued to scholars have as yet been not very successful, but I hope next year to be able to report favourably of a measure which, when it comes to be more known, will doubtless be a great agent for good.‡

Pupil-teachers.

The pupil-teachers of the district are going on very well. One ran away; his doing so was a relief to everybody, *i. e.*, to all he left behind.

Queen's Scholars.

All the candidates that went up for Queen's scholarships, at the last Christmas examination, obtained them, in this and my late district, and six of the males were included in

---

* Some excellent observations on needlework will be found in the Report of the Rev. J. D. Glennie to the London Diocesan Board for 1855.

† "King's Lynn, St. Margaret's, 30 January 1856.—I wish to introduce into this school a knowledge of drawing, which would be useful to shipwrights, carpenters, bricklayers, and builders generally, and should be glad to receive information and advice as to the best mode of proceeding. I would also gladly introduce into the girls' school a practical knowledge of household work, if I had a spare room of sufficient dimensions to carry on a little washing, ironing, cleaning stoves, and other domestic operations."—*Rev. Canon Wodehouse.*

‡ At a recent examination of the school of St. John's, Lynn, on the distribution of certificates to some of the scholars who had left the school, the very excellent Secretary of the Stanley Library, H. Edwards, Esq., informed the recipients that they would be entitled to a free admission to that institution for the ensuing year, on showing their certificates.

the first nineteen places.* Three of the female candidates were also included in the first seventeen places of the class list. The total number of candidates in England was 1,024; of whom 410 were male pupil-teachers, and 359 female. Of the male pupil-teachers, 364, and of the female, 288 were successful. The total number of candidates that obtained Queen's scholarships was 766.

Great attention will now be paid to methods of teaching, since Mr. Temple's letter to your Lordships insists so much upon it. It has always been a prominent matter of interest in this district. I subjoin extracts from Mr. Temple's letter, for the information of managers and masters. Methods of teaching.

"15 July 1856.

"THE chief point to which Mr. Moseley directed my attention was the necessity of giving greater encouragement than had yet been given to the study of methods of teaching, and of school management. He was of opinion that, in spite of whatever efforts might be made by the authorities of training colleges to give to this study its proper prominence, it would be impossible to secure full attention to it without more definite encouragement from the Committee of Council. These representations have since received additional force from the concurrence of several of my colleagues, Her Majesty's Inspectors of Elementary Schools, in expressions to the same effect.

"I have, therefore, thought it my duty, on my visits to the training colleges this year, to examine the students more particularly on this subject. I have endeavoured to ascertain how far they had been led to reflect upon their future duties, and to master the principles of the methods which they have seen exhibited in the practising schools, and which they will hereafter have to employ in their own professional labours. And I have hitherto found everywhere, on the part of the authorities in the training colleges, much more desire to teach this subject than success in teaching it. It is excessively difficult to secure from students thorough hearty study of any subject that does not appear to them to bear upon their places in the annual class list, with a weight proportioned to its difficulty. The study of method, occupying only one paper at the examination, appears at present to have no more

---

weight than that of history or geography. Yet there can be no doubt that it is far easier to acquire a knowledge of one of these subjects than a real mastery of the art of teaching. The latter has consequently suffered. I have everywhere warned the students that attention has been called to this deficiency, and that attempts will be made to correct it.

"I propose, therefore, that in future examinations not less than one-third part of every paper shall be confined to questions on method. These questions should be such as to test the candidates' knowledge of processes of teaching, their power of applying the knowledge of higher subjects to elementary instruction, their power of preparing distinct, full, and methodical notes of lessons, their power of writing explanatory notes on passages selected from the ordinary reading-books, and their knowledge of the proper use of illustrations.

"It is not to be expected that, even with this stimulus given to the study of the art of teaching, the students of the training colleges will be found to be accomplished teachers from the very day of their leaving college. They must still need experience, and must still be liable to the mistakes from which the best training cannot save young men. But it may be hoped that they will have been induced to acquire that clear knowledge of the principles of their profession which is needed to make actual experience speedily useful."

Increase of salary to successful masters.

I have already, in previous reports, suggested an increase either of pay or honor to such teachers as conduct their schools pre-eminently well, and whose pupil-teachers prove to be most efficiently taught. At present there is no special reward, however well their duties may be performed, and however much of extra time, labour, and talent may be employed for the purpose. The man who just manages to pass muster on inspection of his school, and whose apprentice fails to get a Queen's scholarship, often receives higher pay than another whose school is a model, and whose pupil-teachers invariably obtain first-class scholarships.

Organizing masters.

The appointment of good organizing masters is a question worthy of consideration. They would be especially useful in agricultural districts, where good methods of teaching are of more consequence even than in larger places.

Favourable report of teachers.

It is great pleasure to be able to make very favourable reports of the schoolmasters and schoolmistresses of the district, most of whom are working zealously, in a full sense of the importance of their position and the value of their labour. Two mistresses obtained certificates as infant school teachers at the Easter examination, in 1856; and one master was registered at the same time as qualified for the instruction of pupil-teachers.

Training colleges.

The following extracts from the annual reports of the Training Colleges more immediately connected with the district will be received with satisfaction. I regret that the funds of each institution are in such state as to cause much anxiety to their well-wishers.

Norwich.

Norwich Training College.—"At the last Government examination at Christmas 1854, of the nine candidates for certificates, the whole were

classed in the following order :—five in the first, two in the second, and two in the third class.

"It was particularly gratifying to the Managing Committee to learn from Mr. Cook that the Norwich students had distinguished themselves in the paper on domestic economy, and in their trial of skill in needlework.

"The Committee are the more anxious to make these facts known as there is an impression abroad, to the disparagement of the modern system of training, that domestic economy, and the things pertaining to the affairs of daily life, are neglected, for the cultivation of higher pursuits and studies; whereas, in truth, there never was a time when the attention of teachers was more carefully directed to the class of subjects included under the head of 'common things' than it is at the present moment; or when the prospect of improvement in cottage economy, through the instrumentality of our elementary schools, was greater.

"The usual printed report of this board has been received, and in the general report some valuable remarks are made with respect to the amelioration of the system of juvenile field labour, called the 'gang system,' so very prevalent in that neighbourhood, and which hitherto has been the source of vice and immorality; in some places 'the principal inhabitants and employers have resolved that no child shall be received into a gang under nine or remain in it after fifteen years of age; that boys and girls shall work in separate companies, that the former shall be placed under a respectable man, the latter under that of a well-conducted woman or widow.' It is hoped that some arrangement of this kind may be generally adopted, as the gang system, as hitherto conducted, has been detrimental to the learning and morals of the young."

Hockerill.

Hockerill Training College.—"The Christmas examination commenced on the 10th of December, and was conducted by Her Majesty's Inspector, Rev. D. J. Stewart. 42 candidates were examined, all who were eligible by their term of residence being presented. 20 of these were students of the second year, and 22 of the first year. 39 were classed, viz., 20 of the second year, and 19 of the first year.

"Seven drawing prizes were awarded.

"The Committee have received very satisfactory reports up to this time of those who have been placed in charge of schools. Their character and conduct appear to have gained the confidence of the managers; and they seem to be devoting themselves in the right spirit to their work.

"An attempt has been made to supply some knowledge of 'common things,' in addition to the regular subjects of instruction. The pupils become practically acquainted with ironing and laundry work; and a room has been fitted up as a practising kitchen, in which the students prepare small dinners during their second year of residence, and are taught some of the simple economy of cooking under the direction of the superintendent. A fair portion of time has been allotted to cutting-out and needlework in general; and the Committee have no reason to believe that those who have been sent out as mistresses have been found deficient in this respect."

What is wanting in pupil-teachers training.

The Rev. the Principal of one of these institutions writes to me as follows (Dec. 1856) :—

"I may say to you privately that I have this year sent away nine incapables during probation, and have refused three pupil-teachers, (two from bodily infirmity,) in order not to keep hopeless material.

"My experience of pupil-teachers, generally speaking, is that they want accuracy, and are not sound in their work; I believe they also suffer from being compelled by the broad sheet to grasp too much. We have had some remarkable exceptions, but as a general rule they have shown little trace of cultivation of mind or accurate habits of thought.

"I want such a training as shall preserve, develope, and strengthen every power of mind and body, and lay a good foundation, for the energy, decision, and moral weight of the future teacher."

I believe that the foregoing subject of complaint is gradually becoming less an object of concern, and I call attention to it only that teachers and managers of schools may know what is really wanting in the training of their pupil-teachers.

Home and Colonial Society on infant teachers.

I beg leave to add an extract from the annual report of the Home and Colonial School Society, who, I am glad to think, have taken up, and are promoting by every means, the development of the instruction of teachers for infant schools. The last paragraph, quoted from a letter of Her Majesty's Inspector, Mr. Cook, combined with the first paragraph of the extract which precedes the following, shows how necessary it is for your Lordships to maintain the present standard of examination, and proves also how many patrons there still are whose notion of what a school mistress' acquirements should be remains defective.

"This class, of infant mistresses, now contains 25. The Committee have found considerable difficulty in filling this with students whose education is sufficiently advanced to enable them in one year to attain the Government standard. They would wish to see females from 25 to 35 engaged in these schools; and persons of that age, owing to the indifferent state of education at the time they were at school, are in general very deficient. Besides which, an erroneous idea extensively prevails that the teacher of juveniles is the more honourable post.

"The Committee are not of this opinion; they think that a really good teacher of infants exhibits more mental power, more knowledge of children, more drawing upon her own resources, than a teacher in a school of older children, where books are more used, and the children can work more by themselves. The Committee cannot but hope that this prejudice may subside.

"Few labouring men's children can be decently instructed unless they go to an infant school, and for such an universal want one establishment alone is provided, which cannot be expected to train at the utmost more than 50 infant teachers annually.

"A written examination, says Mr. Cook, would be quite futile if it did not exclude candidates who spell incorrectly, do not understand or are unable to work easy sums in arithmetic, are not conversant with the leading facts of Holy Scripture, and cannot give a sensible account of the work which they will have to do in school."

Appointments to Excise.

Five of the pupil-teachers of the district have been appointed to situations in the Excise. I must confess to a regret that such appointments have been offered, as they divert the pupil-teachers from steadily applying themselves to the occupation and profession of a schoolmaster. I regret it the more, as the position sought is not in reality to be preferred to scholastic life. One pupil-teacher, in writing to me, expressly mentions that it was the intention of his father that he should be so appointed, and that he never intended to be a teacher.

"I also state that it was always my wish to get myself placed in active service under Government, and with my lamented father's wish and consent was made pupil-teacher for that purpose."

The following letters will show the real reason why pupil-teachers out of their time do not enter the training colleges.

Reasons why pupil-teachers do not enter training colleges.

"Reverend Sir,

"The reasons why I have given up the idea of entering a training institution are as follow:—In the first place, my salary during my apprenticeship not having been sufficient for my board, clothing, and books, &c., I have been to some extent a burden to my friends; this having continued for five years, I thought it quite time to be able to do for myself. Now, by going into a training institution I should still be dependent upon them, especially during the holidays, which, I think, amount to about three months in the year, *i.e.*, six weeks at Midsummer, and the same at Christmas.

"Supposing, therefore, that I had my last year's salary clear when I had completed my apprenticeship, and had decided upon going into a training institution, I might perhaps be able to make it hold out, or I might not; if it did hold out, I should then have nothing to start with, and it would therefore take me some time to recover myself. On the other hand, if it did not hold out, I should have to apply to my friends, who might not be in a fit state to assist me. I should then have to leave from want of funds.

"With regard to an assistant's place, my salary, though small, would be sufficient. I should, of course, be preparing for the yearly examination, and improving myself in other subjects generally at the same time; and, by continuing assistant for three years, I should probably be in a fit state to sit for a certificate, or, after remaining as assistant for one year, I might, perhaps, enter an institution for one year, and by so doing attain the same end as by going in for two years, and with half the expense.

"I remain, &c.

"*The Rev. M. Mitchell,*
"*Her Majesty's Inspector of Schools.*"

"Reverend Sir,

"In answer to your inquiries as to my motives for giving up the idea of going to a training college, I reply that the only motive that influenced me was the expense that would have attended such an undertaking. I am entirely dependent upon myself; my father, notwithstanding his comfortable income, being unable to assist me, in consequence of the heavy expenses which he has for several years past incurred for my mother's illness, and other family troubles which it is needless for me to mention; and my means at present forbid the attempt which I should otherwise this year have made. I have not entirely relinquished the idea of going to a college, but for a year or two I must postpone it, for the reason which I have stated. I have seen a paper lately issued by the training college at Saltley, near Birmingham, containing the provisions made by the Committee of Council for pupil-teachers who intend sitting for Queen's scholarships, and the application of which, I suppose, to be general. These are, first, that pupil-teachers, on the expiration of their apprenticeship, should be admitted into college, and be allowed at the rate of the fifth year's stipend, till the period for the examination occurs. Secondly, that a first class scholarship entitles the holder to board, lodging, washing, and medical attendance, and, in addition, 4*l.* for the first, and 6*l.* for the second year at college, for books, travelling expenses, &c., A second class scholarship entitles the holder to receive all these, minus the 4*l.* and 6*l.* for books, &c. Competition for prizes is also open to students, which affords another chance for the defrayment of their expenses.

"But with all these advantages, some of which are, however, precarious, my estimation of the expenses that would attend a two years' residence at

college does not amount to less than 40*l.*, after taking clothes, books, &c., into consideration. After coming to this conclusion, and knowing that my means would not near have equalled the expenses I must have incurred, I gave up the consideration, and accepted the situation which was offered to me at ——, as a means that would, to some extent, enable me in a year or two to accomplish that which I am aware would be for my good. In conclusion,

"I remain, &c.

"*The Rev. M. Mitchell,*
Her Majesty's Inspector of Schools."

Digest of rules of Committee of Council, published at instance of Bishop of Bath and Wells.

Before concluding my report, I must request your Lordships' attention to an admirable and concise statement of the advantages offered by the Government to managers of schools. It has been drawn up at the instance of the Lord Bishop of Bath and Wells, so well-known as the promoter of working class education, and will prove very useful to all applicants for Government grants. This digest is appended to my Report (*Appendix* C.)

Conclusion.

My report has extended to such a length that I am debarred from referring to some information which I have procured relative to the state of education in the schools of France, but which, perhaps, I may have another opportunity of promulgating.

I have the honor to be, &c.
M. Mitchell.

To the Right Honorable
The Lords of the Committee of Council on Education.

Appendix B.

The fittings for a boys' school, as recommended by me, are as follows:—

Groups of parallel desks, according to the number of scholars. In every school there will be four or five classes, consisting of fifteen, eighteen, or twenty-four boys each; in large schools the number of classes will be increased, but the divisions of work will remain much the same, *i.e.*, four, and a fifth of children in letters. Each group of desks will be divided by a curtain. Green moreen appears to be the best material for the curtains, being pleasant in colour and light on the rod. Each class should possess its own easel, black-board, and appointments; and there

* The number of Schools inspected during the year was 236; but from 24 of those no sufficient returns of income and expenditure have been received.

‡ Exclusive of Government grants.

should be a framed slate for every boy. A book box should be furnished to each class. The room also should be fitted with a gallery, to hold three classes, accommodating not more than from seventy-two to eighty children, nor less than forty-five; and these should be provided with a large black-board and easle. All the apparatus should be made of the best material and in the best style, which will be found to be the most satisfactory and the cheapest in the long run. There should be also a clock, a box of drawing models, Dexter's cabinet of objects, a library, a thermometer, and a barometer. The master should have a desk; and there should be ample cupboard accommodation.

The girls' school should be fitted in a manner precisely similar to the boys', except that the form of the desks should be different, and a work-table should be added.

Each school should be furnished with maps, comprising the World, the Four Quarters, England, Ireland, Scotland, Palestine, and the county and town (Ordnance survey) or locality in which the school is situated. These should be large wall-maps, and it will be advisable to procure different series for the two schools. They should also be varnished, and invariably exhibited to view, not in a case. A pair of globes may be usefully added. Casts and pictures may be used ad libitum. Attention should be paid to the hanging of the maps and placing the pictures, &c., so as to produce the most agreeable effect.

The infant school should be fitted up with two galleries, one for the larger and one for the smaller children, adapted to their size. The second one may be placed in the class-room. If the school be very numerous (say 200), then there should be three galleries; two to hold seventy or eighty each, never more, and one for the little infants. The principal galleries in this case should be placed at each end of the room, and the smaller gallery should be placed in the class room. There should be also two or more groups of small desks, for the elder children to write at; and also some high and low forms,—the former to act as tables, the latter as seats, so as to carry on the Frœbel system of drawing, modelling, &c. The galleries are better placed in recesses, and separated from the school by curtains. There should be at least one black-board and easel to each gallery. Frœbel's toys, and those of the Home and Colonial School Society, and numerous pictures, sacred and secular, should be hung round the room. There should be one or two tables for the mistress; also stands for reading-cards, book-boxes, and cupboards, a map of the World, of England, the British Isles, and the county and town (Ordnance survey), or locality in which the school is situated.

All the playgrounds should be well furnished with gymnastic apparatus, and, if possible, with garden beds.

Appendix C.

Digest of the Rules and Recommendations of the Committee of Privy Council in aiding the Building and Maintenance of Schools.

The managers of schools are particularly advised, after they have ascertained the general nature and conditions of the assistance which may be had, to write to the Committee of Council as the *first* step in applying the Minutes to their own several cases. Full and explicit instructions will at once be sent, by procuring which, at the outset, a good deal of delay and trouble may be avoided.

All communications to the Committee of Council should be addressed to "The Secretary, Education Department, Privy Council Office, Downing Street, London. S.W."

I. *Building and Improvement of Schools and Teachers' Residences.*

The Committee of Council give 6*s.* for every square foot of superficial area in the schools and class-rooms where a residence is included in the plan, and 4*s.* where no residence is built; provided that the owners and occupiers of property in the parish raise an equal sum. If the local contributions and the Government grant together fall short of the total estimated cost, the difference may be made up from such other sources as are available, but the grants by Government will not exceed the sum

locally raised; proceeds of old materials, collections in church, and the value of a site given may be reckoned as so much locally contributed.*

The Committee of Council require application to be made before the site is conveyed in trust, the building commenced, or any contract entered into. The needful instructions are furnished on application, both for the plans and for the conveyance.

The Committee of Council grant two-thirds of the cost of introducing parallel desks, and one half of the cost of other improvements (not being simple repairs or restorations). If a boarded floor is laid down at the same time as parallel desks are introduced, the grant for the whole cost is at the rate of two-thirds. A boarded floor is no longer a *sine quâ non* in obtaining annual grants, provided the actual floor can be reported by the Inspector to be warm and dry, and the ventilation of the room to be sufficient.

In seeking to obtain grants for the improvement of existing buildings, application should be made to the Committee of Council before the work is begun, just as in building new schools.

The site will have to be conveyed in trust, and the right of inspection will have to be legally and permanently secured to Her Majesty's Inspectors, either by endorsements on the old deed, or by a clause in the new one.

II. *School-sites.*

Great facilities are now given under the School Acts for obtaining sites for schools. Almost any property, however otherwise inalienable, to the extent of not more than one acre, may be conveyed for the purpose of a school site. The Acts of Parliament are—4 & 5 Vict., c. 38; 7 & 8 Vict., c. 37; 12 & 13 Vict., c. 49; 13 & 14 Vict., c. 28.; and 18 & 19 Vict., c. 131. When required, these Acts may be obtained on application to the Committee of Council.

The attention of the clergy is especially directed to this provision, viz:—Any portion not exceeding one acre of the glebe of a benefice may be granted by the incumbent with the consent of his Bishop, and such grant may be made to a corporation sole or aggregate. But, if the grant be made by the incumbent to the minister and churchwardens, or to the minister, churchwardens, and overseers, the consent of the patron of the benefice, as well as of the Bishop of the Diocese, must be obtained.

Different forms of trust deed are provided according to the circumstances of different parishes. The common form is to name certain managers in the conveyance, and to direct that vacancies be supplied as they occur by the subscribers. The managers as well as those who elect them are required to be members of the Church of England. An appeal is given, from the majority of the managers, upon religious questions, to the Bishop, and upon other questions to the Bishop and the Lord President of the Council, who are jointly to nominate arbitrators. The incumbent has the superintendence of the moral and religious instruction, and is a manager *ex officio*, with power to add his curate. In very small parishes, where it is not possible to form a committee from the subscribers, the minister and churchwardens may be the managers of the school.

A site may frequently be obtained by the incumbent's exchanging glebe land for other land in an eligible position, and then giving a portion of the land so obtained by exchange for a site.

III. *Maintenance of Schools.*

The grants in support of schools are made on the principle of meeting voluntary local efforts, and in no way relieve or deprive local authorities of their responsibility. The Committee of Council do not interfere in the management of the school. The grants are made on such conditions only as are required to show that the public money is turned to good account.

IV. *Teachers.*

To certificated teachers the Council give augmentation-grants according to the class of certificates held, and on condition of a certain salary being provided by the school, which on inspection must be found to be in a satisfactory state.

The highest augmentation to a master is 30*l.* per annum. To meet this the school must provide 60*l.* per annum, with a residence.

* See Minute of 2 April 1853, Explanatory Circular of 20 August 1853.

The lowest augmentation to a master is 15*l.* The salary to be provided to meet this is 30*l.* per annum, with a residence or furnished lodgings.

The highest augmentation to a mistress is 20*l.* per annum. The salary to be provided by the school, with a residence, is 40*l.*

The lowest augmentation to a mistress is 10*l.* The salary to be provided to meet this is 20*l.*, with a residence.

Where no residence is provided, an additional sum of 10*l.* in the case of a master, and of 6*l.* in the case of a mistress, must be given by the school, provided out of voluntary subscriptions. In each instance the school fees, if sufficient in amount, may reckon for one half of the sum required to meet the grant. The school must be supported by voluntary subscriptions, at least to the extent of the other half.*

The immediate pecuniary advantage to the school from these allowances is to be found, not in relieving the school fund, but, in providing better teachers than those funds alone could pay for, and thus making the school more self-supporting, through the increased payments from a larger number of children which such teachers may be expected to gather round them. Good teachers will always prove the best economy.

V. *Pupil-teachers.*

The Committee of Council allow one pupil-teacher for every forty children, in schools under certificated or registered† teachers, and which are reported on inspection as suitable for such apprenticeship. The engagement of the pupil-teacher is for five years. The stipend commences at 10*l.* per annum and rises by 2*l.* 10*s.* per annum to 20*l.* On the fulfilment of the specified condition, the master or mistress by whom these pupil-teachers have been instructed and trained is paid the sum of 5*l.* for one, 9*l.* for two, 12*l.* for three, and 3*l.* per annum for every additional apprentice.

If there be an infant school, under a certificated or registered teacher, it stands upon the same footing as a girls' school in its claim for pupil-teachers.

If an infant school, not under a certificated or registered teacher, be held in part of the same buildings as a girls' school under a teacher, who is certificated or registered, the attendance in the infant school may be reckoned with reference to the number of pupil-teachers who may be apprenticed to the mistress of the girls' school. In such cases the pupil-teachers are expected to serve by turns in the girls' or infant schools. There must be a separate mistress for the infant school, and she must be reported to be a good school-keeper, and able to superintend and to direct the pupil teachers while employed in her department. Their instruction out of school hours is to be given wholly by the mistress of the girls' school, who must be either certificated or registered.

VI. *Assistant Teachers.*

If preferred to pupil-teachers, salaries are provided for assistant teachers, but only under a certificated master or mistress; 25*l.* per annum for males, 20*l.* for females. Assistant-teachers must have been pupil-teachers, who have duly completed their apprenticeship. One assistant teacher is allowed as equivalent to two pupil-teachers.‡

VII. *Registered Teachers.*

Teachers who are upwards of thirty-five years of age are not required to gain certificates in order to qualify their schools to obtain pupil-teachers and the capitation grants. If they pass a fair examination in the subjects which enter into the pupil-teachers' course, they are "registered" as competent. Masters who omit the mathematics required in that course, may nevertheless be "registered" as sufficient to qualify their schools for the capitation grant. The best way to get registered is to attend the Christmas examination at one of the training colleges under inspection, taking the papers either of the first or second year at the candidate's own discretion. It has often happened that the candidate who has sought registration has obtained a certificate. Separate examinations for registration are sometimes (but not often) held at Easter. The examinations (registration) embrace the Holy Scriptures, catechism, liturgy, English history, geography, arithmetic (vulgar and decimal fractions) Good character and power as a teacher

* See Augmentation Broad Sheet, p. 12, in Minutes of 1856-7.
† *i.e.* registered for pupil-teachers.
‡ See Augmentation Broad Sheet.

have much consideration given to them. The object of the examination is to ascertain sound, even though humble, attainments.*

VIII. *Capitation Grants.*

The capitation grants are made to the managers of schools towards the general expenses thereof. They are thus paid—

When 50 children claim the grant, The grant is -	For Boys 6*s.* each	Girls 5*s.* each
Above 50 and under 100 - -	„ 5*s.* each	„ 4*s.* each
Above 100 - -	„ 4*s.* each	„ 3*s.* each

Conditions:—Income of school from all sources must allow 14*s.* per head for boys, 12*s.* for girls, for all those children for whom grants are claimed. Attendance of those children to be 176 days, but parts of separate days may be counted towards this number, and, if the master be certificated, boys above ten years old who attend 176 half days or 88 whole days, may be reckoned. *See infrà*, "Half-time." Seven-tenths of income of school from all quarters to be applied to salaries; three-fourths of children must pass a satisfactory examination. Accounts and registers must be kept. Suitable forms of registers are published and may be obtained from the publishers named in the book schedules circulated by the Committee of Council.

Infant schools are allowed to participate in these grants.

Under a *certificated* mistress, in a mixed school, these grants are allowed at girls' rates in parishes where the population is under 600.

For one year these grants will be given to schools where the master or mistress "is not *primâ facie* incompetent." The next year the teachers must be certificated or registered.†

IX. *Half-time Attendance.*

Capitation grants are allowed for 88 days, instead of 176, to boys above ten years of age employed half-time in industrial occupation, and where a scheme is approved by the Committee of Council. This does not provide for boys who attend school only as they may happen to be spared from work, but there must be more or less of systematic arrangement for the times of their attendance.‡

X. *Night Schools.*

For an assistant master (who is not required to have been a pupil-teacher, and who may follow any other occupation during the day,) a Government grant is allowed not more than 10*l.* nor less than 5*l.*, where twenty children attend for sixty days. Fees paid by scholars must in gross equal or exceed Government grants. The night school must be under the same management as a day school under inspection.

Teachers must be above twenty and under forty years of age, and must produce certificates of character and aptitude for teaching.§

Where a night school is added to a day school, and both are managed by the same teacher, an additional number of assistants (*quondam* pupil-teachers) is allowed. A schoolmaster, however, who has to instruct pupil-teachers out of school hours, is not allowed to be charged with a night school also, unless he can be relieved either from the morning or afternoon school. Such relief may be afforded either by an assistant (*quondam* pupil-teacher) or by a second master (*the Committee of Council would pay an augmentation grant on the usual terms to such a second master if he were certificated*) or, in day schools attended by less than 100 scholars, by taking the younger boys during the afternoons into the girls' school, and leaving to the master the elder boys only, as an industrial class.

XI. *Industrial Schools.*

The Committee of Council make grants towards the erection of permanent buildings for these schools. Their Lordships also make grants towards establishing,

* Minute of 20 August 1853, sec. 13.
† Minute of 2 April 1853, and Explanatory Circular of 20 August 1853.
‡ Minute of 29 April 1854; and Circular of August 1855 (Minutes of 1855-6, p. 47).
§ See Minute of 1 March 1855.

in connexion with existing schools, field gardens and workshops for boys, and kitchens, washhouses and bakehouses for girls. Their grants are awarded,—

Firstly, towards paying the rent not exceeding one half of it.

Secondly, towards purchasing tools in the first year, not exceeding one-third of the total cost.

Thirdly, towards remunerating the industrial superintendent. If the superintendent be the schoolmaster, he may receive 2*s.* 6*d.* per industrial scholar. If the managers retain special instructors in industry, they (the managers) are allowed 5*s.* per industrial scholar towards the salaries.

XII. *Book-Grants.*

Grants of books and maps are made by the Committee of Council from a very extensive catalogue, and on terms to reduce their cost to the school to little more than forty per cent. on the retail price. No applications entertained for less than 3*l.* of books, &c.*

XIII. *Training for Teachers.*

Pupil-teachers, on the completion of their apprenticeship, are admitted into training colleges, as Queen's scholars, by a competitive examination.

The Committee of Council, grant, towards the college expenses of each Queen's scholar, 23*l.* per annum for males, and 17*l.* for females, and in aid of their personal expenses, to the young persons themselves :— †

First Year -	- Males -	- 4*l.*	Second year -	- Males -	- 6*l.*
„ -	- Females	- 3*l.*	„ -	- Females	- 4*l.*

Pupil-teachers who at the end of their apprenticeship serve for three years as assistants in schools under inspection may obtain Queen's scholarships without competing for them. So also may certificated masters who have not been trained and are anxious in this way to improve themselves.

Any person ‡ upwards of eighteen years old may be presented by the managers of a training college as a competitor for a Queen's scholarship. Only a limited number of admissions (ten per cent.) are given for competitors who have not been pupil-teachers. The privilege, however, is very important to untrained and uncertificated teachers, who have thus the means of bringing themselves up to the improved standard of their profession.

Further grants are made for the support of training colleges in proportion to the success with which the students pass their annual examinations before Her Majesty's Inspector.

XIV. *Pensions.*

Retiring pensions are granted on certain conditions to any schoolmaster or schoolmistress who has served in an elementary school for not less than fifteen years, (during seven at least of which the school must have been under inspection,) and who by age or infirmity is rendered incapable of continuing to teach a school efficiently.

---

* Minute of 18 December 1847, Explanatory Circular, and revised Schedules.

† Minute of 14 July 1855.

‡ In sound health and not maimed nor deformed.

General Report, *for the Year* 1856, *by Her Majesty's Inspector of Schools, the* Rev. J. J. Blandford, B.A., *on the* Church of England Schools *inspected in the Counties of* Northampton, Rutland, Lincoln, Nottingham, Leicester, *and* Derby.

My Lords,

Annual inspection.

I have the honor to present to your Lordships a report on the schools inspected by myself and my colleague, the Rev. H. B. Barry, between 31 August 1855 and 31 August 1856. With the exception of a few schools in Derbyshire that have been inspected subsequently to the latter date, all those on my list have been visited in the course of the year; and reports have been made on them. I trust that I and my colleague together may be able to report annually on the state of each school liable to inspection in this district. The expectation of a regular visit, and the certainty of a report being made on a school, produce undoubtedly a healthy stimulus to all connected with it; the result of which is seen in the improvements effected, and the exercise on the part of the managers of a more careful personal superintendence. The latter point (the necessity of watchfulness over a school by the managers, particularly by the clergyman) cannot be brought too prominently forward. In ordinary cases no school thrives without this superintendence, and the absence of it,—especially where there are pupil-teachers,—is liable to be attended with such disastrous consequences that no managers, under a due sense of their responsibility, would venture to neglect so plain a duty, or run the risk of bringing an amount of evil upon a school that no subsequent vigilance could undo. I am induced, for two reasons, to allude thus early to the necessity of this superintendence being exercised; first, from a very painful recollection of circumstances that occurred in a school in my district, recently brought under your Lordships' special notice, and which, humanly speaking, might have been prevented, had even ordinary vigilance been applied by those whose duty it was to apply it; and, secondly, from the impatience sometimes exhibited by trained masters and mistresses, when the clergyman, in the discharge of his pastoral duty, exercises that proper supervision and control over the teacher and the school so essential to the welfare of both. It is superfluous to comment upon the good effects likely to result from the judicious visits of the clergyman to his school; any teacher, therefore, who looks upon such supervision as an interference, or who is disposed to treat lightly the suggestions which come from that quarter, because they do not coincide with his own

Necessity of supervision being exercised over schools by managers.

opinions, forms a very inadequate conception of his true position, and of the duties of his minister. The necessity of this supervision is augmented tenfold when pupil-teachers are employed in a school. I believe that the clergy do undoubtedly exercise a general supervision over the apprentices, but there is a deficiency in that close and personal intercourse which ought to exist between them.

Number of schools under inspection.

The number of schools under inspection in the East Midland district, in 1847, was 217; in 1854, 386; at the time of writing this report, there are 412:—

Derbyshire	119
Leicestershire	74
Lincolnshire	97
Northamptonshire	57
Nottinghamshire	52
Rutlandshire	13
Total number	412

Number under inspection, small in proportion to area and population of district.

When the population and area* of this district are taken into consideration, the number of schools under inspection, though considerably increased since 1847, is small, and it is to be regretted that the managers do not try to avail themselves to a greater extent of the liberal annual assistance which may be obtained from the educational grant. Whatever difference of opinion may exist as to the agency by which the inspection of schools should be carried on, there can be none as to the good that is effected by a periodical examination, the result of which is made public. By means of a well organized and efficient system of inspection, deserving teachers are encouraged to persevere, and are stimulated to further exertions; whilst it acts as a check upon those who are disposed to be remiss and idle.

Reasons why inspection is not more frequently invited.

I believe that, amongst others, the following reasons may be assigned why inspection is not invited to a greater extent, and why the pecuniary assistance that may be obtained under your Lordships' Minutes is not more generally accepted. In the first place, there is still great ignorance, or there are very vague ideas, as to the pecuniary benefits to be obtained; and, in the second place, there is a misconception as to the nature of the inspection, which is often looked upon as the first step towards putting the school under State control, and so of gradually neutralizing, if not altogether absorbing, the powers of the managers. As to the first point, ignorance of the pecuniary benefits to be obtained, I believe that a large majority of the managers of

* Area in statute acres = 4,201,944.
Population = 1,439,304.

schools not under inspection are either ignorant of the existence of the capitation grant, or deem it hopeless to try to avail themselves of this and other modes of assistance, in consequence of the supposed impossibility of raising sufficient funds for the payment of a certificated or registered teacher; that being one of the conditions upon which assistance is given towards the support of schools. Now, without being disposed to deny the difficulty that does exist in raising adequate funds, I may state, as a matter of fact, that there is a considerable number of schools where, by a little exertion, the managers might raise the extra funds required for paying the salaries of certificated teachers; and this remark applies particularly to girls' schools, for the capitation grant, in addition to the income derived from other sources, would do more than pay the higher salary required. I know several schools where that would be the case, and one in particular where the managers are actually giving 50*l.* a-year amongst three teachers (30*l.* to an untrained mistress, and 10*l.* each to two incompetent assistants) when it would be a positive gain to the funds of the school to appoint a certificated teacher, having pupil-teachers under her. Another reason why more schools are not placed under inspection appears to be a fear on the part of the managers that the placing their schools under inspection will oblige them to give up a portion of their authority, or that there will be some kind of interference by the Committee of Council on Education with the management of the schools. I need scarcely say that this is a misconception, at variance with the principle of non-interference on which your Lordships' grants have always been administered, and at variance with the experience of those who have received aid from the educational grant. But, after all, I believe that the real reason why more managers of schools do not seek to avail themselves of pecuniary assistance from the State is not so much a fear of State interference as a feeling of indifference, and a disinclination to give themselves any trouble in the matter, combined with a strong dislike to the publicity that would be given to the condition of their schools. "He does very well for us, and we will have nothing to do with these new-fangled schemes of education," is still the reply frequently made by managers when remonstrated with for retaining an incompetent teacher; and I well remember the remark made by the trustees of a school respecting their schoolmaster:—"He is very imcompetent, but we like him, for he gives us no trouble, and is very civil;"—that is, he duly touched his hat when he met any of the managers, and never troubled them to get books or maps, or black-boards, or any other apparatus necessary for the efficient carrying on of the school. Persons who dislike trouble, and who are

well satisfied to let matters remain as they are, will certainly not look with any degree of favour upon a system of inspection whose chief element of strength lies in the publicity which it gives to the condition of the schools. Managers do not like to be told, however courteously, that their schools are in bad order; that the ventilation and offices must be improved; that books must be purchased; and competent teachers appointed; in order to obtain assistance from the public funds. It is easy, therefore, to understand why the reforms thus required, the trouble attendant thereon, and the public report made of the school, are equally disliked; and that, in order to avoid them, shelter is taken under the plea of a disinclination to State interference.

I have next to bring under your Lordships' notice the character of the instruction given in these schools.

Religious instruction

It is now well understood by all who are candidates for certificates, that, however satisfactory their attainments may be in other respects, they cannot be successful unless they possess a good knowledge of Holy Scripture, and, in Church of England training institutions, of the Articles, Liturgy, and Catechism; and it is a matter of fact that those candidates who show a satisfactory knowledge of the foregoing subjects do, in the majority of cases, acquit themselves creditably in others, and seldom fail in passing the examination. It is very gratifying to find that the importance attached to a good knowledge of Holy Scripture, at the Christmas examinations for certificates, produces good fruit afterwards, in the prominence that is given by the students to religious teaching when they take charge of their schools; and I may further observe, that, when the religious knowledge exhibited by a class of children is good, I expect to find ordinarily a corresponding progress in other branches of instruction.

Reading.

The reading is not good; an unnecessary length of time is occupied in teaching the mere rudiments, and my impression is, that, with one or two exceptions, the students in training colleges are not adequately instructed in the method of teaching reading, either in regard to the mechanical details, or in regard to those that relate to the reading with expression. Whether the Irish children have a greater aptitude for learning to read, or whether their teachers possess greater skill than others in instructing them, I cannot say, but the following extracts from the Teachers' Manual for Infant Schools, by Mr. Thomas Urry Young, sanctioned by the Commissioners of National Education in Ireland, show how much less time is spent with them than with us, in teaching children to read:—

"In the model school there were in the alphabet (the sixth) class, at the commencement of 1851, 73 pupils, who were under the charge of a paid

monitress; during the year there were admitted into the class 309 fresh pupils; at the close of the year there were remaining 43. The time given to reading was three quarters of an hour each day for five days in the week; the average number of reading days each child attended, previously to being drafted into the fifth class (or until well acquainted with the alphabet) were 34, giving 25½ hours as the time actually spent by each child in learning the alphabet."

When drafted into the fifth class, sentences similar to these are read :—*Try to do good; It is a wet day; Men go on the sea.* Mr. Young then states, that,—

"At the commencement of the year, there were in the fifth class 70 pupils; 252 more were admitted during the year, and 95 remained at its close; the average time for each pupil in the class was 45 days, giving 32¼ hours as the time spent in reading in this class."*

Writing.

The writing on slates is generally very fair, but a comparison of the copybooks exhibited with such pride by the former generation of schoolmasters with those of modern date would certainly not be to the advantage of the latter. Proper attention is not paid to the manner in which the pencil is held, when the children are in the lower classes. The usual mode of instructing the younger children in writing is for the teacher to set a copy on the black-board; he then goes away to attend another class, leaving the young scribes to follow their own devices in the way in which they hold their pencils and form their letters; the consequence is that bad habits are formed, which are not so easily overcome. I say nothing of the righteous indignation exhibited, or of the speedy punishment that followed the perpetration of blots, under the old race of teachers; but, undoubtedly, one element of the success that attended their efforts, in teaching writing, was the care that they took in making their pupils pay strict attention to what, in the language of the craft, was called *the terminations, i. e.*, they impressed upon the minds of their scholars (not unfrequently through the medium of the cane) this rule, that, each letter and word formed in every line of a page, in the copybook, must occupy the same space in the line as that which they occupy in the copy itself; now, when this is done, the result is regularity in the ending or *termination* of the same words in each successive line in the page, so that a straight line drawn through any letter in the top line of the copybook would pass through the corresponding letters in all the lines below. It is no easy matter to write a copy with this regularity; the process requires an observing eye, a light, and flexible hand, and, above all, slow writing; but these three points, especially the last, are precisely those that are involved in the rules for teaching good writing, and it is to the neglect

* Page 134—36.

of them, and to the not writing from a greater number of large-hand before the pupil is allowed to write from small-hand copies, that the degeneracy of the writing of the present day is in no slight degree to be attributed. It is to be regretted that more attention is not paid to this subject; there are few things which tend to make a school more popular than for the teacher to have the reputation of sending out good writers. The parents may not be very competent judges of their children's progress in physical geography, or of their knowledge of prefixes and affixes, but they can duly appreciate good writing, in a clean and unblotted copybook.

Spelling. Upon the whole I find the spelling improved. One certain way to effect this improvement is for the teachers to practise the children twice a week in writing from dictation, on *paper* as well as on slates. Half a sheet of foolscap is sufficient for each lesson; the other side may be advantageously used for the working of sums. I believe that there is no exercise better calculated than this is to improve a class in spelling, and to promote accuracy in arithmetic. In writing from dictation, or in working sums on slates, a child may be careless and inattentive from the very facility with which mistakes can be rectified, by rubbing out the mis-spelt word or the incorrect figure; but this cannot be done on paper, and the effect upon the child is to make him reflect and spell the word mentally, before it is written upon the paper; anybody who has given a lesson in dictation to a class, and made them perform the exercise on paper, must have observed indications of this reflection in their countenances whilst they were writing. It may be said, on the other hand, that children who can write very fairly from dictation, and work their sums with tolerable accuracy on slates, will make all kinds of mistakes when required to do the same on paper, but these mistakes arise from the novelty of the exercise, and the want of sufficient practice, and are a strong argument in favour of paper work; skill in arithmetic, and the power of spelling correctly, will be tested in after life, not on slates, but, on paper, by the quickness and accuracy with which the pen can be used in writing letters, in making out bills, and posting accounts in the ledger

Arithmetic. The attainments in arithmetic, and the general progress of the schools in this subject, are more satisfactory than they were. Formerly it happened frequently that a first-class would be working the higher rules, whilst the second and third did not know the multiplication table, or were unable to add correctly an easy sum in addition. It is true that, in many schools, the attainments in arithmetic are not so high as they used to be, but the general progress throughout the schools is superior to what it was, in consequence of the lower classes being better and more carefully taught.

Other subjects of instruction.

Of the remaining subjects in which instruction is ordinarily given in elementary schools, viz., geography, English history, and grammar, the former is taught intelligently and with good effect, but the progress made in the two last-mentioned subjects is scarcely proportionate to the time devoted to them.

Preparation of lessons at home.

I have already adverted to writing, to the teaching of which the masters of the last generation paid more attention, and therefore were more successful, than those of the present day; but there is another particular in which they would do well to take a leaf out of the book of their predecessors; I allude to the practice of requiring their scholars to prepare home-lessons at night to be said the following morning. This practice, once so generally adopted, but now either fallen into disuse or allowed to be performed in such a slovenly and irregular manner as to defeat its object, is at all times a most valuable adjunct to the instruction that is given in any school, but it becomes especially important when the early age at which the children are removed from elementary schools is taken into account. The additional information that would be gained, and the longer time that the children would be under instruction, are not the only nor the greatest benefits connected with a system which provides for the preparation of lessons out of school hours; the time that must necessarily be spent at home, in the preparation of these lessons, may be the means of forming domestic habits, and of inducing the children, as they grow older, to prefer spending their evenings quietly with their parents, instead of disreputably lounging about in the streets,—a custom so common to young persons of both sexes, and which proves the ruin of numbers. As there would be no teacher at hand to solve difficulties that might arise in these lessons, a boy would find that he must learn to depend in some measure upon his own resources; and thus habits of self-dependence, and a resolution to overcome difficulties without seeking the aid of others, might be formed. These advantages, combined with the probability of inducing the parents to take greater interest in their children's school-work, are sufficient recommendations to the adoption of a well considered system of home-lessons. To carry out a system of this kind involves the purchase of books, by the children,—for it would not be expedient to allow them to take home those belonging to the school; but, as liberal grants are made by your Lordships towards the purchase of books, there need be no difficulty on account of the extra expense. In any fairly-conducted school, the teacher ought to have no difficulty ordinarily in persuading the children composing the first-class to buy a reading-book and a *dictionary*. It is somewhat singular that the latter book is one which a teacher seldom, if ever, recommends his pupils to buy, yet it is obviously one of the most necessary and

useful books that they could possess. If a child once acquires the habit of using a dictionary, he will learn more in one month than another of equal abilities would learn in three months without one. A useful home-lesson might be given twice a week to the first-class, by the teacher selecting some page in their reading book, and requiring them to find out in their dictionaries every word with the meaning of which they were unacquainted; the meaning should then be committed to memory, and the next morning the class should be required to write down the meaning of the words, and the parts of speech to which they severally belong. A lesson of this kind includes an exercise in spelling, grammar, and writing. It has moreover this advantage, that, very little time need be occupied the next morning in testing the knowledge of the class in what they have had to prepare. The lessons ought to be carefully heard in the morning, immediately after the Bible-lesson; but the children will become careless, in the preparation of them, unless they are made to understand that their home-lessons are considered by their teachers as important parts of the schoolwork, on which as much care is to be bestowed as upon the exercises prepared within the walls of the school-room.

Capitation grant.

In previous reports I have alluded to the difficulty experienced in raising funds towards paying the salaries of certificated teachers. This difficulty has been diminished by the Minute of 2 April 1853 being extended to all schools (otherwise eligible for the grant), whatever the amount of the population may be amongst which they are situated. I subjoin a list of schools in my district that have received the capitation grant between 31 August 1855 to 31 August 1856. With the exception of four in Derby and one in Chesterfield, these schools are situated in the agricultural districts.

List of Schools in Counties of Northampton, Rutland, Lincoln, Nottingham, Leicester, and Derby, which have received Capitation Grants, with Amount of Grant, Number of Children on whom such Grants have been claimed, and Average Attendance, from 31 August 1855 to 31 August 1856.

Twenty-seven pupil-teachers (14 boys and 13 girls) completed their apprenticeship in the course of the year. Thirty (17 boys, 13 girls) were successful candidates for Queen's scholarships.*

Iron and Coal Masters' Association for awarding annual prizes among schools in mining districts of Derbyshire, Leicestershire, and Nottinghamshire.

Your Lordships have already been informed by Mr. Tremenheere, that, after communicating with the principal employers of mining labour in Derbyshire, Leicestershire, and Nottinghamshire, on the subject of associations for offering prizes in schools, he attended a meeting of the Coal Masters' Association for those three counties, at Derby, where unanimous resolutions were passed, adopting, with some modifications, the plan of the South Wales Associations, forming a committee, and voting 100*l.* for carrying the prize-scheme into effect. I have further to report that, in accordance with instructions received from your Lordships, I communicated with Mr. Tremenheere, and attended meetings of the committee at Derby on the 25th of November 1856 and on the 7th of January 1857. At the beginning of the year (1857) the following Circular was addressed by the Secretary to the clergy and the teachers of the district :—

TO SCHOOLMASTERS AND SCHOOLMISTRESSES.

1. THE attention of schoolmasters and schoolmistresses is called to the subjoined Rules and Regulations of the Iron and Coal Masters' Association, for awarding prizes in elementary schools for the working classes.

* Vide List in Appendix B. Three of the successful candidates had completed their apprenticeships in previous years, but had not competed for Queen's scholarships.

2. Schoolmasters and schoolmistresses, who intend to send candidates to compete for these prizes, are requested to comply carefully with the rules laid down in the conditions of competition, and with the directions of § B.

3. It will be observed, that the competition is open to schools of every denomination, whether under Government inspection or not, provided they are approved of by some member of the association.

4. The object of this notice is, that schoolmasters and schoolmistresses may prepare as many candidates as possible, to take part in the competition.

ASSOCIATION for awarding ANNUAL PRIZES among the SCHOOLS of the MINING DISTRICTS of Derbyshire, Nottinghamshire, and Leicestershire.

Hon. Secretary and Treasurer.—Mr. George Pickering, Eastwood, Nottingham.

The object of this Association is to induce parents to keep their children at school longer, and more regularly, than is at present the custom; and to hold out to the children themselves an additional motive to diligence and good conduct.

Conditions of Competition.

1. Candidates to be boys or girls (not pupil-teachers) who have attended, for a period of at least two years, an elementary school for the working classes, approved of by some member of the Association.

2. They must be at least ten years of age.

3. They will be required to produce a certificate, from their teacher, that they have attended the day-school at least 176 days during the twelve months ending the 1st June preceding the examination.

4. Certificates will also be required of good character, and of satisfactory progress in religious knowledge, signed by their teacher, and countersigned by their clergyman or minister.

5. All candidates will be expected to read tolerably: to write a fair round hand; to spell simple words correctly from dictation; and, in arithmetic, to have a fair knowledge of the first four rules, simple and compound.

Those competing for the higher prizes will be examined in decimals and the higher rules of arithmetic, and in grammar and geography.

Schoolmasters and schoolmistresses are reminded, that as the principal object of the Association is to improve the education of children whose parents are connected with the Collieries and Iron Works, any children whose parents belong to other occupations will be expected to answer more difficult questions than those submitted to the first-named class of children.

Girls will be expected to possess skill in needlework, and should bring with them the requisite materials for cutting out and making some article of clothing.

§ A. The above rules have been drawn up with a special view to the first year's examination. In subsequent years it may be judged expedient to modify them.

§ B. Managers of schools, who wish to send candidates to take part in the above competition, must forward, on or before the first day of June next, a list of such candidates, specifying the age of each, together with a certificate that the school is approved of by some member of the Association, to the Rev. J. J. Blandford, or M. Arnold, Esq., Her Majesty's Inspectors of Schools, Privy Council Office, London.

§ C. The examinations for the year 1857 will be held at Derby, in the month of July next.

The day and hour of the examination will be duly announced by public advertisement.

§ D. Prizes, not exceeding on the whole 100*l.*, of 3*l.*, 2*l.*, and 1*l.* each, will be given to the successful candidates according to their proficiency, as shown by the examinations.

Smaller prizes in addition to the above may also be given on the recommendation of the inspectors.

The name of each successful candidate will be registered in a book, to be provided by the Association, to which reference may always be made.

A handsomely printed card will be given to each successful candidate, certifying that he has gained a prize. The prizes and the cards will be delivered to the successful candidates at a public meeting, which will be held after each annual examination.

These cards will form a lasting certificate of diligence and good conduct at school, and will be not only a just object of satisfaction to the possessors of them and to their friends, but a valuable testimonial to any employer.

In some parts of the country, the employers of juvenile labour have signified their intention of giving a preference to those children who are possessed of these cards, signed by Her Majesty inspectors.

The expenses of the successful candidates in attending the examination and the meeting will be defrayed by the Association, together with such other casual charges as the inspectors may recommend.

§ E. In order to encourage boys to keep up and extend their knowledge after leaving school, to show them the value of good character, and to teach them habits of economy, it is further proposed to offer, in subsequent years, prizes of 5*l.* each, to candidates who pass a satisfactory examination in some one or two books, which may be selected from a list of works to be hereafter advertised, and who can produce certificates, signed by their minister, and also by some member of the Association,—

a. That they have gained one of the preceding prizes.

b. That they are employed in connexion with the works of some member of the Association.

c. That their character is good.

This prize will only be awarded once to the same individual.

The sum will be invested in the Savings' Bank, in the name of the successful candidate, and at the expiration of two years from its being awarded, the Savings' Bank book, containing the statement of the original sum and the interest, will be given over to him.

If any boy who has become entitled to this sum dies before the two years are completed, the money will at once be given over to his parents, or to his nearest relative.

A printed card will also be given with this prize.

It would be premature to express any decided opinion as to the probability of the success of the scheme; but, judging from what has been done of a similar character in other counties, I cannot help feeling sanguine as to its ultimate beneficial results; and I need scarcely add that no effort shall be wanting on my part to further the views and carry out the intentions of the association.

I have the honor to be, &c.

J. J. BLANDFORD.

To the Right Honorable
The Lords of the Committee of Council on Education.

General Report, *for the Year* 1856, *by Her Majesty's Inspector of Schools, the* Rev. W. H. Brookfield, M.A., *on the* Church of England Schools *inspected in the Counties of* Surrey, Sussex, *and* Kent.

My Lords,

The employment of my time during the year ended on the 30th of September 1856 has been as follows :—

	No. of days.
Inspecting elementary schools	145
„ normal colleges	8
Holding examinations for pupil-teachers	26
„ „ for certificates of merit	9
„ „ „ registration	3
Revising papers of pupil-teacher examinations	26
„ „ candidates for certificates	14
Travelling	4
General report, &c.	26
Correspondence, conferences, &c.	40
Public holidays	7
Illness	5
Sundays	52
	365 days.

Within this period I have examined 192 schools under separate teachers, the comparative efficiency of which may be estimated as follows :—

Good schools	53
Fair	92
Indifferent	47
	192

The estimate formed by my colleague, the Rev. R. L. Koe, of 303 schools under separate teachers examined by himself, and measured by his own independent standard, exhibits a result not very widely different. What difference there is, and his somewhat (but not much) larger proportion of inferior schools, will be pretty accurately accounted for by the circumstance of his having visited a larger number than myself of the smaller and more obscure schools, in poor and remote neighbourhoods, which had not been previously visited, or brought under the the operation of the Minutes of the Committee of Council. Mr. Koe's comparative estimate of 303 schools visited by himself is as follows :—

Good schools	58
Fair	174
Indifferent	71
	303

The two results combined give for the South-eastern district :—

Good schools - - -	111
Fair - - -	266
Indifferent - - -	118
Total - -	495

It is, perhaps, hardly to be expected that any just estimate, on a large scale, of human institutions or the results of human enterprise should be much more favourable than that which exhibits about an equal number of good and of indifferent, and a number doubling either of satisfactorily fair. I think, however, that the standard of appraisal with reference to elementary schools might be considerably raised, without disturbing these proportions, if the art of teaching and of managing a school occupied a more prominent position than it has hitherto been found practicable really to enforce, amongst the various accomplishments exacted as indispensable in a teacher. And if I have hitherto, or up to a recent period, found reason to believe that this art of teaching has neither been cultivated nor insisted on proportionately to attainment in the subjects to be taught, I persuade myself that I have lately seen indications, not to be mistaken, of a more equitable adjustment of the balance, from which the best results may be anticipated.

With these few observations, and inviting your Lordships' attention to my Tabulated Reports for the past year, already published, containing remarks on each particular school visited, I am compelled at present to content myself. The recent removal of the limitations previously existing with regard to capitation grants, and the great annual increase in the number of certificated teachers claiming augmentation of salary, have combined to bring in so large an accession of schools demanding inspection in my district, that, without additional assistance, my colleague and myself can no longer meet the press of these engagements. The number of schools open to inspection in Surrey, Sussex, Kent, and the Channel Islands is at this moment upwards of 520,—most of them consisting of two or three departments (boys, girls, and infants) under separate teachers ; and the number is increasing daily. The number of certificated teachers, male and female, is upwards of 300, and of pupil-teachers 600. For two persons to do justice to so many and increasing demands upon their time has long been difficult, and by the summer of this year will have become impossible. I trust, therefore, that I may with confidence appeal to your Lordships' for the assignment to my district of

an additional Assistant Inspector, and that I may be able next year to report the visible advantages resulting from his co-operation.

I have the honor to be, &c.

W. H. BROOKFIELD.

To the Right Honorable
The Lords of the Committee of Council on Education.

APPENDIX.

GENERAL REPORT, *for the Year* 1856, *by Her Majesty's Inspector of Schools, the* Rev. W. J. KENNEDY, M.A., &c., *on the* CHURCH OF ENGLAND SCHOOLS *inspected in the County of* LANCASTER, *and in the* ISLE OF MAN.

MY LORDS, Preston, January 1857.

I HAVE the honor to lay before you my report for the year 1856.

Introduction. The principal statistical results concerning the several schools examined during the year by my colleague, the Rev. W. Birley, and myself, are exhibited in the usual tabular form which is now printed separately for circulation in our district. Though these results are briefly and somewhat technically expressed, yet I believe that they are now perfectly understood by those interested in the several schools so reported on. The public at large, however, are more interested in learning the general results and impressions left on the mind of an Inspector by his year's labours among schools and among those who are most zealous and most concerned in the business of national education.

Capitation fees, The fact of greatest educational importance to all of us in Lancashire during the past year is, unquestionably, that new Minute of your Lordships, by which the capitation fees have been extended to all schools, instead of being limited as at first to schools in unincorporated towns, and in districts where the population did not exceed five thousand. The limitation placed in the first instance upon this kind of grant caused it to be of comparatively little use in Lancashire, where the population is mostly grouped in large towns and districts. Since the limitation was withdrawn, however, its exceeding usefulness is beginning to make itself extensively felt in Lancashire. These capitation fees are the first important attempt of your Lordships to increase by a grant the funds of a school, without at the same time requiring some special outlay or improvements which should absorb the grant. Now, for the first time, additional annual funds from a public source are put into the hands of school managers, which they may spend on undefined and general school purposes. The need of such funds has been my incessant cry for many years. The kind of school to which, above all others, this grant will be useful is that in which the managers have hitherto felt themselves unable, from want of funds, to engage a certificated and competent teacher, but will now venture to do so in reliance on

now extended to corporate towns and populous places;

now beginning to be of very great use in Lancashire;

they will enable managers to

engage certificated teachers.

the capitation fees. The advantage to education which we may fairly hope for in this one respect alone, as resulting from the capitation fees, is immense. From year to year I have found, and I have stated, that our first great want was adequate and permanent annual funds; and the main thing which those funds were needed for was, to enable school managers to engage good teachers. The means of doing this your Lordships have now at length put into their hands. If a school has a certificated teacher, it may almost rely on obtaining capitation fees, and these fees will eventually more than make up the larger salary which it will be necessary to give such a teacher, to say nothing of all the other advantages in the shape of pupil-teachers, &c., which the having a certificated teacher generally confers. I earnestly hope that those managers who have hitherto been afraid to offer the stipends which competent certificated teachers reasonably expect will consider this point, and will engage such teachers, in reliance on the capitation grant at the end of the year. Managers will naturally be desirous of learning about what proportion of children in attendance at a school come with sufficient regularity to obtain the fees, in order that they may calculate what sum they may expect to accrue to their own school. I have made some calculations on this subject from the schools in my district which have received the capitation fees, and I find that at present the proportion of children for whom the grant is claimed is, *upon an average,* rather under one-third of the children in ordinary attendence. Thus, out of 120 children who are in ordinary attendance at a school, rather less than 40 may be expected to attend for at least 176 whole days in the year, and for them the capitation fees may be expected if the teacher is certificated. It cannot be doubted, however, but that the proportion of children who attend for 176 whole days will increase, so that we may soon expect to find that, on an average, half the scholars in attendance will complete the requisite time; for the capitation grant has this indirect advantage, (as doubtless your Lordships foresaw,) that it becomes the peculiar interest of managers and teachers to look after the attendance of the children; and, moreover, we may reasonably hope that the parents themselves will feel an additional stimulus to send their children with regularity when they know that the school will derive a pecuniary advantage from the regularity of their children's attendance. As far as the mere supply of funds, we may hope that ere very long the capitation fees will do for schools nearly all that would be done by those local school rates, which I have advocated, in all my reports, though we cannot expect that the capitation grants will inspire that local interest in the work of national education which would pro-

Proportion of children who attend school for 176 whole days per year about one-third of scholars on an average.

Proportion will be increased through capitation fees.

bably be infused into persons if they were annually rated for its support. This absence of real interest in the education of the people appears to me to be one of the most real and important facts of our time, and yet one which is not duly perceived. The truth, as I believe, is, that comparatively few persons in Lancashire feel any real concern to see the people at large educated. A few persons make a good deal of noise on the subject; and a still fewer number carry on the work liberally and zealously though without talk and noise;* but the mass of persons are still hostile, or at best indifferent on the matter. *A public feeling for education has yet to be created.* In saying this, however, I am bound in truth to except one class of persons from the assertion, I mean the clergy. Ever since the year 1843 I have had a most extensive insight into the educational doings of the clergy, and I cannot but attribute the main educational work which has been effected in England—and that is not slight in amount—to their zeal and their labour; aided, indeed, by the more wise and religiously disposed lay members of their flocks but still essentially *their* work; theirs in scheme and design, theirs in wearisome collection of funds, theirs in careful daily supervision, and, to some extent, in actual teaching. As far as my present work of inspecting schools is concerned, I am bound to add that I owe a debt of gratitude to the clergy of my district, which I feel most sensibly. I have received at all times, and in all shapes, the most frank, generous, and hearty assistance and co-operation from them all. I should in vain attempt to express all I owe to them. So far as the inspection of schools may have been useful in Lancashire, it has been mainly owing to the zeal and kindness of the clergy. The clergy, then, I say, have played and are still playing their part in education, and a most active, laborious, useful, and self-denying part it has been. But still, I believe that in education, as in all religious and ecclesiastical affairs, the work can never be complete or wholly sound and thriving unless the laity also take an active and prominent part in it. I wish I could see any symptom that the laity were generally interested in the matter. I have spoken of the schools whose efficiency and almost whose existence will be dependent on the capitation fees. But there is another class of schools, namely, those in which the capitation fees will rather be a luxury than an absolute necessity. I trust that in these cases the stream of voluntary

Great body of laity in Lancashire not really interested in national education.

Clergy have been and are chief promoters of national education.

* I am happy to say that I could name several such good and wise men among the laity of Lancashire. The work of one gentleman in particular is beyond all human praise for what he is doing—I mean Herbert Birley, Esq., of Manchester, with whose generous educational work I constantly meet in that city. And yet it is probable that very few persons indeed have ever heard his name in connexion with education there. Mr. Herbert Birley works and gives, while others talk.

contributions will not be checked; for, even in the very best and richest schools in my district there remain various modes of outlay, in which their efficiency and value may be increased.

Mode suggested in which managers may often usefully employ part of capitation fees.

One mode I will call attention to, which may often be adopted with advantage; I mean the giving gratuities or exhibitions to deserving boys and girls, to enable them to remain at school, especially when they display an aptitude for the duties of pupil-teachers. I very frequently find that the scholars who show most proficiency and general fitness for the duties of an apprentice in a school are too young by a year or two for the office; and then, when I visit the school next year, these scholars have been taken away to work. There is no more general complaint among Lancashire schools than this, especially in the case of boys. The boys who do remain at school till they are thirteen years old are very often either not fit to be apprentices, or at least are not the most eligible; the eligible boys having been compelled to go to some remunerative labour. Accordingly, I incline to think that, in many cases, the capitation fees cannot be better expended in Lancashire than in inducing parents to keep their children at school by pecuniary gratuities. At present I hardly know of a single school where the funds, exclusive of capitation fees, would enable the managers to do this. The following quotation from a letter, which is only one out of a vast number of instances of the same kind in my district, illustrates the want to which I refer:—

"Since your visit last year to our National School at Lane Head, we have opened a new school at Haggate, the most populous part of the district. This school is now attended by 140 children, a sufficient proof that the school was needed and is valued. As it is impossible that one master can attend to so many children, the committee are anxious that pupil-teachers should be apprenticed to the master as soon as possible. There are three boys who are likely to remain at the school till you come in August, and would gladly avail themselves of the chance of becoming pupil-teachers, if they were approved of by Her Majesty's Inspector; but all of them will be under thirteen years of age, though above twelve. Would it be possible to apprentice them when you visit the school? *If we do not secure them now, the probability is that they will go to work and we shall lose them.* Very few deserving and competent boys are to be found in this neighbourhood likely to become pupil-teachers; their parents send them to the mills for full time as soon as they can, viz., at thirteen, and they can earn more there than they could in any other way."

In the case of schools where the capitation fees are not a necessity, can they be better employed than in retaining the services of deserving boys who would otherwise be lost to the schools in the way described in the foregoing extract? In the case of poor schools, I earnestly wish that your Lordships would empower the Inspectors to give sums, not exceeding 5*l.*, to retain such boys for the office of apprentices.

School registers.

A decided improvement in the nature of the registers kept in schools, and in the mode of keeping them, has been incident

upon the capitation fees. The registers most approved in Lancashire are the class-registers recommended by your Lordships, as they are got up and published by James Martin, 9 Lisson Grove, St. Marylebone, London. I am glad to see that this publisher, amongst others, has his class-register on your Lordships' list of books. But in some schools, where the classes are very large, and especially where there are many "half-timers," a very long list of names is required for each class, extending, sometimes, to as many as 50 or even 60 names. For such cases the only suitable class-registers which I have seen are those got up by Mr. Wrigley, the excellent master of the parish church school at Rochdale, and through whom, I daresay, they could be procured by those factory schools where the classes are of the large nature I speak of. I would urgently recommend the teachers of all those schools, where the old pence and roll registers are still in use, to make up weekly, monthly, and quarterly, the number of days attended, and the payments made by each child, in order that they themselves, and the clergy, and school managers who have to sign the capitation schedule, may be able at the end of the year to make out that schedule easily as well as accurately. I need scarcely refer to the fact, that in the making up of the capitation schedule your Lordships rely upon the good faith and diligence of school managers and teachers, to see that the list is strictly accurate. I feel confident that no clergyman or other school manager will ever sign this schedule,—which is, in fact, a kind of cheque upon the Government,—without having taken some pains to verify the list.

Attendance of children at school.

The next vital question after that of school income is, how to secure the attendance of all children; and now that school managers begin to see their way better in respect to annual funds, they begin more and more to moot the inquiry, whether steps cannot be taken to enforce attendance. If it should be found expedient to put some compulsion on parents in this matter, there are obviously two ways in which it may be done, as I stated at some length in my report for 1855. One is to require, by law, a certain amount of knowledge from all young persons before they are allowed to engage in regular remunerative employment. The other is gradually to extend the Acts which regulate the employment of children in cotton and silk mills to all other employments. This latter plan is the one which finds the most favour among people in general. If any schemes of this kind are to be acted upon, however, I think that it will be essential to their success and to their fairness that they should be carried out by legal enactment, and so be universal in their operation, and carefully watched. Local and provincial associations, by which employers of labour agree among themselves not to employ those

who cannot produce certain school certificates, are, for many reasons, necessarily unfair in their operation, and also prove futile. They prove futile, because those who do not possess the required certificates can and do move to spots where the certificates or other tests are not made requisites for employment. Thus, for instance, the late lamented Lord Ellesmere laid down a rule that no child should be employed in his collieries under the age of eleven years. But this local rule proved nugatory, because the parents moved away, or sent their children to other collieries, and the benevolent rule was perforce soon abandoned. And mere local certificates and tests prove unfair; because it is ever found that employers evade their own rules of this sort, unless the evasion is punishable by law—indeed, they evade it too often even then. The half-time system of the Factory Acts has proved such a blessing because its operation was universal, and because it has been closely watched, and diligently superintended and worked by gentlemen like Mr. Leonard Horner and the late Mr. Saunders, and the other Inspectors of Factories. Any attempt to carry out such a scheme locally, and by private machinery, must result badly. I learn with regret, therefore, that the town of Birmingham and other places are proposing to carry out any scheme of this nature locally and by private machinery. Such schemes have been tried and have failed in Lancashire, and they will do so elsewhere. On this subject of the attendance of children, while admitting fully the need for obtaining a more complete and much more regular attendance of children, I must not refrain from noticing an egregious fallacy into which even those are betrayed from whom I should have expected more exact perceptions. Certain returns have tended to show that while there are about four millions of children in Great Britain who might be expected to be attending our elementary schools, two millions only, or thereabouts, were at school at the particular time when these returns were obtained. Hence, it is (illogically) argued there are two millions of children who are going without instruction. This deduction has been now repeatedly made, and people would seem to attach weight to it; but the deduction is absurd. The fact is, that, even supposing at some fixed moment, there were two millions of children not at school, it is probable, nay, certain, that a very large majority of these absentees get precisely the same amount of schooling as those who are reckoned as being at school. All alike have intervals in their school course, from three years old to thirteen years of age, during which they are not at school. A more just and reasonable deduction would be, that whereas the four millions of children might be at school ten years, from three to thirteen years of age, they did not attend upon an average for more than half that time.

With a view to elicit some data on this subject, I should be much obliged to all the teachers in my district if they would kindly obtain for me the following information from all the children of their two first classes, or where the children cannot give the information, from their parents :—

1. Age of scholar.
2. At what age did the child begin to go to school?
3. How many months altogether has the child been at school in its life?
4. At how many distinctly different periods was it at school?
5. Average attendance each period.

Religious or secular education for youthful poor?

Another question which specially engages attention in my district is whether the present religious and denominational system of education should not be superseded by what is called the "secular" system. I am happy to say that even in Lancashire the practical educationists, and, indeed, a decided majority of influential persons of all descriptions continue clearly in favour of prosecuting and developing the present religious system of education. This is certainly true of Church of England people, and of the Wesleyan body ; and I believe it to be true of the Roman Catholics. But these form the main population of Lancashire. The educationists on the religious system are as fully alive to the present shortcomings of education as any persons ; and they are at least as anxious as any persons to see education extended as widely and penetrating as deeply, among our population, as possible. They too have been the great promoters of purely secular learning ; giving it as far as practicable without stint and without limit ; seeking to give the youthful poor such a standing-ground in the domain of the soul as to induce them to place their happiness in the exercise of the mental rather than of the animal faculties. But they see that the most purely secular learning (so to speak) can be best given, and is being best given, on the present religious system of schools. And people generally now begin to see that there will be little difficulty in developing the present system till there are schools for all our population, and till adequate permament funds are provided for the maintenance of the schools, whether such maintenance is assisted by capitation fees as at present, or by an education rate when the capitation fees become too large for an annual Parliamentary grant to supply. When a school is aided out of a general rate, of course no child must be obliged to learn a creed to which its parent objects. But it cannot be doubted but that when a rate comes to be levied, (as sooner or later it must be), all school managers will eventually consent to exempt from the religious lessons those children whose parents shall request such exemption. This proper system, indeed, I

believe to be almost universally acted upon already in my district; and no greater concession than this, if it can be called concession, is needed to enable a rate to be levied with perfect fairness to all parties. While at the same time I trust that the managers of all our denominational schools, whether they be Church of England schools, or Roman Catholic, or Wesleyan, or Congregational, will never go further than this in relinquishing religious teaching in schools for the poor. Every parent ought to be allowed to send his child to any school, and to claim exemption for it (if he will) from the religious lessons. This is right; but to grant more than this will be fatal to the religious teaching of schools. If the managers of a school ever consent that religion shall be taught at a fixed hour only, farewell to the religion of that school. This, doubtless, will be the next insidious form under which the secularists will disguise their designs. We ought to exempt children from religious lessons; but we must never consent to limit the teacher to one time for religious teaching. And there is no honest plea for such a demand; it would be as intolerant as the forcing religious teaching where the parent was unwilling. It would not really be the question between one hour and another; but a vital question whether the master's mouth should be closed or not on religious and spiritual subjects. It is essential to the question, however, to observe that what I say of religious teaching is only fully applicable in the cases of schools for *the youthful poor*. If the parents belonged to those educated classes who had means and leisure, they might perhaps themselves suffice for the religious culture of their young children. With the poor, toiling classes this is utterly impossible; and it is difficult to have patience with those who compare the case of the higher or middle classes, in this respect, with that of the poor. There is no parallelism in the case. It is folly and worse than folly to talk of the youthful poor being instructed duly in their religion by means of "stated hours," or "Sunday schools," or by their parents at home. No! With the youthful poor the schoolmaster or no one must be their religious instructor, and his personal religion must leaven his whole work. For religious men to abandon this point at the intolerant demand of the secularists would be for the sheep to give up their dogs at the demand of the wolves. I say this *intolerant* demand of the secularists, because, to say nothing of the fact that in towns children can attend the schools of their own denominations, what more can the secularists in reason and fairness ask than that no child shall attend a religious lesson if the parent of the child requests its exemption? While it is most intolerant, towards those who feel and know what is at stake, to say that the teacher shall be

forbidden to name freely the name of Christ, even to the children of his own denomination; and this, too, in schools which have nearly all been built and hitherto maintained on a strictly religious and denominational system. The religious party have consciences as well as the secular. But it is most gratifying, and at the same time re-assuring to see that these sentiments, which I have from time to time advocated in my reports, have been very recently advocated by one of the most eminent lawyers in England, one distinguished alike by his strongly liberal sentiments, and by his personal piety, Vice-Chancellor Sir W. Page Wood—

"True liberality," says Sir W. Page Wood, "consists in allowing every man to hold and to assert his own opinion, so that it be done without offensive violence, which is a civil injury to his neighbour." "I have already referred to the blessing we enjoy in this country of religious liberty. A true liberality of sentiment has prevailed with us, founded on the soundest principles; but of this, as of every virtue, there is a counterfeit, and that counterfeit is indifference." . . . . . "This pseudo-liberalism of indifference in our own time has prompted many to deprecate all religious instruction in our schools. They have asserted that a desire to impart religious instruction is the main obstacle to education. Now, I ask what facts warrant this assertion? I will venture to assert the direct reverse, and to say that all the education of our poorer brethren has been attained solely (for some recent exceptions are too insignificant for notice), through the beneficent impulse of religion. Look at the poor schools in every town and village—who have established them? The ministers of the Gospel. Who have chiefly supported them? The National Society, the British and Foreign School Society, and the societies of various religious denominations. What have the advocates of mere secular education done, that they should boast of their principle? What prevents those who maintain it from setting up their own model schools, and teaching, as religion does, their millions? No! let every one honestly teach what he thinks right, the love of Christ constraining him, and I will venture to say that we shall find our schools increasing, as they have increased, in exact proportion to awakened religious zeal. It is the want of religion in parents, not their careful anxiety as to the form of religious truth taught in the school, that prevents our schools from being filled, as anyone with any experience in the matter will tell you." *

To these forcible and most truthful and important words of Sir W. Page Wood, I will only add the result of my own experience. I have seen schools,—I often do see schools,—where the religious knowledge, and what is more the manifestly religious, reverential, devout tone of the scholars inspires feelings of gratitude to God for allowing such a work to be wrought. The intellectual faculties are not neglected, far from it; but the spiritual faculties have been duly cultivated and trained also. What do the secularists offer that such work should be abandoned? Again, a very special objection to the scheme of the secularists lies in the formation of the teacher. If our schoolmasters and schoolmistresses are not to be teachers of religion, how different will be the point of view, and the spirit in which they are trained, and afterwards enter upon

* "Truth and its Counterfeits." A Lecture by the Hon. the Vice-Chancellor Sir W. Page Wood, Knt.—James Nisbet, London.

their work. This question, touching the teacher to be trained for secular schools, is of the gravest importance. The two subjects which interest Englishmen most are religion and politics. You cannot train a man well and yet pretend to banish these subjects, especially that which most affects his spiritual nature. It is remarkable that any persons in this country should wish to enter upon a system which may be said to have been tried and failed in France, and in which the French Government find it necessary to retrace their steps. The too-secular system of M. Guizot resulted in a race of schoolmasters who were found to be atheists and revolutionists; and the one thing which has specially distinguished the new educational code of 1851 in France is the infusion of a greater religious element into primary education, especially, perhaps, into the training of the teachers. Then, again, with what a different spirit does the teacher issue from the Training College, where he feels himself, in some sort, an apostle of Christ, of Him who said, "Suffer little children to come unto me, and forbid them not," from that which he would feel if he went forth as a mere dealer in sums and the nine parts of speech! When there is no necessity whatever for this "secular" system, when we can have (as we can) more and better schools on the present religious system—and that too without any intolerance or proselytism, which I should abhor as much as anyone—when this is the case, why compel the teacher to repress before his young and docile pupils all the light, religion, beauty, and goodness, which should be his attributes as a Christian, and which might become the attributes of his impressible scholars? Surely such a scheme was reserved for this material age to excogitate and entertain, when "cash-payment is the only nexus between man and man." In what a different spirit from our "secularists" does a great Christian philosopher and statesman, now retired from public life, speak on this matter. He writes thus:—

"There are two classes of civilisation which must not be confounded: the material and mechanical, which acts upon matter and produces wealth; and the moral, which operates on the soul, and deals with ideas, manners, heroism, and exalted virtue. We calculate the value of the first by what it produces—worldly possessions: we appreciate the latter by what it inspires—noble sentiments. The nations who are most truly civilised unite both; and to attain this end requires and demands the combined efforts of governments, legislators, political economists, moralists, writers, and poets. But if we were compelled to choose between these two conditions of civilisation, often opposed to each other, we should not hesitate to pronounce for that of the mind in preference to that of the body. We feel that there is more actual civilization in a verse of the Gospel, an axiom of philosophy, or a stanza of poetry, imprinted eternally on the memory or manners of a nation, than in the Crystal Palace of London or in an industrial exhibition of all the mechanical arts in the universe. Your workshops, wares, manufactures, and machines produce marvels of weaving and carving; but all the machinery

in the world will never create an idea or a sentiment. In mechanism is comprised the hands but not the soul of humanity. But it is not the hand which makes the man." *

In conclusion, I will only further observe, that it will not do for the friends of the present religious and denominational system of education even to appear to fold their hands and look on, as though all were done that is needed. They must make themselves thoroughly alive to the fact that adequate and permanent annual funds will have to be provided from some source. Let them, at least, believe that it may at last be decided that this source shall be an educational rate; and then let them make a final bargain with the country on this matter. For, surely it is evident that in these matters of compromise, things always drift downwards; and those who care to preserve nothing as it is, get the more, the longer the final bargain is delayed. Whereas, with those who do care to preserve religion and other such landmarks, the case becomes one of the Sibyl's books, they get a worse bargain after each delay, and yet have to conclude some bargain at last. The short but admirable Bill introduced by the Government in 1853 fell through, owing to the culpable inactivity, indifference, and want of foresight, in the friends of religious education. And now, in one part of my district, a Bill wholly secular in its character and necessary results, finds favor even with some (happily, only a few) who profess to be in favor of a religious education.

Hasty legislation to be deprecated.

At this moment the one great thing to be feared is hasty legislation.

Friends of religious education should obtain early settlement of question.

If the friends of religious education have time to arouse themselves and speak out, they will not allow a small and intolerant minority to upset the present tolerant and fair denominational system. That the present system finds favour with a large majority in my district I cannot doubt.

Renewed suggestion of free conference of all parties.

Finally, I desire to renew the suggestion which I made some years ago in one of my reports, viz., that a free conference of all parties should be held under the auspices of the Committee of Council on Education, with a view to elicit and, if possible, consolidate and amalgamate the views of all the various Christian bodies. If delegates were chosen by the different religious bodies, I firmly believe that an agreement upon the great essentials for a national system of education could be agreed upon by a large majority, without any intolerance towards the minority.

I have the honor to be, &c.

W. J. KENNEDY.

To the Right Honorable
The Lords of the Committee of Council on Education.

Appendix B.

At the request of many teachers, I here reprint a scheme of examination in religious subjects for pupil-teachers, during each of the five years of apprenticeship, being the same scheme which I set forth in an Appendix to my General Report for the year 1851. (Minutes of 1851–2, p. 355).

Teachers will be glad to learn that the Committee of Council on Education propose henceforward to set forth, in the broad sheet for apprentices, more definitely the course of study in secular subjects for each of the five years.

Extract from my Report for 1851.

"It seems desirable to define to some extent the subjects of 'religious knowledge' in which I propose to examine apprentices year by year, in order that they may be able to concentrate their attention upon some definite periodical course of study, instead of being left to skim over the whole surface of 'religious knowledge' in each year.

"Every candidate for apprenticeship is expected by the Committee of Council to be able to 'repeat the Church Catechism,' and to 'understand its meaning,' and to be 'acquainted with the outlines of Scripture history.'

"I propose, further, to divide the religious knowledge required from apprentices into five portions, and to expect them to be able to answer questions year by year in the following subjects respectively:—

"End of First Year.

"The history contained in the Old Testament to the end of Esther, with its geography and dates.

"The history contained in the three first Gospels, with its geography and dates.

"The ten commandments, with illustrations of their observance or infringement in Bible history.

"End of Second Year.

"Old Testament history as before; and in addition, the government and ceremonies of the Israelites and Jews, and the types and prophecies contained in that portion of history.

"St. John's Gospel.

"The articles of the Apostles' Creed.

"End of Third Year.

"The history contained in the Old Testament from the end of Esther to the end of Malachi, and especially the date and general scope of each prophetical book.

"The Acts of the Apostles.

"The two Sacraments as explained in the Catechism.

"End of Fourth Year.

"The subject-matter of the four greater prophets with reference to the meaning and fulfilment of their principal predictions.

"The four Gospels and Acts of the Apostles, and, in particular, the parables of our Lord.

"General account of the translation of the Bible into English; of the history of the Book of Common Prayer, and the services contained in it.

"*End of Fifth Year.*

"The twelve minor prophets.

"Dates and general scope of the Epistles in the New Testament.

"The words of the Thirty-nine Articles.

"In each year I shall probably give a question in the subjects of the preceding year, to try whether the past year's subjects are retained in the mind; and I shall not debar myself from asking questions collateral to the precise subjects I have defined. I shall also be ready to ask questions on Church history at the end of the fifth year. But a knowledge at the end of each year of the subjects I have named will be all that I shall expect. If I find it expedient to make alterations in the above-named routine, I will state it in the Appendix to my Report.

"Suitable text-books will be found in the lists of books recommended by the National Society and the Society for Promoting Christian Knowledge."

GENERAL REPORT, *for the Year* 1856, *on the* CHURCH OF ENGLAND SCHOOLS, *inspected in the Counties of* CHESTER, SALOP, *and* STAFFORD, *by Her Majesty's Inspector of Schools, the* Rev. J. P. NORRIS, M.A., Fellow of Trinity College, Cambridge.

MY LORDS, Stafford, December 1856.

Need of further assistance for inspection of district.

FOUR years ago I had occasion to report to your Lordships that the work of inspection in these counties had doubled itself since I entered the district, and you were pleased, on this showing, to assign to me an Assistant Inspector. I have now to report that it has again doubled itself; and must, therefore, again bring before your Lordships the need of additional assistance.

Increase in work to be done.

The number of schools in receipt of annual grants in 1849 was 71; in 1852 it had risen to 130; at the close of the present year it has reached 265 From the general favour with which your Lordships' measures are regarded in this part of England, it is probable that the number will go on increasing in proportion as the means of inspection are enlarged; for, since the extension of your capitation grants to all elementary schools, whether in town or country, a visit of simple inspection is nearly always followed by an application for a capitation grant. The total number of schools now on my list which have either invited inspection, or rendered themselves liable to it by receiving grants of public money, is 465. Of these 390 were inspected during the year ended 31 August; 220 by my colleague, the Rev. H. R. P. Sandford; 170 by myself. As the chief burden of the correspondence, not only with the Council Office but also with the school managers, falls upon the principal Inspector, his administrative work must go on increasing, and his time for actual inspection must decrease in the same proportion. And though, during the past year, Mr. Sandford's unremitting industry enabled us to accomplish a much larger amount of inspection than heretofore, yet numerous applications were necessarily declined, and the work that was done was too often performed under a degree of pressure incompatible with that carefulness which the task requires.

Teachers and pupil-teachers.

The number of certificated teachers in the district at the date of my last report was 228; it has now reached 250; of whom 158 are masters, and 92 are mistresses. Of pupil-teachers the number has risen from 409 to above 500. Of

the conduct of the pupil-teachers I have, as heretofore, a satisfactory report to make. Only six apprenticeships (so far as I am aware) have ceased prematurely. Of these, *two* were from death; *one* from ill-health; *one* from the unfavourable circumstances of the school; *one* from want of promise; and *only one* from misconduct. Several, of course, in so large a a number, have needed a warning that greater industry or skill or activity must be shown in future years; but, on the whole, their behaviour may well be a cause of deep satisfaction.

Schools of Science and Art.

I am glad to have to report that in Art Instruction this district maintains its pre-eminence. Of the 56 provincial Schools of Art, connected with the Department of Science and Art in London, 13 are situated in these three counties. They are in operation at the following places, viz., Birkenhead, Burslem, Chester, Dudley, Hanley, Ludlow, Macclesfield, Newcastle-under-Lyme, Smethwick, Stoke-upon-Trent, Wellington, Wenlock, and Wolverhampton. In schools of Practical Science I have no advance to report. The School of Chemistry in the Potteries continues to flourish under Mr. Leach's able superintendence. The Science School at Crewe has not, I regret to say, as yet commenced operation.

Endowed grammar schools.

There is no class of schools that stand in more urgent need of public attention than the decayed Grammar Schools, of which there are several, with considerable endowments, in my district. The difficulties in the way of re-organizing them are not nearly so great as is generally supposed. The Charity Commissioners (whose Secretary may be addressed at their office in St. James' Square) are prepared to give gratuitous advice and direction on this subject, and to indemnify trustees who may wish to act under their direction. Two endowed grammar schools in Cheshire have in this way been brought under my inspection, and have been re-organized so as to meet the altered requirements of the present day. One is at Bunbury, near Tarporley, and the other at Audlem. The following extract is from the prospectus put forth at the commencement of the year by the visitor of the Bunbury school. The promise therein made has thus far been well fulfilled; I visited the school last month, and found it already in a very efficient condition, with an attendance of ninety scholars, of whom a considerable proportion were the children of farmers:—

Bunbury Aldersey, Grammar School.

This school will open on Monday, the 4th of February, under the superintendence of Mr. W. Bailey, certificated master, of Battersea Training College, London.

The school was intended by the founder to afford a *free* education for the children of the parish and neighbourhood, but, the salary arising from the old endowment being insufficient to secure the services of a competent master, it was agreed at a public meeting of the parishioners that payments should be received from the children attending the school.

The Visitor, the Rev. W. B. Garnett, has received permission from the Governors, the Haberdashers' Company, to re-organise the school in such a manner as to meet the requirements of the present time, provided the master selected bears a *certificate of merit*. It has, therefore, been his object to place the school in such a position as to afford the best possible education at a reasonable charge.

The course of instruction will embrace the following subjects :—Scripture, reading, writing, grammar, history, geography, Latin, music, agricultural chemistry, book-keeping, arithmetic, mensuration, land-surveying, algebra, mechanics, and geometry.

The Visitor confidently hopes from the position held by Mr. Bailey on the list of Queen's scholars, from his certificate of merit (first class) in his first year, and from the high testimonials he has received of him, that he will be able to impart instruction in the foregoing subjects so as to give satisfaction to the parishioners.

Terms of Admission.

1. A few boys, the children of poor widows, or of parents whose circumstances render them quite unable to pay the lowest fee, will be admitted free, at the discretion of the Visitor; and it is earnestly requested that none who can afford to pay will apply for a free admission.
2. Children of labourers will be admitted at 2*d.* a week.
3. Children of farmers renting less than forty acres of land, and of small tradesmen, will be received upon payment of 6*s.* a quarter.
4. Children of farmers and tradesmen, not included in No. 3, will be admitted at 10*s.* a quarter.

In cases where two or more children of the same family attend the school, the first will only be charged the full price, every additional child being admitted at half price.

All payments must be made *in advance*: the quarterly payments at the commencement of each quarter, and the weekly payments on each Monday.

Evening schools.

The number of Evening Schools which have been brought under my notice during the year is about forty. In cases where special grants have been claimed with reference to them, some remarks upon their condition will be found in the Tabulated Reports. As fair samples of the rest, I may mention the following evening schools :—

West Bromwich, Messrs. Bagnalls', excellent.
Bollington, very good.
Bridgnorth, good.
Congleton, St. James', very good.
Dudley, St. John's, very fair.
Dukinfield, St. Mark's, very fair.
Shelton, Earl Granville's, good.
Hanley, Potteries, good.
Macclesfield, Hurdsfield, good.
Macclesfield, Old Church, good.
Stoke-upon-Trent, Potteries, good.
Tattenhall, good.
West Bromwich, Trinity, very fair.
Wolverhampton, St. Matthew's, very fair.
Wolverhampton, Ragged School, very fair.

There are several others, equally good with the foregoing; and I very much regret that the great pressure of our engagements has prevented me and my colleague from bestowing upon them the attention which they deserve. Nearly all of them are either in the factory districts of Cheshire or in the

mining and manufacturing districts of Staffordshire. Of those mentioned in our Tabulated Reports, only one (Tattenhall) is in a rural village.

Aid offered to evening schools.

From the fact that only twenty-three assistant-teachers are employed in the district under the Minute of 23 July 1852, and that not more than six evening-school teachers have as yet been engaged under the Minute of 1 March 1855, I cannot but infer that the managers of schools in my district do not generally understand the advantages afforded towards the maintenance of evening schools. By the latter of these Minutes, annual payments not exceeding 10*l.* are offered to persons who, while engaged in other occupations during the day, are well qualified by inclination and ability to act as teachers in evening schools. One or two such persons may be found among the Sunday-school teachers, Scripture readers, or district visitors in most parishes. The several conditions are set forth in the Minute of 1 March 1855, pp. 111, 112, in the volume of Minutes for 1854–5.

General ignorance of advantages offered under Minutes of Committee of Council;

But in this case, as in others, experience convinces me that the mere publication of a Minute, or its circulation among other official papers through the post-office, is by no means sufficient to secure to it a due degree of attention generally on the part of managers of schools. From the necessity of a document of this kind being worded so as to meet a great variety of cases, its application to a particular place is not immediately seen; and, unless it be brought home by the explanations of an Inspector or of an organizing master on the spot, there is little likelihood of its being adopted in the rural districts In towns and manufacturing districts, the teachers' associations, by giving currency to information of this kind, have rendered important service to the cause of education, and especially to the general comprehension of your Lordships' measures; but in rural districts this machinery seldom exists, and for them some further means of advertising the advantages offered by the Committee of Council on Education seem to be needed. Some suggestions on this subject will be found in an appendix to this report. (*See Appendix* B.) As a striking illustration of the truth of what I have here observed, I may refer to the circular letter addressed by your Lordships' Secretary, to myself and my colleagues, on the 21st of June last. Our attention was there called to the fact that the managers of schools appeared to be very generally ignorant of the true import of the last paragraph in the Minute of 29 April 1854. Under this Minute provision is made for recognizing a system of *half-time* attendance in schools aided under the Minute of 2 April 1853, by accepting 88 instead of 176 whole days of attendance, as the condition of a capitation grant, for boys over ten years of age who are

illustrated in case of half-time scheme.

instructed by a certificated schoolmaster, and who continue their schooling after the commencement of labour, by some regulated alternation of lessons and of work. It appears that, for the most part, those who have heard of this Minute have taken it to be a mere modification of the system of industrial schools, not understanding that "ordinary labour" meant *labour away from the school under the common kind of employers.* The circular letter of 21 June 1856 explains that, by this later Minute, the privilege granted under the original Minute of 2 April 1853 to the factory districts has been extended to the whole of Great Britain.

Importance of half-time schemes.

The express wish of the Lord President that the scope of the Minute of 29 April 1854 should be generally known, and my own unabated interest in all efforts to give a practical and industrial direction to the teaching of our rural schools, make me especially desirous to recommend this Minute to the attention of school managers in my district. The system is being admirably carried out at ACTON in Cheshire. About *sixty* of the boys in that school are *half-timers*,—earning regular wages during one half of their time, while continuing to attend school during the other half,—and are included, therefore, under the provisions of this Minute, in the number upon whom capitation grants may be claimed. The demand for their labour is so great that the master finds it difficult to meet it The parents are, by this system, reconciled to leaving their boys at school to a much more advanced age than is usual in rural places; and in their knowledge the *half-timers* seem to me to be as proficient as those who have attended the full time at school. The system is also in operation at SALTNEY near Chester, and is being attempted in other places.* As compared with other schemes of industrial work, this *half-time* scheme has the great merit of costing nothing; while further, (I quote the words of your Lordships' circular), "it affords the advantage of that truth and reality in industrial training which the arrangements of a school may imitate, but can never accomplish in the same degree as actual work for wages." It is essential to its success that the master should himself take a hearty and practical interest in the boys' field-work, and should be competent to give to his school-instruction a direct bearing upon it, by introducing for his elder boys occasional lessons, of a simple and sensible kind, on mechanics and chemistry in their applications to agriculture.

Instruction in "common things"

I believe it would be well that lessons of this kind should

* It is to be regretted that, by the wording of the Minute, it is made to appear that the scheme is intended to be confined to *boys'* schools. That it is quite as applicable to girls as to boys has been shown at Saltney. (Minutes for 1855-6, pages 478, 479.)

become more general in our rural schools, even at the risk of displacing some of the instruction now given in what may be termed more scholastic subjects. The importance of instruction in "common things" has been brought before the public by Lord Ashburton, the Dean of Hereford, Miss Burdett Coutts,* and others, and very recently, in a popular and sensible form, by the Rev. H. Fearon, whose pamphlet† has, I am glad to see, reached a third edition. Instead of calling it the "teaching of common *things*," I would rather call it the "teaching of common *principles*,"—of those principles which find their illustration and application in the "common things" of every-day life. It is much to be regretted that some who speak with authority on these subjects should have discredited this sort of instruction by gratuitously confounding it with mere *fact*-teaching. So far as the two have been confounded in practice, our teachers have been much to blame. So far as the confusion exists merely in the minds of those who advocate what they consider a more philosophical course of study for young ploughboys, the teachers may throw back the blame upon their assailants. Nobody can deprecate too strongly the practice of loading children's memories with isolated facts—curious fragments of knowledge about the outer world, unconnected with any of its laws. If the "teaching of common things" means this—however useful such knowledge may be as a recipe for getting comfortably through life—it ought to be reprobated, for it damages the child's mind. But, if it means a course of instruction in which the study of some of the simplest principles of nature is made to take the place of the principles of language, or the like, as an instrument of education, its advocates may at least claim a patient hearing for their side of the question, without incurring the imputation of being materialists.

prejudiced by confusion with fact-teaching.

Having thus endeavoured to explain what is meant, and what is not meant, by the study of "common things," with a view of clearing away any confusion that might create a prejudice against it, the question may be stated as follows. Supposing a child, of eleven or twelve years of age, to have mastered the arts of reading, writing, and ciphering, and to be able to express his thoughts, with tolerable correctness, on paper,—is it best for him to occupy the remaining year or two years of his school life in the study of language and higher mathematics, or in the study of the mechanical and chemical principles which are connected with bodily health and the common operations of daily life? The question resolves itself

Question stated as to when study of "common things" becomes preferable to other studies.

* The account of the prizes given by Miss Burdett Coutts for essays on "Common Things," at Whitelands, ought to be in the hands of every schoolmistress. The book is published by Hatchard, Piccadilly.

† "The Importance of Teaching Common Things." Rivingtons, Waterloo-place.

into this,—which study best fulfils the purposes of education? Now, the highest purpose of education is to impart wisdom. And wisdom may, perhaps, be defined in the words of our Whitsuntide collect as being "a right judgment in all things."* It would appear, therefore, that the value of this or that study, as an instrument of education, is to be measured principally by its degree of fitness for cultivating the judgment. What studies, then, are most likely to cultivate the judgment? And let it be remembered that this is not an abstract question, but one that must be considered in connexion with the age and natural aptitudes of our pupil. To attempt to answer it absolutely would be a folly. We can only express an opinion as to what is generally best at a given age.

Natural philosophy as good training for young minds as language, mathematics, &c., for older minds;

For young people between the ages of fifteen and twenty, I believe that there are no studies so well calculated to call forth and sustain efforts of thought, and so to cultivate the judgment, as the study of language and mathematics and geometry. Where, accordingly, there is a likelihood of education being prolonged to any period between those ages, I can understand that, for the sake of the future edifice, it may be well to occupy a large part of the preceding years, from ten to fifteen, in laying the groundwork of these studies. But, where a child's period of schooling is sure to close before his fifteenth year, it may be worth considering whether it is wise to commence a structure which will never be finished; whether we cannot find for him some other study more directly connected with the outer world, with which a healthy child of that age is in a state of intense sympathy; whether, for instance, the study of some of the experimental sciences may not be equally well calculated to promote accurate observation, patient thought, and right judgment. At all events we cannot be far wrong, in these matters, if we follow nature's teaching; and I think that nobody who is observant of young people will gainsay the fact that, as naturally as the studious youth, between fifteen and twenty, delights to seclude himself in an ideal world of his own creation, so naturally does the intelligent child, of ten or twelve, go forth to question the world around him, in all its varied forms of animal and vegetable life, with a restless and insatiate curiosity. If education is really,—what it has been somewhat quaintly defined to be,—"placing the growing human creature in such circumstances of direction or of restraint as may make the most of him,"

more natural,

* This seems to sum up what Hooker means in the first book of his Ecclesiastical Polity, where he says—"Education and Instruction are the means, the one by use, the other by precept, to make our natural faculty of Reason both the better, and the sooner, able to judge rightly between Truth and Error, Good and Evil." It is worth while to observe the care and admirable point with which Hooker distinguishes between *Education* and *Instruction*,—words which the less "judicious" writers of our day so frequently confound.

then, I say, it is the business of the educator to "make the most of" these natural tendencies respectively at the one age or at the other. Having thus assured ourselves that the one course of instruction is adapted, no less than the other, to fulfil the primary purpose of education, it remains to be considered how far it fulfils its secondary purpose. The secondary purpose of education is, I suppose, to furnish the scholar with such information as will be practically useful to him in after-life. That the studies which we are advocating accomplish this in a far higher degree than the study of grammar or pure mathematics will be conceded by all.

and far more practically useful.

My conclusion, therefore, is this; that, in schools of higher instruction, it would be most unwise to supersede the more abstract studies; but that, in elementary schools, and wherever the term of schooling is to end at an early age, the study of natural philosophy, as exemplified in "the common thing" of daily life, is equally well adapted to exercise the understanding, and is certainly far more useful and more congenial to the circumstances of the scholar.

Conclusion on subject of "common things."

It may be observed that, in the foregoing remarks, I have treated the question as if it lay between grammar and mathematics, on the one side, and natural philosophy on the other, to the exclusion of other subjects of instruction.

Other subjects of instruction, besides grammar and mathematics.

I should be most sorry to be supposed for one moment to undervalue the importance of history and geography; but I have long been of opinion that there is too much *task-work* in these subjects in our schools. I would willingly see the abridgments of history and the compendiums of geography entirely banished. In their stead, I would introduce books of biography and of travel, to be used as reading-books, with constant reference to the maps on the wall or on the black-board. And, as much as possible, I would encourage the children to buy these books, and to take them home to be perused by themselves in their spare time. An occasional examination might be given, by way of stimulus, in the knowledge so acquired. But, as distinct subjects of instruction, I would strike them out of the lesson-table.

History and geography.

With respect to instruction in religious knowledge, I need hardly say that I have assumed, throughout my observations, that its proper place is secured to it, in a region far above the debateable ground on which we have been standing. Without religious knowledge, a school ceases to be a place of education, and becomes a mere lecture-room where instruction in certain specified subjects is given, at certain hours of the day.

Religious knowledge.

Such mere lecture-rooms as this our English schools have never been; and I cannot discuss any educational question of this kind without wishing to remind myself that the value

Moral tone of a school.

of a school after all does not depend upon the branches of learning that are studied in it,—no, nor upon the amount of religious instruction given in it,—so much as upon *the life that is lived in it.* Unhappily for many of those who write and speak about education, this is a truth of which the full force can be comprehended by none but those who are spending days and years of their lives within the four walls of a school. Once, in a report addressed to your Lordships, I endeavoured to explain to teachers what I meant when I spoke to them of the *moral tone* of their schools. Six years have passed since that report was written, and I cannot say that I find it easier now, than I did then, to define exactly wherein this most subtle quality of a school resides. But this I know, that, the longer one lives in a school, or rather the more one's life is spent in passing through a great variety of schools, the more sensitive one becomes to this their most important characteristic. Spend an hour or two in one school, and you feel all the while as a man feels who is confronted for some time by a bad countenance. Go into another, and all is right and healthy again; and, even before you inquire what branches of instruction are there taught, you are convinced that it cannot but be well for children to spend their days in so bright and wholesome an atmosphere. Whatever be the value or direction of the intellectual teaching, there is heart, and love, and healthy moral influence at work; and therein lies the real education on which the character of the after man or after woman depends; it is this surely that Milton had in view, when he said that the end of education was "to repair the ruins of our first parents by regaining to know God aright, and out of that knowledge to love Him, to imitate Him, to be like Him."

Effect of good schools on their neighbourhoods.

It has been a source of continual happiness to me, in my district, to find the number of schools of this character yearly increasing. Where there is a high moral tone, there the intellectual instruction is nearly always of a good kind. That these schools are producing a slow but sure effect upon the population of their respective neighbourhoods, I have never for one moment doubted. For direct evidence of this, I have only to refer your Lordships to the series of letters printed in an appendix to this report (*see Appendix* C.) These documents relate exclusively to Staffordshire, and were collected in connexion with a scheme* for *registering* all the children in the county who had attended school regularly up to a certain age, in the hope that, by persuading employers of labour to give them a preference in the labour-market, we might in some

* This registration scheme cannot claim to be considered otherwise than as an experiment; but thus far it may, I think, be considered a successful one. Some remarks upon it are contained in a letter which I lately addressed to the Bishop of Lichfield, on the subject of Education in Staffordshire.

measure overcome the parents' indifference to their children's schooling. Similar evidence might have been obtained from several other parishes of Staffordshire. As far as it goes the evidence is very satisfactory, but I cannot disguise from myself the fact, that, the education given in the higher classes of these schools has been brought to bear, as yet, only upon one-tenth part of our juvenile population; and that it is altogether in vain to expect to see any diminution of crime, or any real amelioration of the mass of our people, while nine-tenths of the children escape from our schools in mere infancy.

I have the honor to be, &c.

J. P. Norris.

To the Right Honorable
The Lords of the Committee of Council on Education.

Appendix B.

In the concluding paragraph of my report for last year, I expressed my belief that much good would arise from the assignment to each Inspector of one or more organizing masters, to be employed under his direction in his district. I added a foot note to show that the suggestion was grounded upon my recent observation of the beneficial effects attending the visits of the organizing masters occasionally employed by the Diocesan Boards of Hereford and Lichfield.

Since the appointment of an Assistant Inspector in this district, I have been able to visit some hundred schools, mostly in the rural parts of my district, which had either never invited inspection before, or, for want of time, had been passed by, on previous tours of inspection. In nearly all cases, I have found these schools deplorably backward. It would be no exaggeration to say that they were ten or fifteen years in arrear of the schools that have profited by the annual grant scheme. In some instances I have been able to spend a day and a night, or a Saturday and Sunday, as the guest of the principal supporter of one of these schools. The effect of such a visit is something totally different from the effect of a mere official inspection, occupying barely three or four hours. The effect of mere inspection of one of these backward schools *may* be that the managers become aware of their defects, and are shamed into greater exertion; but in three cases out of four the effect is simply a sore and aggrieved feeling. "The Inspector," they say, "is so hurried that he cannot possibly understand the peculiar difficulties of the place; he finds fault, and publishes our faults, without in any way helping us to correct them." But the effect of the longer and more friendly visit has nearly always been that the Inspector wins the confidence of the managers, is thrown into conversation with the principal parishioners, and

helps to awaken (for the time at least) their interest in the school; that he explains, and makes them really understand, the several ways in which assistance may be obtained from Government; tells them what experiments have been attended with success in other analogous cases, in the way of higher fees, it may be, or in the way of combining children of different classes; and stimulates the teacher to read for a certificate or for registration, or advises the managers how to secure one who is more competent. In short, the result of such a visit is almost sure to be the re-organization of the school; and the first step is taken towards the attainment of the annual grant standard. Now, I need hardly say that to do this in many cases would either double the labour of the Inspector, or would cut down the number of schools inspected in the year to one-half of what otherwise might be visited. The question, therefore, arises—What are the intentions of the Committee of Council? Do their Lordships wish their Inspectors to continue to carry on, alongside of the annual grant scheme, the same propagandist work which, before the annual grant scheme, they were instructed to carry on, as occasion served? Or are their Lordships content that the Inspectors should mainly confine their attention to annual grant cases, leaving the number of these cases to go on increasing very slowly, accordingly as public opinion may happen to penetrate the several parts of their districts? If it is still their Lordships' wish that inspection should be made a means of diffusing information, and awakening educational zeal, it is my belief that in no way could this be accomplished so effectually, or so inexpensively, as by adopting the plan which I have ventured to suggest.

I will now briefly indicate the manner in which I should propose to develop the plan:—

1. *Qualifications.*—The organizing master should be selected from among the certificated teachers by the Inspector in whose district he is to be employed, subject to the approval of the Lord President and of the Diocesan or Diocesans of the district. He should be a man of some standing, and of good address.

2. *Relations to the Council Office, &c.*—He should be placed unreservedly at the disposal of the Inspector (subject of course to the instructions which would be issued to the Inspector, on his appointment); he should receive all his instructions from or through the Inspector, and account to him for the employment of his time (which, together with his travelling expenses, might be made to appear in the Inspector's diary). I should conceive it to be indispensable to the acceptableness of such an agent that he should be understood to be *confidentially attached* to the Inspector, for the single purpose of rendering assistance to those who might apply to the Inspector for such assistance, and to be invested with no sort of authority from the Committee of Council on Education.

3. *Duties.*—I have already, in fact, indicated his duties in what I have said in the early part of these remarks, with reference to the altered character of the Inspector's work since the annual grant scheme came into operation. His business should be mainly with such schools as have not yet come up to the standard of 1846. He should supplement the Inspector's work, taking up that part of it which, since 1846, the Inspector has, necessarily, in a great measure dropped. He should do a missionary work in the district. The Inspector would soon be able to make it known through his district that he has such an agent at his disposal. The Inspector would receive—perhaps invite—applications for this form of assistance. Having received and classified these applications, he would arrange the organizing master's tour. I know that in many rural parishes the organizing master would be invited to be the guest of the clergyman or, if not, of the schoolmaster;—at all events, I would propose that the school managers be held responsible for finding him board and lodging, free of cost, during his stay in each place. This should be their advance to meet the assistance thus offered. I should apprehend no difficulty in this arrangement, because the fact of his visit having been *invited* would secure to him a friendly reception. His stay at each place should vary from two days to a week, at the discretion of the Inspector after communication

with the managers. His business while there would be to furnish the supporters of the school with full information,—

(*a.*) About the several sorts of aid granted under the Committee of Council on Education;

(*b.*) About the approved methods of school organization adopted and found to succeed in the best schools of the district.

This leads me to a question which must clearly be settled preliminarily to any such scheme, viz., what is meant, in this connexion by,—

4. *School organization,* in the sense in which the term would be taken to define an organizing master's duties?

I mean it to include all that belongs to the administration of a school,—its plan, furniture, classification, rules, rate of fees, and methods of instruction. And by an organizing master I mean a professor of this science. It cannot be too clearly explained to him that he does not come with authority from the Inspector, or from the Council Office, to reorganize the school, but that he comes simply as a professor of school organization, prepared to give advice and make suggestions on all points on which he may be asked for advice and suggestions. To the Inspector he simply owes his introduction to the managers, and the payment of his locomotive expenses; any authority that he may be allowed to have *in the school* he owes entirely and solely to the managers of the school. With respect to any objection grounded on the difficulty in which an Inspector might find himself involved in reporting on a school so organized by his own agent, as an independent institution, subject like any other school to his free criticism, I apprehend no such difficulty. It would simply be as though he had himself visited the school on some previous occasion, had made some detailed suggestions for its improvement (with reference to annual grants), and had returned to ascertain how far these suggestions had been well carried into effect. Supposing the organizing master to stand in the confidential relation to the Inspector which I have suggested, any serious difference of opinion on questions of school organization could hardly occur.

5. *Remuneration.*—The salary should be clearly such as to make the appointment a promotion, as compared with the appointments open to our first-class teachers. His locomotive expenses being paid, and his board and lodging during a large portion of the year being provided without cost to himself, I should expect a salary of 100*l.* would secure the services of a first-rate teacher,—with a graduated increase up to 200*l.* if he continued to give satisfaction. During some portions of the year, as, for example, in the Christmas and Midsummer holidays, and occasionally at other times, I would suggest that his services should be used by the Inspector in attendance at collective examinations.

J. P. N.

Appendix C.

On the Practical Results of the Education given in some of the Schools of Staffordshire.

Stafford, 24 November 1856.

In order to collect some "evidence of the practical results of education, as shown in the conduct and progress of the young people who have left the better schools of Staffordshire in the course of the last eight or ten years," I issued a circular in August to some of the schools under my inspection, and have received in answer a packet of letters, which seem to me to be most instructive and interesting. To print them all would extend this

Appendix to an immoderate length, and to give only the most favourable testimonies would be hardly fair. I have, therefore, selected for publication the replies which I received from the places *where efficient schools, under my inspection, have been in operation for a period of at least ten years; and where, also, my correspondent has been connected with the schools for the same period.* This rule has excluded from my list, I am quite aware, some of the best schools in the county; but on the whole, I think, it is as fair as any principle of selection that I could adopt, and it admits the evidence of those only who have had the opportunity of watching some, at least, of their old scholars grow up to man's estate.

The extracts are arranged in order, according to the dates at which the several schools were established.

J. P. Norris.

Extracts from Replies to Mr. Norris' Circular.

Penkridge and Cannock Schools (Agricultural). Established 1820, and 1828. (From the Lord Hatherton.)

Teddesley, 12 September 1856.

I am sorry that circumstances have prevented my making an earlier reply to your circular letter, in which you request my view of the practical results of education, as shown in the conduct and progress of the young people who have left the principal National Schools in my neighbourhood. I feel no hesitation in speaking in the most positive manner of the excellent results produced by the schools connected with my property. Besides those to which I am only a contributor, there are three which are maintained almost exclusively by my family. These are Penkridge and Teddesley, and Cannock. With these schools you are well acquainted, and I confine my report to them.

With respect to Cannock School, Mr. Blackburne, who has been an active clergyman there many years, and who constantly attends that school, tells me, that, in the parish, which is extensive, and has a population of about 2,800, nearly all the children are educated, attending the National or some other school. But manufactories and mines draw them off at too early an age. Yet Mr. Blackburne expresses the strongest conviction as to the effect of education on the boys' conduct and character, observing, that commitments to prison are very few. He adds, that "the late Mr. Collis, a clergyman resident forty years in the parish, and an acting magistrate till two years ago, frequently remarked, that 'he knew few parishes that gave less work to the magistrates and the gaolers than Cannock.'"

With respect to Penkridge and Teddesley, I speak from my own observation for forty-four years. When I inherited my property here, there were few districts, as regards education, in a more neglected state. The only school in Penkridge, an extensive parish of 2,800 persons in 1820, now containing about 3,400, was a small endowed school for eight boys, the master of which had a stipend of less than 35*l.* a year, to which the inhabitants added a very scanty contribution, seldom exceeding 8*l.* a year, to assist in the education of a few additional boys and girls. There was not a school of any kind in several of the adjoining townships. The labourers' children were, with rare exceptions, totally uneducated, and the character of the labouring population, in a moral point of view, was very low. In 1820 I built the present National school, and I placed the small endowed school, of which I am hereditary and sole trustee, under the same master. The result was very striking. The school was immediately filled, and in the course of a few years an orderly adult population was bred up. Several of the boys soon procured profitable situations.

Mr. Shaw, an able teacher, and zealous master of the school for fourteen years, "knows three of his pupils now holding good and profitable situations in America, and one in Australia. There are three or four who have gained situations of 100*l.* a year, and others in greatly improved circumstances. The boys and girls during his time averaged from 220 to 240. He followed the careers of his pupils, as far as he could, after they left the school. He never knew during his time more than one of his pupils who was sent to goal, and that was not for a grave offence."

He adds, "There are not, however, many men of education to be found in the parish, the manufacturing districts absorbing them." It is hardly necessary to observe that this is a great benefit, not only to the individual, but to their families and the parish, by giving to each family a better security for independent maintenance.

The school at TEDDESLEY is for thirty boys. It is an offset of the Penkridge school, and the present character of that school is principally a work of your creation. I took originally these boys for employment on my farm. I took none, however, who were not able to read and write a little, say the Church catechism and explain it, and do a little mental arithmetic. They were generally eleven or twelve years old, and would have been lured off by wages elsewhere if I had not engaged them. These boys are instructed and employed in all those occupations with which their future life will be conversant. I treated them merely as labourers. Theirs was part of the system of labour on the farm. You, however, insisted on the duty, and policy also, of continuing their school education. I consented, I confess with reluctance, because I did not see the means of blending school with their industrial employments. I feared it would derange the system of labour on the farm, of which their labour was an important and very valuable part. They now pass the first two hours (*i. e.* from six to eight) of every morning during the period from Lady-day to Michaelmas-day under a schoolmaster. I am bound to add, that your prediction has been realized. Mr. Bright, my agent, and I concur in admitting that the boys' labour, though reduced two hours daily, is become far more valuable, by reason of their increased intelligence, and their bearing and manners are improved in a corresponding degree. Their wages vary from 7*d.* to 9*d.* a day. This teaches them to appreciate their own proficiency and labour. The payment of each is carefully advanced according to his value. It is very interesting to observe their anxiety for this advancement; evidently more the effect of a feeling of self-respect, and of a desire to stand high in the estimation of each other, and of their employer, than from estimation of the value of increased wages.

In thus reporting my observation on the effect of education in this district, I must not omit to state two most important facts. Owing to large inclosures, which have taken place in this immediate neigbourhood since 1820, and a very remarkable improvement in the system of agriculture, a great demand for labour, with better remuneration of it, has prevailed, and the parish of Penkridge especially has for many years felt the beneficial influences of zealous resident clergymen: the two at present residing at Penkridge, the Rev. J. Fell and the Rev. A. G. Cameron, having been indefatigable in their attention to the school and the parishioners generally.

There is also in the union an excellent Board of Guardians, who have had the satisfaction of being informed by the Assistant Poor Law Commissioner that theirs is the union in his district that has been most exempt from able bodied paupers in the workhouse. Indeed, with one or two momentary exceptions, I have never heard of any since the commencement of the union.

But there is still another circumstance that has exercised a most beneficial influence on the schools on my property,—I allude to the Government inspection. The constantly anticipated visits of the Inspector have greatly stimulated the masters, and increased the attention and rivalry of the boys. You have succeeded in rendering your inspection a source of the greatest interest to them, and no day is looked forward to with more pleasure than that of your visit. I must add, too, that to me, as a school trustee and proprietor, it is a very great satisfaction to reflect, that the constant vigilance of the Government Inspector might in future times supply the deficiency of others more immediately connected with the school, whether arising from absence, age, illness, or any other cause.

(Signed) HATHERTON.

BETLEY NATIONAL SCHOOL (Agricultural). Established 1826.

(From Miss E. H. Tollet.)

24 August 1856.

I RECEIVED you request for "facts" about the results of education in our neighbourhood at Buxton. The only way I could think of by which to obtain any satisfactory information was to write to inquire the characters of some of the girls

who have been for some years in service since leaving Betley school. The answers I have received from the employers of the six I fixed upon, have been, as to conduct, in every point very gratifying. Two of them, in addition to general good behaviour, had made themselves useful in teaching children and *fellow servants*. One lady says of her nursery-maid,—"She reads constantly to my children, and reads most pleasantly, and I have always found her very correct in keeping accounts of money laid out on journies or during my absence." Another mentions the same about reading pleasantly. All express themselves strongly as to the truthfulness of their girls; and, with one exception, we have generally been much satisfied on that point in those who have got to the head of the school. One lady says,—"I have had several excellent servants from Betley." As to the boys, I really could not remember any who had gone into domestic service. I believe everybody in the village of Betley acknowledges that drunkenness is diminished in the last twenty years, and that most of the drinking is done by the middle-aged men. I must tell you that, in answer to my questions about one of the servants, I got an answer which I could not possibly forward to you as a "fact;" it was,—"She was always quite perfect."

(Signed) E. H. Tollet.

Walsall Blue Coat School (Manufacturing Town). Established 1826.

(From the Rev. I. H. Sharwood.)

22 September 1856.

I am sorry I have not before this written in reply to your letter of inquiry of August, respecting the *results* of the extended system of education, as shown in the improved state of our population. I have been anxious to collect information for you, and I now forward some particulars, together with a letter from our recorder, Serjeant Clarke. I have made several inquiries into the present position and character of our old scholars, and, without mentioning names, can assure you that the result is most satisfactory, more so than I ever anticipated. Several of them are at work under the principal manufacturers and tradesmen of the town, not only employed as mechanics and workmen, but in places of trust, which they have attained by their excellent conduct and information. Some whom I could name are in counting-offices, much esteemed for their knowledge of book-keeping and arithmetic, which I can readily believe, remembering them of old as among our best scholars. Some are in America and Australia, and I often see their letters; some in the army, well reported of. One who is in the artillery service, and who was a very intelligent lad at school (Evans), in writing home has expressed the enjoyment he finds in reading and study, which I can readily believe from his previous school habits. He tells his parents, in very simple language, the interest he takes in collecting the shells and sea-weeds, &c., on the shore at Portsmouth or Plymouth, where he is quartered. An incident of a pleasing kind came under my notice only on Sunday last. An old scholar of our school (Heydon), who is living at some distance, and employed as a carpenter, and doing very well, having married, brought his child to church that it might be baptized by his old friend and pastor, and expressed himself most gratefully for the benefits of his education, which had enabled him to attain his present position, which is considerably above that of his parents. I have ventured to give you these particulars; you can, of course, make any use you please of them. In a conversation I had with our Mayor, I find he quite agrees with the Recorder in his statement that the chief criminals are strangers to the place.

(Signed) I. H. Sharwood.

Enclosure.

Having held the office of Recorder of the Borough (of Walsall) upwards of twenty years, and having in that capacity been engaged there in the administration of criminal justice, I have not found crime increase during that period, but diminish, although the population has, I believe, *greatly increased*. I confess I do not know to what to attribute this, except to the fact, that the benefits of education have been greatly extended amongst the labouring population. I should also say (speaking, however, from memory only, and having no notes or memoranda to assist my recollection) that in the cases in which I have been called upon to act

judicially, a large proportion of the criminals have been strangers to the town or neighbourhood. I certainly think that it is impossible to estimate too highly the advantages of a general system of education of the labouring classes.

(Signed) A. R. Clarke, Recorder of Walsall.

Newcastle-under-Lyne National School (Manufacturing Town).
Established 1835.

(From the Schoolmaster, Mr. Robinson.)

9 September 1856.

In answer to your letter of last month's date, I beg to forward for your information, the following particulars. From a register obtained from the Newcastle Police Office, I have been able to compile the following table of statistics :—

Date.	Number brought before Magistrates.	Number not having had any Education.	Number very imperfectly educated.	Number having had a tolerable Education.
1850	407	224	181	2
1851	399	219	176	4
1852	371	185	170	6
1853	325	186	139	0
1854	430	220	208	2
1855	473	210	260	3

The increase in 1854–5 arises from the number of militia men brought before the magistrates for conviction, and not from any retrograde movement in the morals of the inhabitants generally. My experience leads me to believe that the working class, on the whole, is more sober, frugal, industrious, and desirous of improvement, than it was ten or fifteen years back. Last November a working men's association was started by the rector, and before Christmas 300 had entered as members. I am sorry I cannot report favourably of the perseverance of a large number of them. The number has been considerably reduced during the summer months, which was to be expected; yet, I trust, we shall see them returning again as the autumn closes in. I am happy to say, that a considerable number of the members were young persons who had been educated in our schools. A great change is taking place in the working population of Newcastle since the depression of the hatting business. A large number finds employment in the Potteries; and the development of the iron trade around Newcastle has caused a large influx of miners. During the last twelve months I have received into the school a considerable number of the children of miners and others connected with the iron-works. I find the parents very anxious about their children's education. Last week a mother brought her boy, and on leaving him with me said, "I shall be glad to pay for anything he may require." I am of opinion that there is not generally the same amount of dulness in the children attending our schools as formerly. No doubt the cause is twofold : they are instructed in a much better manner, and they are the children of parents who received their education in our National schools, and they are thereby enabled to get a little assistance in their studies at home. It requires very little observation to distinguish the child of the intelligent parent from that of the ignorant one. In reference to the social advancement of the people of this locality, I may allude to the formation and successful carrying on of the several building and land societies which have started during the last seven years. By investing their earnings periodically in these societies, a great number of the working men of Newcastle are now in possession of a comfortable house and garden. These individuals have raised their status in society, and they are the more likely to think of giving their children a tolerable education. Not a few of these men received their education in our own schools. I have appended a list of boys who have passed through the school, and who are now, to the best of my knowledge, filling their several situations respectably.

(The list is too long for insertion.—J. P. N.)

(Signed) S. Robinson,
Master of the Newcastle National School.

SHELTON NATIONAL SCHOOL (Manufacturing District, Potteries). Established 1838.

(From the Rev. F. B. Grant.)

21 August 1856.

I AM thankful to be able to say that our schools (especially the girls'), since they have been under Government inspection and the operation of the pupil-teacher system, have improved in tone and efficiency. Three of the former pupil-teachers have obtained situations as schoolmistresses, where they are now doing themselves credit. Several of those brought up in these schools have obtained prizes at the examinations, continue regular attendants at Church, and are teachers in the Sunday School. The general impression among magistrates and police officers is that education is generally doing its important work, and bearing valuable fruits.

(Signed) F. B. GRANT.

KIDSGROVE CHURCH OF ENGLAND SCHOOL (Mining District). Established 1839.

(From the Rev. Prebendary Wade.)

IN 1839 a daily school was erected by the proprietor of the works, Thomas Kinnersley, Esq. Here great numbers of children were collected, and the best education then available was afforded to them. At that distant period many fears were entertained that the children's education would have utterly unfitted them for their future irksome lives of colliers and miners; but the experience of seventeen years has shown that sound education is nowhere attended with greater blessings to the workmen and masters, than in the mining districts.

In 1853 the old school was pulled down, and on its site the present noble building was erected by Mr. Kinnersley, at a cost of 1,700*l.* The schools are quite crowded, the daily attendance being above 300, and the great difficulty is now how to provide accommodation for the children pressing in for education. They are under the management of certificated teachers. They aim, not only to afford instruction to the children of the very poorest of the people, but likewise to the children of the respectable tradesman and mercantile clerk. The payments are carefully regulated from 1*d.* weekly to 10*s.* per quarter; whilst no distinction is made in the classification of the children, but what merit alone may determine. This plan works admirably. It has secured the confidence of the parents; and the annual payments of the children have risen to upwards of 130*l.*, and this in a mining district of 3,000 souls, and where there are other schools, not only of dissenters, but private individuals. The results are shown in the present improved character of the population. The schools have largely helped to promote morality, industry, and respect for the laws; and these blessed results are now apparent in a village once notorious for everything the contrary.

The absence of crime.—Not an instance can be produced of a child educated at Kidsgrove Daily School, since its formation in 1839, having been convicted as a felon.

The respect for the Church.—Every Sunday the Church is crowded with a congregation of the working class, most devout and attentive in their manner, and all respectably clothed. Many persons who remember what the appearance of the people was twenty years since, and what it is now, are struck with amazement; and it is among the young men that this change is most wonderful and apparent.

The absence of drunkenness.—Formerly this vice prevailed to a fearful extent; now it very seldom occurs that a man is fined. The workmen very generally save their money, and great numbers have built themselves good houses. But perhaps it will speak as much as anything else for the improved character of the people, when the fact is repeated that they are now paying annually upwards of 130*l.* for the education of their own children.

The scholars educated at Kidsgrove School.—Of these several have become teachers, others are now respectable tradesmen, clerks in various railway offices and mercantile pursuits. The most respectable of the artizans, miners, and labourers now employed in Kidsgrove Works, will be found to have been scholars of the school.

The school and parents.—It is found that the school has acquired such a strong hold upon the parents that they cheerfully submit to its very stringent regulations, and, in some instances, it has decided a man not to leave his employer, because he

must thus forego the advantages which he considered it confers upon his children. It helps to steady the man with a family to his master and work. A man employed at Kidsgrove had lately some difference with his employer. He received notice to leave, and, being a first-rate workman, there was no difficulty in the way of his being engaged elsewhere. Yet this man expressed, as the cause of deep regret at leaving, that he had to remove his children from a school where they were learning so well, and to which they were so strongly attached. His wife subsequently stated that one of her little boys intreated that he might be allowed to return to his old school; and he offered, if his dinner were given to him, to walk five miles daily to school. The family have since returned, and the children are all again at Kidsgrove school.

Female population.—Here a great improvement has taken place, the instances of immorality are becoming very rare, a much higher tone of morals prevails, and an inspection of the cottages of those young women who are now married, but who were once scholars, will show how far the school has helped to fit them for the duties of wives and mothers. A great many of the young women are members of a female club in the village, where the least deviation from the path of virtue insures expulsion.

Conclusion.—The whole character of the population is changed. The people themselves are conscious of this, and gratefully acknowledge it; and not long before his death presented their kind benefactor,—Thomas Kinnersly, Esq., and his lady, (on the occasion of the fifteenth anniversary of the church),—the former with a Bible, mounted in solid gold; and the latter with a costly bracelet, in testimony of their gratitude for the benefits conferred upon them and their children.

It would neither be just nor right to close this report without saying a few words on the present admirable system by which education has been so much improved and extended under the salutary influence of the Committee of Council on Education. This school is most deeply indebted to the assistance received from the Government for its present efficiency and usefulness. Without that aid it never could have effected what it has done, nor have taken such a firm grasp upon the affections of the parents and children.

(Signed) F. Wade.

Enclosure.

Rev. Sir, Police Office, Burslem, 16 August 1856.

In reply to your communication of the 15th instant, respecting the crime and condition of Kidsgrove, it will, I am sure, be gratifying to you to learn that, from July 1846 to July 1856, there were but ten persons committed for trial. Two of those were travelling boatmen, and one was a servant in the employ of the railway company. There has been no committal for trial since June 1851—except the railway servant—and his offence was committed on the line. During the same period (ten years) there have been but five persons summarily convicted, two of those were boat boys. Breaches of the peace, drunkenness, or other cases for the police seldom occur. Your wakes—which took place last month—did not produce a single police case. The inhabitants of Kidsgrove are orderly and industrious. I do not know a place in the country where the population is so great, and employing such a large number of workpeople, so free from crime. During the time I have had the management of the police of this part of the country (twelve years in January next) I have always been pleased with the reports and the remarks respecting the education of the children at Kidsgrove.

I am, &c.

To the Rev. F. Wade. (Signed) Thos. Povey, Superintendent.

Wolverhampton, St. Paul's National School (Manufacturing Town). Established 1842.

(From the Rev. W. Dalton, Rural Dean.)

4 September 1856.

In reply to your inquiry What good effects we can trace to the influence of our schools? I think I can answer without difficulty that, amidst many discouragements and trials, we have had much to encourage us in the goodly influence of sound and Scriptural education both on *children* and *parents*.

The *former* have shown great intelligence and an improved tone of morals. We sometimes had to mourn over lads who have been committed to jail; but these few

have been occasional visitors to the Sunday school,—few, if any, connected with our daily schools have been before a magistrate. We have also remarked that the children have frequently attended church of their own will. We only require them to go to church *once* on a Sunday in their school order; and we have been grateful to find that many come to the second service of their own accord. Our *Confirmations* have also proved the benefit of early training. The candidates have been far superior to those who have grown up without these advantages, both in intelligence and their future conduct. The proportion of communicants is also larger in the young people of the schools, than in other classes of society. With respect to the *parents*, I may state a fact which the experience of many clergymen will, I am sure, confirm, viz., that the fact of having had the teaching of their children in our hands has been felt to be a certain bond between pastor and people. When we visit through a large parish of nearly 6,000 people, we always find the welcome more sincere in proportion as we had the children under our care. In many ways the instruction received at the school is conveyed into the family, and, whilst it influences the parents directly or indirectly, it certainly opens our way for pastoral visits and instruction. Indeed, I may add, that if I lost my school, I should be deprived of one of the most important instruments for doing good amongst young and old.

(Signed) Wm. Dalton.

Burton-on-Trent National School (Town). Established 1844.
(From R. Thornewill, Esq.)

19 August 1856.

The results arising from our schools are, as far as we can judge, satisfactory. Thirty of the boys have obtained good situations, either in the railway or in the breweries; and are many of them, holding important posts. Eighty have gone out as apprentices to good trades. Thus, we can account for about one-fourth of the boys. They have improved their conditions and standing, and are in the way to become valuable members of society. About 400 boys have passed out of our schools since I took the management. We can give but little account of the state of the remainder. Burton has a very fluctuating population, but we have the satisfaction of seeing many of them at times at church, and frequently a few may be found spending their evenings in the reading rooms of the Young Men's Society. The education given has, at any rate, borne fruit in an improved and less awkward manner amongst the boys in the district,—less swearing, less immoral conversation, less indecent scrawling on the walls, and an improved and more religious tone altogether. There has not in the last six years been more than one case of a boy educated with us being brought before the petty session either for felony or misdemeanor, and this speaks for itself. Both boys and girls are eagerly sought for as they leave the school, and we rather suffer from the requirement,—we wish they remained longer with us. The increased cleanliness of the girls is a great recommendation to them; and I am thankful to say no children can be cleaner than ours are. Our schools seldom number less than 650 or 700 on the books. I am sure their value is fully estimated in the township, and their efficiency appreciated. Not making it a point of insisting on the peculiar views of this or that religious party, but conscientiously instilling the truths of the Gospel, we are trusted by every sect with their children. Nor do we find that objection is made to the principles of the Established Church, which are never concealed or disguised in the school, care being taken that nothing is done to offend any party. I find this matter easily managed in practice—difficult as it may appear in theory. Moderation and forbearance is all that is required,—never losing sight of the important fact, that our object is to make sincere Christians and useful members of society.

(Signed) Rob. Thornewill.

West Bromwich, St. James' N. S., (Mining District). Established 1845.
(From James Bagnall, Esq.)

6 September 1856.

The schools in connexion with St. James' church have been in operation upwards of eleven years under the same master and mistress. Previous to that time there were no day schools connected with this church. From small beginnings they have gradually improved, and for the last year and a half have numbered

upwards of 300 children in daily attendance. Nearly 3,000 have been admitted during the time these schools have been in operation, and many children having left for other schools have been re-admitted. The financial condition of these schools is steadily improving,—the payments of the children having exceeded 135*l.* for the past year. Many have become pupil-teachers, two of whom are now certificated mistresses. Several have been sent as teachers to other schools. Two have obtained Queen's scholarships. *Very many* are *regular* attendants at church; and others are known to be good workmen; and at home in domestic life, good husbands, good wives, and mothers. This important information I have obtained after very strict inquiry. Having been for many years a resident magistrate in this district, I must say that, comparing the religious and moral character of its inhabitants *twelve* years ago with what it is at the present time, we have every reason to congratulate ourselves; and I cannot help thinking that this good result is very much owing to the beneficial influence of our large and important schools. It is well known that drunkenness is one of the prevailing vices of the mining districts, but I am glad to observe that in this respect a *very striking* improvement has taken place.

Perhaps one of the best proofs of this happy change for the better may be drawn from the far better observance of the Sabbath, and the much more regular and uniform attendance at the services of our church. As I have before stated to you that upwards of 3,000 children have been admitted into these schools since they were first opened, it is rather a striking feature and a beneficial result, which I cannot help connecting with the successful operation of these schools, that, to the best of my belief, after mature *consideration* and *inquiry*, not a single child who has been there educated has been summarily punished for any breach of the law.

(Signed) James Bagnall.

Messrs. Chance's Schools, near Birmingham, (Manufacturing District—Glass). Established 1845.

(From the Schoolmaster, Mr. Talbot).

Spon Lane, 26 August 1856.

Since the receipt of your circular of the 12th instant, I have made a great many inquiries with the view of assisting myself in the formation of an opinion of the moral and social effects of the education imparted in the above school since its opening in 1845. I shall not be able to give you statistics in support of every statement which I may advance, but in all cases I shall be guided by the results of actual inquiries or observation. Of 800 boys who have passed through the above school, a large number have remained in the school to the age of twelve and upwards. Such of these as have remained in the neighbourhood have been assembled from time to time for a treat in the school-room, and thus I have been enabled to keep up a connexion with them which has been of much use to me in my inquiries.

I am informed that our old scholars in their work give entire satisfaction to their managers and employers. There is a most observable difference throughout the glass-works between the educated boys and the uneducated. It is such a difference as cannot fail to strike even the most casual observer. * * * * *

In their *recreations* old scholars form a favourable contrast to those who are uneducated. They are more respectful to each other, more methodical in their games, and more trustworthy in the duties that devolve upon them. Of two cricket clubs formed this summer, the one composed chiefly of pretty-well educated boys, the other mostly of rough and ignorant youths; the former is playing regularly, and managing its financial affairs most successfully; whilst the other, having broken up within a few weeks of starting, has not yet returned me the apparatus which I purchased for it, nor paid anything towards the rent of its ground.

In respect of *dress* and *general personal appearance* our old scholars are, for the most part, all that can be desired. Many of them look models of neatness and propriety. Most of those whom I have occasionally met, on Sundays or holidays, look, in the absence of cigars, chains, &c., just how one wishes to see an English workman always look.

I am thankful to know that in several departments of the *works* here, as well as in other places, our old scholars are gradually making way. One, besides being a good practical chemist, is managing clerk in an extensive chemical works in the

neighbourhood, belonging to the Messrs. Chance. Another educated here till he was thirteen, has just taken ten prizes from a French college, and amongst them the first prize for drawing, in which subject he excelled whilst here. A lad of sixteen called at the school the other day, and observing a class drawing at the desks, voluntarily told me that his drawing, learnt at school, obtained for him 2*s.* more per week from his employer, a mechanical engineer, than he would otherwise have had. About a dozen old scholars are clerks in offices, chiefly in those of Messrs. Chance, and they obtain good characters without exception. One youth, who died two or three years ago, had earned for himself quite an extraordinary character by his amiability, his strict integrity, and his admirable business habits. His name is still affectionately remembered by his employers and fellow clerks.

I have been at some pains to ascertain whether any old scholars have rendered themselves *amenable to justice*, and having obtained permission to examine the book of charges at the police office for this district, I was unhappy enough to find that one had been convicted of theft, and summarily sentenced to a short imprisonment. He has since attended his work very regularly, and, from what I hear respecting him, seems a sincere penitent. In order to arrive at a definite conclusion as to the proportion of well conducted youths who have received their education here, I have taken the names of 100 boys admitted in 1845-6-7, and made some inquiries respecting each of them. I am enabled, with some degree of confidence to classify them thus:—

Well-conducted	61
Doubtful	15
Unsteady	6
Unknown	18
	100

The list from which the above classification was made contained none who had been less than one year in the school.

(Signed) F. Talbot,
Master of Messrs. Chance's School.

GENERAL REPORT, *for the Year* 1856, *by Her Majesty's Inspector of Schools, the* Rev. D. J. STEWART, M.A., *on the* CHURCH OF ENGLAND SCHOOLS *inspected by him in the Counties of* CAMBRIDGE, HUNTINGDON, BEDFORD, HERTFORD, *and* BUCKINGHAM.

MY LORDS,

IN presenting this report, my first and most natural duty is to acknowledge the kind consideration of your Lordships in removing me from the Northern district to that which I now hold. I cannot sufficiently thank your Lordships for permitting me to make this change.

Review of district under inspection.

The district in which I am now employed consists of the five counties of Cambridge, Huntingdon, Bedford, Hertford, and Buckingham. The population, &c., of these counties is very considerable, and is given in detail in the following extract from the census tables of 1851 (Summary Tables, Table VI.) :—

HOUSES and POPULATION in 1851 in the Counties and Parliamentary Divisions of Counties, including represented Cities and Boroughs.

	Total No. of Members returned.	Houses.			Population.		
		Inhabited.	Uninhabited.	Building.	Persons.	Males.	Females.
Cambridge - - -	7	37,226	1,629	195	185,405	92,699	92,706
Huntingdon - -	4	13,285	632	64	64,183	31,933	32,250
Bedford - - -	4	24,678	661	127	124,478	59,941	64,537
Hertford - - -	7	32,573	1,188	207	167,298	82,831	84,467
Buckingham - -	11	33,196	1,206	98	163,723	81,074	82,649

A population of 705,087 souls represents a very large supply of children who ought to be under instruction. It has been estimated that, after making every possible deduction on account of sickness, home education, &c., one-sixth of a population ought to be found in the ordinary day schools which most localities furnish. One-sixth of the population of this district amounts to 117,514, but there is not the least ground for supposing that any such number of children is under instruction. In the returns made to the Census Commissioners in 1851, only 88,936 children were to be found on the books of all the day schools, public and private, in the whole district.

There were only 64,303 children returned as belonging to the public day schools in the five counties, and as the number in attendance is estimated at 79 per cent. of the number on the books, the number of children actually attending the public schools of *every description* was, at the date of the census, assumed to be about 50,700. Rather more than half the public day schools referred to in the census returns, that is to say, 516 out of 842, are represented as connected with the Church of England. It remains now to inquire to what extent your Lordships' Minutes have become applicable to these 516 cases. There are extremely few good schools to be found which are not liable to inspection. Every efficient school represents a considerable annual expenditure, and wherever that exists it is natural for the manager or managers to claim all that can be got from the Parliamentary grant. The number of schools in the receipt of annual grants may, therefore, be taken as a very just test of the educational efforts in operation in any given area. The following table presents a very fair analysis of the condition of the district to which this report refers. The schools entered in the column headed "Perma-

nently liable to inspection" are those to which some permanent grants had been paid up to the given date :—

—	Public Day Schools.	Supported by Church of England.	Permanently liable to Inspection, 29 May 1855.	In Receipt of Annual Grants, 29 May 1855.	In Receipt of Annual Grants, 31 Aug. 1856.
Cambridge	188	104	66	22	20
Huntingdon	95	51	37	9	9
Bedford	120	67	38	9	13
Hertford	244	164	75	22	31
Buckingham	195	130	58	16	20
	842	516	274	78	93

These figures show that, up to the 29th of May 1855, very little assistance from the Parliamentary grant had been sought by the managers of schools in the five counties above named.

Character of school premises.

In 196 schools the only sign of progress was some improvement in the details of building or fittings. Many of these buildings were erected at a time when little attention was paid to the plan or fittings of rooms intended for the instruction of classes of children. They are not, consequently, good specimens of school architecture.

Floors.

Thirty-six of the rooms referred to in the Tabulated Reports for this district for the year ending 31 August 1856 have brick or stone floors. I have had occasion to observe the injury done to the health of teachers who have had to stand daily for hours on stone floors. I have forwarded to the Council Office many certificates from medical men, attributing the break down of apprentices and teachers entirely to this cause. I am extremely thankful that so competent an authority as the Board of Health has pronounced this mode of building to be injurious to health, and I am confident that masters and mistresses of schools would very justly regret any relaxation of the regulations adopted by the Committee of Council to promote the substitution of wooden flooring for brick, stone, or concrete.

Outbuildings.

There is another of the details of school premises which equally requires the peremptory interference of your Lordships, in all cases to which the Parliamentary grants are extended. I allude to the construction of school offices. The arrangements which are often tolerated in school playgrounds would, in other circumstances, be condemned as inconsistent with health or decency. This is a point of no small importance. If a school is in good order, none of its details should shock the most fastidious criticism. It is the whole business of the school to reclaim children from the barbarities forced on them in their ill-built, ill-regulated homes. During the past year, I have been in school-rooms where the atmosphere was poisoned by the effluvium from the offices. The teachers have

complained that in hot weather the dwelling-houses and school-rooms are alike unbearable. The provision for ventilation generally adopted, however perfect in theory, are of so very little value in practice that they afford no relief. Nuisances of this kind ought to be removed by the adoption of some simple mechanical arrangements. The plan of every group of school-buildings ought to include, in all possible cases, a certain number of waterclosets. It cannot be denied that the children, for whose education the public grants are intended, are, from sheer necessity, familiarised with home-scenes which are powerful antagonists of the honesty and purity which every Christian school asserts. If, unhappily, the home of the mechanic's child wants all proper provision for the decency and comfort of humble life, it is the business of the school to show things as they ought to be.

Progress of Annual Grant cases.

In seventy-eight cases out of 274, attempts had been made up to the 29th of May 1855, to improve the quality of the instruction given, and to make the most of such assistance as your Lordships' grants furnish. In rather more than twelve months, the number of schools of this class has risen to ninety-three, which is, after all, a very inadequate provision for a district which extends from the Wash to the Thames, contains 2,982 square miles, and represents real property amounting to 3,839,549*l.*

CENSUS 1851.—SUMMARY TABLES. TABLES IV. and V.

In Cambridgeshire the number of schools in the receipt of annual grants is decreasing; in Hertfordshire, on the contrary, the increase is greater than in any other part of the district. The employment of teachers holding certificates of merit has been discontinued at Bluntisham, Buckland, Swavesey, Pirton, and Leavesden. Two of these schools had apprentices who are now employed as domestic servants. There are other

schools to which capitation grants have been paid once, but where the managers are not inclined to comply with the general conditions on which these grants are continued. Their objection is, in many cases, inability to meet the large increase of annual expense, which generally attends such changes. This objection is a very just one in parishes where a clergyman can depend on no addition to his own contributions but the pence of the children and the subscriptions of one or two landowners who feel but slight interest in school matters. In parts of this district, where lace-making or straw-plaiting are universal employments, and where the population belongs entirely to the labouring class, the amount of capitation grant which could be claimed is so trifling, that it would not relieve, to any extent worth mentioning, the additional expense of employing teachers with certificates. There are several cases where schools are from this cause entirely shut out from all prospect of any annual assistance from the Parliamentary grant. It will be my business to refer to this feature in the district in another part of this report.

Working of Pupil-teacher system.

The number of apprentices employed in the district is not very large. There are seventy-seven males and eighty-one females, making in all 158 apprentices in 102 schools. Ten have been dismissed for misconduct or unfitness, three have broken their indentures, one has died, five have completed their apprenticeship and taken up other occupations, two have gone into service as domestic servants owing to the schools in which they were employed being closed, and fifteen have obtained Queen's scholarships. The candidates for apprenticeship that have come before me during the past year have been neither numerous nor well prepared. Many of them appeared to look on apprenticeship as worth seeking, provided it could be got without trouble, but they had no idea of making any sacrifice to gain it. Several of the apprentices who have been dismissed looked on their work much in the same light. They were content to fulfil their duties only so long as they did not interfere with the unrestrained gratification of their private follies. If apprenticeship were only a device for educating at the public cost those who cannot obtain such a boon in any other way, no fault can be found with its development in this district; if, however, it is the source for supplying teachers able to carry out the education proposed to this country by your Lordships' Minutes, the progress of the system requires to be far more carefully watched. In the greater part of this country the education of the working classes is almost a missionary work. Where wages are low, it is not surprising that children are hurried from school to work. There are hundreds of families in agricultural

counties where the question is how to feed the children. That point has to be settled first. The schooling comes next. Where wages are high, there is too often a recklessness of living which acts equally against the child's interest. So that, as a general rule, it may be said that working men have to be persuaded to send their children to the parish school. If money can be extracted from a child's labour, the parental anxieties are satisfied. Every school that is worth its name represents, therefore, a hand-to-hand fight with the employers of labour. To carry on a work like this, we want men and women of high principle and great technical skill. Brilliant acquirements are not so necessary as mental activity and earnestness. Teachers of this stamp are not to be had simply by asking for them. Good training would remedy the want, if it were bestowed on good materials; but the weak point in the apprentice system is, that it does not produce a supply of candidates to select from. Every inquiry that I make shows that in this, as in the Northern district, the stipends offered by your Lordships are insufficient. In many schools no candidates can be found except the managers are prepared to pay 5*l.* per annum to eke out the stipend conditionally offered by the Government. This offer has been made in two cases in this district. Candidates were brought from great distances, but ultimately declined to be examined, because the emolument was not sufficient to compensate for the work required from them. It is undoubtedly true that boys and girls would be better paid for less work in other employments. A boy who gets a situation as page in a gentleman's household is much better paid than an apprentice, who is expected to possess superior ability and greater aptness. Apprenticeship competes with nothing. It *secures* the services of those only who are unequal to competition in other employments. Every boy or girl who becomes an apprentice under the system in its present form is supported by the personal sacrifices of some relative or friend. The managers of schools have no power to select this or that child for training; they must take what they can get, or go without. Statements of this kind are generally met by a counter-statement, that the number of apprentices on the official registers is annually increasing. That fact is not to be denied, but it does not show how that number has been obtained, nor is it any guarantee that the public money is expended on young persons best qualified to receive it. I now ask your Lordships' attention to remarks on this subject addressed to me by the manager of one of the most useful schools this district can produce.

I have been led to think the stipend offered to pupil-teachers too small, from having observed that of the children who have left our school, those who have gone to day

labour, or into service, are far better off, in a money point of view, than those who have become pupil-teachers.

From instances that have come to my knowledge, I believe, that in consequence of the smallness of the pay of the pupil-teachers, especially during the early years of their apprenticeship, we lose every year many promising boys and girls who would otherwise become pupil-teachers. I can speak of some cases, in which I know this to be so. *Parents have said, "We cannot afford to advance any money, nor can we meet those expenses which the stipend will not defray."*

In all cases of pupil-teachers with whom I have had anything to do, the same difficulty has existed, of finding money to support them during the first years of their apprenticeship. The parents, generally, cannot advance the money. School managers frequently find it inconvenient to do so.

I think the stipend too small, from the fact that 10*l. for the first year, or* 3*s.* 10*d. per week, and* 12*l.* 10*s. for the second year, or* 4*s.* 9½*d. per week, is a sum inadequate to the maintenance of a pupil-teacher, which must include lodging, board, clothes, washing, and books.*

Pupil-teachers are not apprenticed till the age of thirteen or fourteen, and probably the parents have made some sacrifice to keep their children at school so long. At day labour or in service, children earn more at the ages of thirteen or fourteen than 3*s.* 10*d. or* 4*s.* 9½*d. per week, and less is required of them both in attainments and qualifications.*

I subjoin a few facts; first, about pupil-teachers whose circumstances I know; secondly, about scholars who have left our school. The latter instances are taken quite at random, for of many children I have lost sight, and many are well provided for, though I cannot state exact particulars.

1*st.*—PUPIL-TEACHERS. *Ages from* 13 *to* 18.

A. L., About 7*l. given to him by a friend.*	*His stipend advanced by school manager.*
W. P., 2*l. paid by a poor mother,* 5*l. lent to him by school manager.*	*His stipend advanced by school manager.*
S. J., Hard struggle to live on her stipend with a little help.	*Her stipend advanced by school managers.*
E. K., 7*l.* 10*s. given by her father, a labourer.*	*Her stipend advanced by school managers.*
W. V., From 10*l. to* 15*l. lent to him by a widow mother, being savings on wages, and withdrawn from a savings' bank.*	*The master boards the boy, and waits a year, therefore, for the money.*
C. R., Hard struggle to live on his stipend, with a little help from parents.	*Tradespeople with whom he boards give him credit for a year.*
S. W., 6*l.* 10*s. lent to her by the rector.*	*Rector advances her stipend.*
M.A.F., 7*l.* 10*s. laid by in weekly deposits by her parents. Farm bailiff.*	*School managers advance the stipend.*

Of the above, four of these pupil-teachers were educated at our school.

2*nd.*—SCHOLARS *who have left* —— SCHOOL *for labour or service.*

J. H., aged 13, *Page in a large house, clothes, lodging, food, &c., and* 5*l. wages.*
M. L., „ 15, *Under housemaid, food, lodging, &c., and* 4*l. wages.*
S. B., „ 15, 9*s. per week. Letter carrier.*
G. B., „ 12, *Day labour,* 4*s. per week.*
B. F., „ 15, *Day labour,* 11*s. per week.*
B. S., „ 16, *Stable lad,* 8*s. per week.*
J. K., „ 14, *Page, well provided for.*
S. S., „ 16, *Nursery maid, everything provided, and* 5*l. or* 6*l. wages.*
T. M., „ 8, *Labourer,* 4*s. per week.*
W. F., „ 11, *Labourer,* 6*s. per week.*
D. M., „ 9, *Labourer,* 3*s. per week.*
G. S., „ 12, *Labourer,* 4*s. per week.*
M.A.M., „ 13, *Teacher in a Girls' National School (well qualified to pass as pupil-teacher, but is too poor), has lodging, good food, washing, tuition, and books, and* 1*s. per week is to be added the second year.*

The Council Office arrangements are very good, but, if apprentices could have 15*l. every year, or rather begin with* 15*l. and go on to* 20*l., we should not lose so many of*

the well-qualified young people who are now carried off into other callings, not so much because of the higher pay they then obtain, but, because they cannot maintain themselves on their stipends.

In all the cases detailed in the above memorandum, it is clear, beyond a doubt, that this school has nothing to offer as a reward for those whose tastes tempt them to remain in its service. There is no school in this district where your Lordships' Minutes are more liberally met, and yet private charity has to step in to provide it with apprentices. It is false economy in any trade or calling to offer insufficient stipends. It is paying dearly for work imperfectly done. Thus, for example, out of the thirty-six apprenticeships which have been closed in this district in the year ending August 31, 1856, only fifteen Queen's scholars have been obtained. As there is no certainty that these fifteen scholars will turn out good teachers, or that they will continue in the calling they have adopted, it is quite open for consideration whether the money expended on these thirty-six cases would not have been more profitably spent on half the number of candidates of another class, *i.e.*, on candidates more carefully chosen, and having had a better previous education.

Supply of apprentices to training colleges.

The training colleges suffer from the difficulty of finding efficient apprentices even more than elementary schools. They have no choice but to be anxious competitors for the few candidates for admission annually eligible. They receive very slight support from the country at large. They cannot afford to reject students who show no fitness for school work, and they thus send out yearly, as specimens of training, young persons who have really mistaken their calling, and who produce that dissatisfaction with normal education which school managers too often express undisguisedly. The training college at Hockerill may, with justice, look to this district for its supply of students, but there are only four girls in the five counties who will be eligible at Christmas 1856. If ten neighbouring counties are taken, the account stands thus, as far as Church of England schools are concerned:—

	Female Apprentices eligible for admission at Christmas 1856.
Cambridgshire -	3
Huntingdonshire -	1
Bedfordshire -	0
Hertfordshire -	0
Buckinghamshire -	0
Carried forward -	4

	Female Apprentices eligible for admission at Christmas 1856.
Brought forward -	4
Norfolk -	5
Suffolk -	5
Essex -	5
Kent -	5
Berkshire -	2
	26

Norfolk and Suffolk naturally furnish the supply for the Norwich training colleges. If Middlesex and Surrey are reckoned, the number eligible from twelve counties is seventy. From this total must be deducted, 1, those who do not com-

pete at all; 2, those who fail. For argument's sake, let it be supposed that all compete, which never is the case. The failures last year were no less than forty-six per cent. If this amount of inefficiency is taken as a guide in judging of the probable results of the examination at Christmas 1856, there will be 32·2 Queen's scholars from twelve counties, to be divided among *all* the training colleges for girls within reach of this area. Twelve months ago the possible supply of students from the apprentice system to the Hockerill training college stood thus in the twelve counties, of which it may be taken as a centre. In ten counties there was an average of 2·1 apprentices in their fifth year; including Middlesex, there was an average of 3·45. Taking the Queen's scholars for ten counties, the average was 1·8 for each county; with Middlesex, the average was 3·09 Queen's scholars for each of eleven counties; that is to say, that eleven counties, including *the Metropolitan county,* furnished only thirty-four Queen's scholars, a number which could easily have found accommodation in one of the large and long-established London training colleges. It seems evident that such results were not expected, for in an explanatory circular to Her Majesty's Inspectors on the Minute of 23 July 1852, the tendency of the employment of assistant teachers "*to check any excessive increase in the number of pupil-teachers*" is pointed out. So far from this caution being necessary, it appears that the supply is in all respects deficient.

Practical working of Minute of 23 July 1852.

In bringing forward facts which show, as these do, a failure in the supply of students to training schools from that particular source which was said to be likely to fill them inconveniently full, I beg leave to ask your Lordships to consider also the practical working of the Minute of 23 July 1852, which enables apprentices to obtain employment as assistant teachers, with annual stipends of 25*l.* per annum in the case of a male, and 20*l.* per annum in the case of female assistants. This Minute appears to act, so far as it acts at all, against both training and elementary schools.

In the circular addressed to Her Majesty's Inspectors on the 26th of November 1853, the advantages, and even the absolute necessity, of special training in normal colleges are thus stated:—

"*There are very few who maintain the sufficiency of a single year's training in a normal college, and those who do so dwell chiefly on the effect which the necessity of remaining for a second year will have in diminishing the supply of teachers.*

"*My Lords consider that this objection is overruled by other considerations. The Minutes of* 1846, *contemplate three years as the period of training, and their Lordships do not now regard such a term as excessive.*

"*In proportion as the pupil-teachers come to form the body from which the class of schoolmasters and schoolmistresses is to be recruited, it becomes of increased importance to give effect to normal training.*

"*These young persons are drawn, for the most part, from very humble homes; they*

have learnt the routine of teaching, and a few elementary subjects in the day schools where they have served their apprenticeship; but the first, and very often the last, point in their career, at which they are brought into intimate and domestic contact with persons of superior cultivation, and are obliged to conform to a higher standard of manners and habits, is in the normal college. My Lords, therefore, have fully determined to place some encouragement (both as regards the college and the student), on the side of training, except in the cases herein-after mentioned, for more than a single year."

It is plainly admitted in the above extract that special training in a normal college is essential for all apprentices who intend to be teachers. Apprenticeship is merely a preparatory step. I do not think the importance of this view can be overrated. The larger the Parliamentary grants to schools, the greater should be the security that such schools are in competent hands. If the superiority of trained over untrained teachers were shown unmistakeably, there is a greater probability that increased efforts would be made to employ them. But the Minute of 23 July 1852, to which I have referred, may be presumed to prevent that further and necessary training so strongly insisted on in the circular last quoted. It offers the attraction of an immediate salary of 25*l.* or 20*l.*, in place of a period of two years' residence in a training college, where personal expenses must be incurred; and at the end of three years the assistant teacher is allowed to sit for a certificate of merit. An apprentice who fails to pass the examination for Queen's scholarships may obtain employment under this Minute, and be, so far as pay is concerned, better off than those who have gained scholarships with credit. The result appears to be, that while your Lordships admit the importance of apprentices passing through training colleges, that they may gain that practical skill which apprenticeship does not at present give them, the Minute relating to assistant teachers provides a way by which an apprentice of inferior ability may obtain all the benefits of a certificate of merit only one year later than a fellow apprentice, who has been under training as a Queen's scholar for two years, the former having been at the same time in the receipt of pay from the public funds during three years. So long as your Lordships granted only a limited number of scholarships, this Minute was a means of employing apprentices for whom no scholarships could be found. As your Lordships have removed the limitation of "25 per cent. on the total number of students who shall have been resident in each training college for one year and upwards at the date of the examination" (Minute of 25 July 1850), it seems most desirable that the present arrangements for the employment of assistant teachers should be brought to a close.

Industrial employment;—

Industrial work is part of the daily employment of the children attending the schools at High Cross and Woodhill, and is also connected with the school at Hertingfordbury.

The boys at High Cross are all free scholars; they are paid one penny per hour for the cultivation of about an acre and a half of land adjoining the school. The produce of the land is sold for the benefit of the school. Each boy has a small garden, the produce of which he sells for his own benefit. This is one of those cases in which an attempt is made to educate the children of the working class by paying them for coming to school; to what an extent the offer is appreciated by those for whose benefit it is made by Mr. Puller of Youngsbury, is shown in the following table. This return refers to forty-nine boys whom I saw in the school. High Cross:

Class.	Number Present.	Average Age.	Farmers' Sons.	Mechanics' Sons.	Tradesmen's Sons.	Labourers' Sons.
I.	14	11·07	1	4	2	7
II.	15	9·52	1	4	5	5
III.	20	7·6	0	3	1	16
Total	49	9·4	2	11	8	28

It will be observed that the third class is the only one composed of labourers' boys chiefly, and that the average age of this class is only 7·6 years.

At Hertingfordbury, no boy under twelve years of age can be employed by Lord Cowper's bailiff unless he attends school three days a week, and can produce a ticket of such attendance, signed by the schoolmaster. Six boys have gardens rent-free, which are to be cultivated by spade entirely, under certain regulations, as to cropping, &c. The boys find seed and manure; each boy has the profits of his garden produce. Three girls at fourteen years of age are annually allowed to enter Lady Cowper's Female Servants' Institution, if their attendance and general conduct, while in the school, has been satisfactory. They are trained, under a resident matron's charge, in all household work, such as cooking, baking, washing, and such housemaids' employment as the institution furnishes. At the end of one and a half year's residence, situations are found for them. The institution was opened in 1846, and forty girls have gone out to service since that date. Five of these girls have married, two have died, and four have unfortunately been unable to resist the temptations to evil which have come in their way. Hertingfordbury;

The industrial work at Woodhill, in a school built and supported by Miss Franks, will be best understood from the following memorandum, drawn up by the schoolmaster. Woodhill.

INDUSTRIAL WORK, WOODHILL SCHOOL.

The whole extent of ground belonging to the school, measures about one acre, three roods.

One acre is cultivated as a field.

Two roods are cultivated as a kitchen garden.

One rood is occupied by buildings, playgrounds, flower-beds, and shrubberies.

Twelve boys are employed for one hour daily, under the superintendence of the master and two apprentices, in cultivating the above pieces. Each of the superintendents has two or more boys, as may be required, under his especial care during the appointed hour.

The industrial work forms a part of the school education, as much as any other lessons, and the boys derive no further advantage than the instruction given.

The apprentices have gardens of their own, which they rent. They grow sufficient vegetables for their own use.

The industrial work has been done, during the past year, between three and four o'clock, p.m., after the younger children have gone home. This has been altered very lately to 12.45 to 1.45 p.m. between morning and afternoon school, which works much better.

Household Work.

Five girls have been regularly employed for one hour daily during the past year in sweeping, scrubbing, and otherwise keeping tidy two bed-rooms, a kitchen, and sitting room occupied by the apprentices, the school-rooms, cloak-room, and the master's house.

Once or twice in each week they are taught cooking, how to make pies, puddings, &c. for the apprentices who live on the school premises. They also wash all dusters, towels, &c.

These girls work under the direct superintendence of the mistress, who is the master's wife, and one female apprentice, who is the master's sister. The female apprentice takes a full share in all household employments. The girls work during the same time as the boys, and on the same terms.

The number of girls instructed in household work has been increased from five to twelve.

31 *July* 1856. (Signed) J. Rossiter, Master.

This is a school which has very deservedly extended its reputation beyond the confines which usually limit the influence of such institutions. It was begun without anything to support it beyond its merits as a school. It was filled during the first year of its existence, and has since had an annual increase in the number of scholars. Whenever I have been at Woodhill, the rooms have been inconveniently crowded. The children of farmers and labourers are sent to board in the neighbourhood that they may attend the school, and Mr. Franks has very lately offered a large cottage to the master's sister, that she may receive as boarders the daughters of farmers, from whom applications have been received. The payments received in mere school fees, apart from payments for books, &c., amounted to 41*l.* 9*s.* 10*d.* for the year 1856.

A good deal of attention is given to needlework in this school, and a record of work kept on the following plan.

WORK REGISTER.

1856.	Names.	January					Work done.	—	Total Attendance.	
Class.		1st	2nd	3rd	4th	5th			Week.	Day.
1	A. B. C. D. E. F. . . .	. . .	. . .	. . .	. . .	.	Six shirts (calico) for men.			
2	A. B. C. D. . . .	. .	. .	.	.	. .	Four calico shirts for boys, marking.			
3	A. B. C. D. . . .	. .	. .	. .	. .		Skirts of twelve babies' frocks, learning to mark.			
4	A. B. C. D. . . .	. .	. .	. .	.	.	Hemming twenty strips of calico.			
	Number present daily.									

Each page is ruled for four weeks. The specimen shows the marks for five days, or one school week.

"*The needlework in a small school even,*" *Miss Franks observes,* "*is a very difficult matter, and is everywhere a most important one. Too often it is regarded by trained mistresses as a sort of something which takes care of itself. They, therefore, bestow very little thought or time upon it, whereas it takes and requires a great deal of time, much skill, and unwearied industry. I very much doubt whether any mistress can attend thoroughly to the needlework, cutting out, and preparing, who also has to instruct apprentices, carry on the ordinary work of a school, and attend to her own house. Far, far too much is required of the young schoolmistress, and the needlework is just one of those things in which she ought to have considerable help, because it requires so much time to prepare and arrange it. If it is not well prepared and arranged, the labour of the girls is wasted, and they receive little or no instruction. Many girls, therefore, leave school without having ever been taught to work, though they may have*

been made to do a certain quantity of bad hemming and sewing. I have not got the needlework in our school to a high state of efficiency, and I find myself surrounded with difficulties, but the plan that has answered the best is this:—A register is kept of the work done in each week, the register being filled up daily. This shows that the work is done, that, beginning with the simplest stitches, the children are carried on through the various gradations, till they know how to make, cut out, and put together all the things they have been taught to make. Only a certain number of the girls work at a time, thus the mistress has more power of attending to them. Every girl works three or four times during the week for two hours each time. I think three times sufficient if they are well taught, and habits of industry inculcated. All the work done at our school is paid for at the full price, and this goes towards the support of the school. The children know that they earn money for their school. The profit on the needlework has been as much as 10l., and one year was 12l., but I sometimes do some of the work myself, and prepare and tack a great deal. In a large school, the profit on the needlework would pay a needlewoman to cut out and prepare, at least I have a theory of this kind, founded on my experience."

Irregularity of attendance, and age of children, in elementary schools.

Throughout the district, schools suffer, with scarcely an exception, from great irregularity in attendance, and the early age at which children go to work. These circumstances keep down the standard of instruction, which might otherwise be maintained, and limit the number of schools to which capitation grants afford any help. When I draw attention to irregular attendance, it must be understood to include, not merely the number of weeks during the year in which children do not attend school at all, but also the habit of coming when half the morning lessons are over. At Amwell, the school begins at 9.30, and at Walkern at 10 in the morning, in order to enable the managers to insist on punctuality. At Amwell, in addition to making 9.30 the school hour, money is given to those who attend regularly a certain number of days; in other words, their punctuality is paid for. In three schools I found the doors shut at nine o'clock, the nominal hour for commencing, and neither teacher nor scholar in sight. These were cases of simple inspection, in which the notices of my proposed visit had, fortunately as I think, miscarried, and none of the preparations could be made which are but too common on these occasions. I have been in the girls' school at Hitchin on two occasions when only thirty-seven girls were present at prayers, though the numbers rose to seventy, and eighty-one, by the time the registers were called. In fact, this seems the character of the attendance in most schools, where I have been able to observe it, as at Wisbeach, Stortford, Cambridge, Hertford, Weston, Huntingdon, &c. In nine schools, where I made a note of the attendance, 472 children were not present till the greater part of the Scripture lesson was over. As apprentices are granted in proportion to the average attendance for twelve months, it is the interest of managers and teachers to delay calling over the segisters till the morning and afternoon school is half over. In rome cases the entries are made from memory at the end of the day, in some cases at the end of the morning and afternoon work, and in others at eleven o'clock and three o'clock. It

would be scarcely worth while to take registers twice in the morning and twice in the afternoon, in order to see how far the discipline of school ensures punctual attendance, because, in any well-regulated school, to come late is to break the established rule, and is visited with some penalty or other; but it would be a great improvement if the managers in a district would agree to record the attendance at one and the same hour twice a day. I regret that I have not been able to obtain any special return of the average period per annum of each child's attendance in the schools in the receipt of annual grants. As a general rule, no registers of attendance have been kept from which such results can be obtained. If the school managers with whom I have to act would allow me to suggest the introduction of the Durham registers into the schools under their charge, it would not be difficult to collect trustworthy returns which would show plainly to what extent our school system is meeting with the support of that class for which it is primarily intended. It is in my power to give a detailed account of attendance at some few places in this district. At March the school is free, and the trustees are in favour of gratuitous education. The mistress of the school stated that the names of some girls, who had never been three months at school, had remained for three years on the registers. The master stated, as the result of very many years' experience, that although the names of boys remained on the registers for seven years, their actual attendance in that period did not exceed 1·5 years. On the 1st May 1856 there were 176 boys at work in the fields, out of 266 on the register. At Aspley Guise, a mixed school, where the average attendance for the year was 113, the average number of days, per week, attended by each child during the past year was 2·908, and the average number of days, per year, attended by each child was 133·768. At Waddesdon the average number of days, per year, attended by each child in a mixed school, with an average attendance of 105, was 168·5. The school days were 230. The attendance at this school is kept up by money prizes, offered by the clergyman, to whom the school owes its existence. He has adopted the following scale:—

Want of comprehensive registers.

		s.	*d.*
Class I.	First prize for best attendance	10	0
	Second prize (two prizes)	5	0
	Third prize (two prizes)	2	6
Class II.	First prize	5	0
	Second prize (two prizes)	2	6
	Third prize	1	0
Class III.	First prize	2	0
	Second prize	0	6
	Third prize	0	6

The average age in Class I. was 11·2 years, both age and attendance having improved since the adoption of this prize-

scheme. The standard of instruction in this school appears to be above what is commonly found in purely agricultural localities. At Silsoe the girls profess to attend only four days a week. At Ampthill girls are sent (nominally) for two hours every morning to the ordinary course of lessons, on condition that the rest of the day is given to straw plaiting. These girls pay 2*d.* a week to the plaiting mistress, and work with her from six in the morning till six in the afternoon during summer, and from nine in the morning till nine at night in winter. They set no value on needlework, and there is very great difficulty in getting them to attend during the two hours' ordinary school work. The parents look on the school as a necessary evil. It is not uncommon, in small villages, to find five or six plaiting schools, where children are confined for twelve hours a day in the most pestilential atmosphere conceivable, and where 2*d.* a week is paid for the supervision of each by some woman who is supposed to be a skilful plaiter. At Pirton children attend school on condition that they plait during their lessons. At Luton and Dunstable girls are completely absorbed by the straw-bonnet trade, and grow up without any of the instruction which schools would supply. The only school at St. Alban's which claims any annual assistance from the Parliamentary grant is an infants' school. At Hockerill, the average number of days, per week, attended by each child present at all, for the quarter ending 5th April 1856, was only 3·8 days, and for the quarter ending 5th July 1856, it was 3·7 days. The return of the age of the children is equally unsatisfactory:—

	Present.	Average Age.
Class I.	18	9·7
„ II.	15	9·2
„ III.	17	8·4
„ IV.	13	7·7

This school is attached to the training college, and of course receives far more attention from the manager than is usual in ordinary cases. In thirty-nine schools in the receipt of annual grants in this district, the average age of the children in the first class was only 11·3 years. At Comberton, the age in Class I. was 8·9 years, at Colney it was 9·2.

School discipline not very satisfactory.

As children attend school in this random fashion, they bring with them the loose habits of the lanes and fields, in which they are free from control. Pushed prematurely into the world, they soon pick up enough of what they see about them to provide for their own convenience and self-preservation. They think it right to reach these ends by the shortest possible cuts. What they call honesty out of school, they call honesty in school. It is much easier to copy from a neighbour's slate than to work independently. If the fraud is detected, the disgrace is not felt very keenly. If the penalty

is heavy, it is to them a relief that the next week will bring the liberty of "bird keeping." They know perfectly that the length of their attendance at school is bounded by those almost barbarous notions of the practical worth of education which run through the working class. "It is not for the sake of *saving a penny* per week that a child is transferred from the school to the factory or fields, but for the sake of *gaining a shilling or eighteenpence* per week; and the mere opportunity of saving the penny by sending the child to a free school would not restrain the parents from making a positive addition to their weekly income, if the absence of the child could ensure it."—*Census* 1851, *Report* xxiii. Every man "takes himself and his own social *status* as the standard up to which he purposes to educate his offspring." A labouring man looks forward to a long day of burdensome toil, brightened by very few gleams of sunshine and rest. He knows the value of that handicraft alone by which he gains his bread. The child has to work side by side with the man so soon as its little limbs can in any degree handle the tools with which they are over-tasked.

"The children of the mercantile community are thought to have completed their instruction when they have become adapted for the counting-house; the sons of tradesmen when they have been fitted for apprentices; the sons of all engaged in manual industry as soon as they possess the manual strength and skill required for such pursuits. This, probably, is very false philosophy, but practically, it is to be feared, the length and character of the education given in this country to the young are regulated more by a regard to its material advantage, as connected with their future physical condition, than by any wise appreciation of the benefits of knowledge in itself. It is hardly, therefore, matter for surprise, although, undoubtedly, it is for lamentation, that the working classes, seeing that the purely mental training which their children pass through in the present class of schools can rarely exercise an influence upon their future temporal prosperity, and having, for some generations past, been tutored not to look *beyond their station*, should esteem a thorough education of this character to be not worth the time and money needful for its acquisition."—*Census of* 1851, *Report* xli.

These are conclusions, which all that I have been able to observe in the northern district and in that with which I am at present connected, entirely confirms. It is not education that is sought for children, but employment.

Schools filled to a great extent by children of middle class.

But even the average age of 11·3 years, which I have mentioned, could not be maintained without the children of the middle class who frequent the schools to which this report has reference. It is my impression that the number of children of the strictly labouring class attending parochial schools annually decreases. The gross average attendance is made up by children of the middle class, who avail themselves largely of the schools in the receipt of Parliamentary grants. In thirty-one schools in the receipt of annual grants, I saw 3,505 children. Of this number, only 1,629 were children of the labouring class; the others were children of farmers, small

shopkeepers, farm bailiffs, household servants, college servants, petty tailors, shoemakers, &c., many of whom are, no doubt, worse off than labourers in full work. There can be no objection to the admission of the children of this class to the schools annually aided by the public funds, but if it appears that they form so large a proportion of the scholars who are found in them every day, and on account of whose attendance apprentices and capitation grants are paid, it explains in some measure the great difficulties to be overcome in maintaining efficient schools in remote agricultural spots, where none but farm labourers are congregated together. The materials on which this statement is founded were given in some cases by the manager of the school, in some by the schoolmaster, and in some I was able to verify the classification by going through the school registers with the master. The social position of the children who compose our parochial schools is, of course, very variable, but I believe the specimens which follow are very fair samples of the majority of cases.

REVEREND SIR, Cranfield School, July 1856.

IN making out the enclosed table, I was so struck with the meagre proportion of children of the labouring class (I ought to have said, children of agricultural labourers), that I have been induced to carry back the investigation, so far as regards my first class, through the whole period of my mastership in this school. The result is appended, and I take the liberty of forwarding it with the form which you required.

I am, &c.

The Rev. D. J. Stewart,
Her Majesty's Inspector of Schools.

(Signed) JAMES BRINE.

July 1856.

It appears from this, that at Cranfield school, during the last five years, only three boys, sons of labourers, have been on the register of the first class, and that in the year 1856 only four boys of that order are to be found in the second class, though the average age is only 9·7 years. At Marston, the first class contained twenty-seven children whose parents were, with one exception, farmers or tradespeople. One girl, whose father was a labourer, was in this class. Out of forty-six children in Class I. and II., only five were children of the labouring class; the parents of forty-one were farmers or tradespeople. The return from Cheddington school is a very good illustration of the difficulties which beset elementary education in country parishes.

CHEDDINGTON SCHOOL.

VI.	22	4·9	1	6	15
VII.	22	4·	–	2	20
	153	6·9	20	42	91

Eighty of the children, *i. e.*, more than half the number present when the official inspection of this school took place, were infants just returned, after having been absent for the whole winter. These returns are, one and all, illustrations of a social fact which deserves very careful attention; they represent the result of the increased employment of child-labour. There are farmers in this district who employ no adult labourers during the greater part of the year. The silk factories at Aylesbury and Tring, envelope making at Hemel Hempstead, paper mills at Langley or Wooburn, all combine to darken the childhood of the poor with the cold atmosphere of unending work.

Difficulty of maintaining efficient schools.

The few facts thus brought together force into prominence the difficulty already mentioned, of maintaining in remote agricultural places the means of good education. Yet it may be said, without fear of contradiction, that these are the very spots where schools of the highest order ought to be maintained at any cost. Those who have had experience of parochial duties in remote unfrequented villages cannot look without a wide compassion on the sins which are the natural bondfellows of the indigence and seclusion in which they helplessly lie. In many of those places vice has become indigenous. The children who walk the fields, starved by neglect, grow up to manhood slaves of ignorance, crushed by unremitting toil into mere passive instruments of labour. They cannot turn to their own hearts to know what to do and what to avoid, for they have never learnt to commune with the inspiration of a life higher than that in which they are but the tools of animal instincts. Capitation grants were originally intended as aids in supporting schools in such places. The first payments of capitation grants are made with great allowances for imperfect school registers, and without insisting on any great ability in the teachers. They are merely public donations for the improvement of schools. Yet, under circumstances so favourable to school-managers, it appears that in 900 schools in rural districts connected with the Church of England, in England and Wales, only 29,437 children had attended 176 days, in the year, ending 31st December 1855.—*Minutes of Committee of Council on Education*, 1855–6, *p.* 140.

This return proves too clearly what has been said already, that very few elementary schools in rural districts even pretend to any great efficiency, and that the children attend them with such irregularity that very little progress can be made in their mental development. If any well-matured system of education were operating in this country, the whole grant would be insufficient for the demands of the one district to which this report refers. But, further, no conclusion can be

drawn from these figures that education is making its way among the labouring class, because the parentage of the children referred to is a matter of uncertainty. The observations of one inspector may be too limited to be taken as a guide on such a point, but as far as mine have extended, they prove conclusively that the children who attend our elementary schools best are not from the labouring class. At Cheddington, the schoolmaster's return shows that the school was composed of the children of farmers and small tradespeople. The last capitation grant paid to that parish was 4*l.* 13*s.* only, though in some quarters 138 children are on the books of the school. If, as I have already stated, out of 3,505 children, in 31 schools, only 1,629 belonged strictly to the labouring class, the official return in the Minutes of 1855–6 cannot be called a satisfactory one. If one half the children for whom capitation grants were paid in 1855 belonged to the labouring class, that is as large a proportion as I should expect. If these facts represent in any degree the circumstances of other districts in England, it becomes a question whether any great amount of school extension is at all probable. Large schools in towns may become self-supporting, because the children of the middle class or of highly-paid artisans can afford to attend school for longer periods, with greater regularity, and at comparatively high rates of payment. But how is education to be provided for the thousands of poor parishes which are found in England? The poor and ignorant are the very people who require, more than others, the help that a simple though sound education furnishes, but their poverty prevents them from providing schools, even if they wished for them, and their ignorance of the value of instruction makes them content to sink lower and lower in the scale of social life, and to grudge to pay for what they cannot appreciate. In connexion with this inquiry it must be borne in mind that the working expenses of a good country school are not less than those required by one in a town. It is cheaper, on the whole, to maintain a mixed school, and I am fully persuaded, from experience as a school manager, that the moral value of the mixed system is higher than that in which the sexes are separated. But to carry out this scheme a master and mistress ought to be constantly present in the school-room. This involves an outlay of 100*l.* per annum at the least. The inquiry of every manager is, naturally, what aid can be looked for from the Parliamentary grant? In theory the capitation grant meets the expenditure liberally; in practice the reverse is the case, for the attendance of children in agricultural parishes is so irregular that next to nothing can be claimed. For example, 1*l.* 10*s.* will be the grant paid this year to a well-ordered school in this district with, 123 children

on its register. Practically the whole burthen of the schools of this class falls on a few liberal supporters. There are many schools which require annually from some single contributor 100*l.* or 150*l.* Now where the landowners will do nothing to assist a clergyman whose official income is 108*l.* or 138*l.* per annum, and where the population is really a poor one, I am at a loss to see how the expenses of schools are to be met. In many parishes like those I have referred to it would be possible perhaps to maintain a school under a mistress with a certificate of merit, but since your Lordships refuse to pay even the small amount of capitation grant which might be claimed in such cases, unless the population is under 600, the result is that no annual grants reach the locality. These difficulties in the maintenance of schools are brought under your Lordships' notice at the request of many of the clergy, who are quite willing to bear a large share in the annual charges of parochial education, but are not in a condition to meet them single handed. They represent that country parishes require to be dealt with specially. The argument used against the extension of aid to schools in general, or to country schools in particular, is the importance of encouraging voluntary efforts. It is replied, that if a special rate of aid to agricultural places were once admitted, the same rate would soon be claimed and secured for towns. Admitting the justice of this view, however, it does not follow that an increase of the grants in aid of annual cost of schools would leave no room for voluntary exertions. Moreover, the State must make her own voluntary efforts before she can ask for those of her subjects. It is beyond all doubt that at this time the support of efficient schools in country parishes is a difficult and complicated question. It is equally clear also that while we are waiting for voluntary efforts to meet the case, the result to the State is the same. One generation is handing over to another a great difficulty, regardless of the consequences. It would be wiser for the people of this country to look such a difficulty in the face. Men of the highest judicial position in England, practised in weighing evidence, experienced in tracing out the causes of given results, and not likely to be led astray by enthusiasm, have placed on the records of Parliament their decision that the decrease of crime must be looked for in—

"The good that may be hoped from education, meaning thereby a sound moral and religious training, commencing in infants' schools, and followed up in schools for older pupils. There seems, in the general opinion, to be no other means that affords even a chance of lessening the number of offenders, and diminishing the atrocity of their crimes.

"The Committee, therefore, deem that they should not be discharging their duty if they did not earnestly press these momentous subjects upon the attention of the Legislature. Without raising any speculative questions on the right to punish those whom the State has left in ignorance, *it may safely be affirmed that the duty of*

all rulers is to prevent as far as may be possible the necessity of punishing, and when they do inflict punishment to attempt reformation."—*Report of Committee of House of Lords, appointed in* 1847.

Such recommendations, so plainly and forcibly stated, give every encouragement to those who, while taking their share in raising up a better spirit with respect to national education, look with patriotic anxiety for—

> " The coming of that glorious day,
> When, prizing knowledge as her noblest wealth
> And best protection, this imperial realm,
> While she exacts allegiance, shall admit
> An obligation on her part to *teach*
> Them who are born to serve her and obey;
> Binding herself by statute to secure
> For all the children whom her soil maintains
> The rudiments of letters, and inform
> The mind with moral and religious truth,
> Both understood and practised; so that none,
> However destitute, be left to droop,
> By timely culture unsustained; or run
> Into a wild disorder; or be forced
> To drudge through a weary life without the help
> Of intellectual implements and tools,
> A savage horde among the civilized,
> A servile band among the lordly free !"

Low standard of instruction.

A necessary consequence of these features in school attendance is the difficulty, if not impossibility, of maintaining a satisfactory standard of instruction in the schools aided by the Parliamentary fund. Your Lordships' deliberations have for their object the creation of a system of education for the working classes which will influence favourably the formation, and development, of a thoughtful and provident national character. But when it appears that in that branch of the population to which public measures apply, all education ceases before the age of twelve, and more commonly at nine years of age, that in many cases children attend the best schools provided for them at the rate of 2·9, or 3·9, days a week, I confess that I cannot expect teachers to make head against such a formidable opponency. No teacher can feel much personal interest in scholars who are alternately present and absent. No teacher can train children in habits of purity and innocence, or excite their emulation, or encourage their industry, or teach them to overcome their faults, and control their outbursts of fretful impatience, if he feels, and they feel, that they are sent to school to get them out of the way till work can be found for them. I admit to the full extent the depressing aspect which elementary education possesses under such circumstances, but at the same time I do not feel at all sure that teachers always take the most sensible view of the duty before them. Those who come from training colleges impressed with the very proper feeling that their work is to raise the education of their

fellow men above the stage in which they find it, are but too apt to forget that their mission is to a class that sets a very small value on their labours. A schoolmaster or mistress has to deal with people who have no conception that to direct the elasticity of mind, and incessant activity of children, into proper channels is a science whose laws and results are as certain as those of any other science. It is, in fact, the very lesson which the teacher himself has to learn. Every parish school, however, is not a model school, ready-made to the teacher's hand, well disciplined, wisely organized, and amply furnished with everything that appeals to the highest susceptibilities of youth. This is precisely what a school teacher has to create out of the rough material of a country village. Why it is not oftener approached, is the result of teachers not considering thoroughly how to gain what they aim at. In many of the schools which it is my duty to visit, the teachers attempt too much. They attempt to carry on a course of lessons suited to children of fourteen or fifteen, but not to a school where the average age is 6·9. The consequence is that, while they are proposing to carry on lessons in history, geography, and even "science," their scholars slip through their hands without ever having learnt to understand the lessons they try to read, and without having gained any aptness in reading or writing from dictation a number consisting of six figures. If a variety of subjects is day by day pressed on a child's attention, he may get a superficial acquaintance with all of them, but he will get a real knowledge of none. The lessons will be to the child mere collections of facts, which will lie upon the memory as a heavy indigestible mass. His mind will be overloaded with raw material, which he has no power to turn to account, and his memory will be taxed to no purpose. Both in selecting and in giving lessons, teachers are too apt to measure children's capacity by their own, to speak to them of matters totally beyond their grasp, and to bewilder them with addresses on the semi-scientific fragments of which too many of our modern reading-books are composed. If the business of a school was to fix in the minds of children a set of stereotyped opinions or dogmatic truths, very much might be said in favour of this system. But children do not go to school only to become the depositaries of other men's conclusions. Whether they come from the rich or the poor side of society, it is the teacher's business to teach them to think—to teach them how to use facts—not to stimulate their mental powers unwisely, but carefully and gradually to unfold and strengthen their powers of forming just opinions on whatever appeals to their judgment. I do not deny the value of facts in their proper place, but I do not think that a daily accumulation of them is

a means of training a child's mind. No lesson is a good one which does not cultivate a child's understanding without straining it. This is a slow and gradual process. It is just as impossible to steal a march on the slow development of a child's mind, as it is to hasten the growth of the bones and muscles. Every school system which tends to cram children is as unphilosophical and injurious as it is to require infants to perform the manual labour of adults. On this ground alone I feel sure that more real progress would be made in elementary schools if everything showy and superficial were struck off the time-tables, and more time, more care, and far more skill bestowed on those elementary subjects which are the foundation of all future progress.

Too many subjects of study assigned to apprentices.

I am inclined, with your Lordships' permission, to extend these observations to the course of instruction prescribed in the broad sheet for apprentices. The written exercises of apprentices and candidates for Queen's scholarships, which it has fallen to my share to revise, annually furnish what are to me very strong indications that these young persons labour under the disadvantage of having to grapple with an amount of work unsuited to their age, and too extensive for the time they can profitably devote to study. This opinion rests in part on experiments made some years ago, and is one in which I do not stand alone. I share it with friends who have devoted great attention to the special instruction of the apprentices employed in the schools under their management, with several school-masters whose devotion to their work I cordially believe, and with the Principals of two training colleges, whose observations I propose to submit to your Lordships' notice. Candidates for apprenticeship are required to possess a very limited stock of information, but the subjects of study assigned to them afterwards embrace a range so wide that they never do more than run over them superficially. Those who are provided with good memories can retain an immense amount of crude undigested facts, but very few gain from their apprenticeship, what is tenfold more valuable, precision of ideas, the power of expressing themselves well in their own language, and the ability to give a sensible opinion on any common abstract question. They become overlaid with facts. Playing on the surface of many subjects, and mastering none; their memory is unwholesomely stimulated, their judgment stunted and baffled. The results of being overtasked are, that their information on their subjects of study is inaccurate, their physical power depressed, and their value as teachers extremely questionable. Out of forty-one apprentices who have passed through one training school—

"Only seventeen have had anything like an *intelligent* knowledge of the Bible. The common facts were often utterly confused in the minds of the others. Twenty-nine knew hardly anything of the Liturgy. The meaning and time of the Christian seasons, *e. g.*, Easter, Epiphany, &c., presented great difficulties. Except in seventeen cases, the prevailing characteristic of the work of these forty-one apprentices was inaccuracy, uncertainty whether they knew a thing or not. In the seventeen exceptional cases all are included who could answer with accuracy in *any one* subject, and show that they had been well grounded in anything. In the whole number there were not more than seven or eight who did not break down decidedly in *at least one* principal subject. These remarks apply entirely to intellectual attainments. The general conduct of these young persons was very satisfactory Moreover, they soon proved, in a great majority of cases, that the system or their teachers had been in fault rather than themselves."

The testimony of the medical officer of the same institution is as follows:—

"I have frequently remarked on the want of health and physical depression manifest in the students on admission into the institution, induced, in great measure, I have every reason to believe, by *over-excited mental energies.* That they have not become, many of them, seriously invalided I attribute to change of air, and exercise in the open air. That these observations apply to the pupil-teachers with greater force is evident by referring to the many illnesses they have gone through."

The Principal of another training college has come to much the same conclusion with respect to the apprentices who have passed under his observations during seven years. They have entered the institution without that accurate knowledge of elementary subjects which is a necessary introduction to the course of instruction provided for training colleges. The work of their teachers has been from this cause greatly increased, their own success in the annual examinations has been hindered, and the proportion of time given to their training in the theory and practice of school keeping has been of necessity shortened. It has been found so impossible to reckon on students entering the institution with anything like sound and *uniform* knowledge on elementary questions, that the course of lessons on some subjects given to Queen's scholars in training has been, in some years, precisely the instruction given to the apprentices employed in the practising school. When, in addition to the work prescribed for each year's residence, students have to make up the deficiencies of their introductory course of instruction, it is out of the question that much time can be devoted to those points in which a school manager expects to see the superiority of trained teachers, viz., in the practical management of a school. Both these gentlemen "believe that very satisfactory consequences would follow from the apprentice system if greater accuracy *in a smaller number of subjects* were made imperative, and if the *extent* of the requirements, even in those fewer subjects, were brought within narrower limits." I entirely agree in this view of the apprentice system, and am extremely glad to take this opportunity of bringing it under your Lordships' notice. My colleagues

are, I believe, unanimous in thinking that too many teachers now holding certificates of merit are wanting in the technical skill necessary for their complete success within the walls of a parish school-room. School managers object that they do not show any increase of power consistent with the higher salaries they require. If your Lordships were to introduce any modification of the present system of instruction for apprentices which would tend to remove the opportunities for such criticisms, no greater assistance could be granted to elementary education.

I have the honor to be, &c.

D. J. Stewart.

To the Right Honorable
The Lords of the Committee of Council on Education.

GENERAL REPORT, *for the Year* 1856, *by Her Majesty's Inspector of Schools, the* Rev. W. WARBURTON, M.A., *on the* CHURCH OF ENGLAND SCHOOLS *inspected in the Counties of* BERKS *and* HANTS, *and in the* ISLE OF WIGHT; *together with a Report by the* Rev. JAMES RIDDELL, M.A., *on those inspected by him in the County of* WILTS.

MY LORDS, Winchester, 1856.

I HAVE the honor to present my Report for the year ended the 31st of August last, on the schools inspected by me in Hampshire and Berkshire.

Wilts. The schools in the receipt of annual grants in the county of Wilts have been inspected by the Rev. James Riddell, Fellow of Balliol; your Lordships having most kindly consented to my delegating to him my duties for the winter months, during which I was obliged to reside in a southern climate on account of my health. Mr. Riddell has reported on each of the schools which he visited, and has also written a general report containing remarks on the state of education in the county. His general report will follow mine. It is a great pleasure to me to find how highly his services were valued by the school managers with whom he came in contact in the discharge of his duties. I hope in the course of the coming winter to be able to inspect the great majority of the Wiltshire schools, and to have to report a marked advance in the condition of the schools themselves, as well as an increase in the amount of general interest taken in the subject of education, during the two years for which I have been most reluctantly compelled to leave my duties in other hands.

Berks. I have since my return examined all the schools in Berkshire in the receipt of annual grants, with the exception of two or three visited by Mr. Riddell. Windsor, Reading, and their respective neighbourhoods are supplied with good Church schools; three of the principal in the latter town have been brought under inspection since the date of my last Report, and the large and important school in St. Giles' parish, one of the first to apply for aid from your Lordships, continues to deserve the highest character. The schools at and near Windsor are making steady and decided progress; there are also a few good schools scattered about through the county in less populous localities, and I hope ere long to be able to speak from personal knowledge of the schools in the town of Faringdon. There is also a reformatory school established, within the last year, in the neighbourhood of Reading, to which I shall again have occasion to refer; but it is somewhat discouraging to find

that those to which I have alluded, and a few others of an inferior stamp, numbering in all 26, are the total of the schools out of the 150 parishes of the central and wealthy county of Berks, which have invited that annual assistance from your Lordships without which it is now pretty generally agreed that, excepting in cases of quite an unusual character, no school can be brought into a condition of efficiency. That this reluctance on the part of managers to avail themselves of your Lordships' grants does not in every case arise from any impatience of State interference, I am justified in concluding from the circumstance that, in an outlying district of Berkshire, where I was going an official round of visiting schools, I found that, with some of the managers of schools unconnected with your Lordships' Committee, Her Majesty's Inspector was supposed to be an officer acting for the National Society. In situations where one or more large and efficient schools exist a wholesome emulation is created, and the means of improving the others in the neighbourhood soon become known; but it is much to be regretted, that in localities where in the absence of wealthy and liberal supporters of schools, your Lordships' grants would be of most essential importance, the facilities for obtaining them should not be more generally understood. I have no hesitation in saying, that I believe the state of this county as regards education loudly calls for some authoritative measure, which shall have the effect of bringing the state of every portion of it into salutary publicity; whereas all that has hitherto been effected is to strengthen the hands of those who are already alive to the necessity of providing education for the children of the poor. Devoted individuals may and do accomplish wonders in their own immediate neighbourhoods; but such are, of course, and ever must be, exceptional cases, and it would be easy to show besides, that although the amount of school accommodation throughout the country is daily becoming more nearly commensurate with the numbers of the labouring population of an age to be under instruction, still the local distribution of the schools is so uneven and irregular as compared with that of this population, that the idea of an education which is to be in any sense national would seem as far as ever from being realized. Nor does there appear to be any prospect of things assuming a different complexion, unless steps are taken in the direction of ascertaining the circumstances of such districts as have hitherto shown no disposition to move of their own accord; to take measures to obtain possession of such information is a step which would appear of necessity to come first in order, before anything is done in the way of enforcing attendance of children, or of levying a rate for education.

It is most discouraging to every Inspector who has his work really at heart, to take up a map of his district, and, marking out here and there the schools which he knows to be doing their work well, to contrast these few and far-between spots with the wide circumjacent country, of the state of which, as regards education, he has no knowledge, and, at present, no right to go in search of it, and in which the presumption is, that the children are growing up almost in ignorance, or, at best, obliged to be contented with much the same quantity and quality of head learning and moral culture which satisfied the last generation. Moreover, it is not only with the general object of spreading information with respect to the available aids to education, that Her Majesty's Inspectors should make it a point to visit "simple inspection" cases, but for the purpose of ascertaining in what manner the liberal grants made from time to time by your Lordships' Committee for building and similar purposes have been turned to account by the managers; for there is much reason to apprehend, that in many instances where large sums have been expended in erecting commodious school-buildings, the result is anything but proportioned to the outlay. I have myself visited schools where the imposing exterior of the structure has led me to expect a large, if not a good school, and found on entering, a few little girls scattered in irregular groups about the room, superintended by a slatternly woman, perhaps with an infant in her arms, or half a dozen boys of different ages getting by heart the spelling of words of four and five syllables from a page torn out of a book, and barely kept from rioting about by the constantly uplifted stick, or the poor old man, or may be cripple, who, everything else failing, has taken at last to school-keeping, the most hopeless of all trades for a man to attempt to carry on without having learned how. All the Inspectors unite in stating, that in cases when their routine duties of inspecting annual-grant schools have left them leisure to make exploring expeditions to visit schools which have received building grants only, meeting generally with a number of strangers not immediately connected with the several schools, they have had it in their power either to awaken interest or to do away with prejudice, or to convey such information respecting details, as has led to far more important results than can be expected from the yearly visits of inspection to well-established and supported schools. It has often struck me that, in consideration of the extreme importance of working up schools like these and others to which admission would willingly be accorded in outlying districts, to visit which is simply impossible with the present amount of regularly recurring calls on our time, a dis-

cretion might be given to Her Majesty's Inspectors of recommending, that the annual inspection of a school of the efficiency of which they had reason to be thoroughly satisfied, should be occasionally omitted for one turn, (of course, without its being allowed to transpire which school would on any occasion be so passed over,) and that the payments for the year should be made upon the security of the managers' certificates, and the examination passed by the pupil-teachers. I do not see that there would be any danger of the schools relaxing in discipline or instruction from the possibility of their being passed by, as no schools should ever be so dealt with, but such as would have sufficient respect for their own reputation and standing as to be almost independent of the stimulus of official censure or commendation, and because the teachers of the schools so passed over would be in a state of wholesome expectancy, and therefore of preparation, up to the last moment.

Hants, and Isle of Wight.

Although the latter portion of the foregoing remarks applies equally to the whole of my district, yet I am happily able to speak in different and more hopeful language, of the progress of elementary Church education in Hampshire. It appears, from the calculations of Mr. Horace Mann, that this county occupies a position with respect to elementary Church education second only to one other (Wiltshire); and though it may not stand a comparison with others in northern districts as to the part which it has borne in helping on the cause, by originating or adopting new schemes for the encouragement of education, it must be admitted that as steady and even an advance has been made from the first in Hampshire as in any other part of the country. Every year has seen a large increase of school-accommodation provided, a proportionate augmentation of the number of certificated teachers employed, an improved standard of instruction, and a fuller recognition of the possibility and necessity of providing sound instruction and Christian training for the children of the poor. Here, as elsewhere, though, perhaps, to a more than ordinary extent, the larger towns have taken the lead; and, in most of these, the Church school accommodation may be said to be fairly adequate. In the city of Winchester upwards of 5,000*l.* has been raised for school-building purposes, exclusive of sites gratuitously presented. Many new schools have recently been erected in and near Southampton. There is a well-conducted and flourishing school at Newport in the Isle of Wight, and money has been collected for the erection of schools on a large scale at Ryde; Portsmouth and Gosport are fairly provided for in respect of schools connected with the Established Church, as are Odiham, Alton, Petersfield, Stockbridge, Lymington, and

Ringwood. The schools at the latter place are among the best in my district. There is also, I understand, a good parochial school at Basingstoke, but this I have not been invited to visit. Besides these, several excellent schools are to be found in isolated country parishes, as at Abbott's Ann, Brown Candover, Woolton Hill, and King's Somborne. In the Appendix will be found a letter from the vicar of the last-named parish, detailing an interesting occurrence which took place there, on the occasion of his convening a meeting of ratepayers to consider the means of meeting your Lordships' requirements with respect to certain alterations in the infant school. It may be remembered that, when the Dean of Hereford first began his school improvements at King's Somborne, he found that the farmers, instead of lending him a helping hand, showed themselves rather hostile to the undertaking, and appeared to be of opinion that no good would come of teaching village-boys geography and grammar. It is a significant and encouraging fact that, at the above-mentioned meeting, a proposal was made by the most influential individual of this very class, that, instead of patching up the old infant school-room, as was originally intended, a new building should be erected at the expense of the parish, a proposition which led ultimately to the plan now adopted, of placing the infants in the old class-room, converting the dwelling-house of the schoolmistress into two new class-rooms, and building a house adjoining for her accommodation. (*Vide Appendix* B.) As the school at Brown Candover has only recently been placed on its present footing, I shall say no more respecting it than that the managers have it in contemplation to provide such an education in this school as shall be suitable for children of all classes of society. With a view to this object they have established classes for music, drawing, ancient history, Euclid, and the French language (the latter to be taught by a foreigner engaged for that purpose), and this in addition to the ordinary subjects of education in elementary schools. Thirty-five children are now boarded and lodged in the master's house; the classes are composed of the children of labourers, farmers, and tradespeople, the daughters and nieces of the rector taking their places along with the rest. I hope to be able next year to give an account of the successful progress of this undertaking.

Industrial Schools.

At Woolton Hill, besides a very fair elementary school, there is a successfully-conducted industrial department for training boys in field and garden work. I regret that my colleague was prevented by the severity of the weather on the day when he visited this establishment, from going minutely into the details of the outdoor arrangements. I may as well take this opportunity of stating that, in addition to the admirably con-

ducted industrial department of the Royal School in Windsor Park, there is another at Winkfield, in the same county, in which the results would appear to have been satisfactory for the last three years. I append a letter (*Appendix* C.) with which I have been favoured by the master of this institution, giving some interesting details respecting the working of the industrial establishment.

Night Schools.

Much attention has lately been attracted in my district to the subject of night schools, to which your Lordships' recent Minute has given a considerable impulse. At a large and influential meeting of school supporters, held not very long since at Basingstoke, it seemed to be the feeling of a majority of those present, that this mode of extending the advantages of education to young men and lads who have been taken away from the day schools was decidedly to be encouraged in preference to the alternative of a half-time system. The speakers were, however, almost all of opinion, that to carry on a night school efficiently, and even to keep up the attendance after novelty had ceased to attract, the constant presence of one or more of the parochial clergymen, or of some one in a similar position, was indispensable. I have received many invitations to inspect schools of this kind, but my engagements have not admitted of my visiting more than two, both of them managed and supported by Mrs. Poulett Scrope. They seemed to be doing their work extremely well, and to be placed upon such a footing, and attended by pupils with such an earnest desire for self-improvement, as rendered the constant presence of any one besides the teachers unnecessary. The chief difficulties with which the masters had to contend appeared to be, first, an irregularity of the attainments of the scholars, which rendered individual teaching to a great extent necessary; and, secondly, the drowsiness which follows, I suppose inevitably, on a long day's work in the sharp winter air. The pupils at these two schools certainly seemed to be at great pains to keep awake on the evenings when I visited them. To overcome the latter difficulty, of course, requires a more than ordinarily animated method of instruction and constant attention on the part of the teacher to make his lesson as entertaining as possible. Considerable judgment is also required on his part to avoid hurting the feeling of those who are very much behind for their age, at it is generally necessary, when the attendance is numerous, to place adults in the same class with little boys who have only just been taken away from school to work in the fields, and who are apt sometimes to take too manifest a pride in displaying their superior knowledge in contrast to the deficiencies of their seniors. I am strongly impressed with one fact respecting night schools as

they are at present constituted, which is this, that only a very limited amount of learning on the part of the teachers is necessary, and that natural energy, good humour, and animal spirits, if united with earnestness of purpose, are the main qualifications to be looked for in choosing one.

Reformatory Schools.

Berks and Hants are now both provided with reformatory schools. That for the latter county, in the neighbourhood of Southampton, I have not yet had occasion to visit, though courteously invited to do so by some of its supporters. The Berkshire Reformatory is situated at Shinfield near Reading. This institution was quite in its infancy at the time of my visiting it last summer. The premises, which, together with four acres of land adjoining, were purchased for 400*l.*, consist of apartments for the superintendent and the master, a committee-room, dining-hall, dormitory, hospital, and tool-house, and afford accommodation for thirty boys. At the date of my visit there were eighteen, all of them but one under sentence. The managers contemplate the erection, in due time, of a barn, out-houses, &c., and the purchase of fifteen additional acres of land, in order, firstly, that the boys may always be employed near home; and, secondly, that the farm may be sufficiently large to make it good economy to keep a horse and cart, and so give the boys the benefit of becoming accustomed to the management of them. The boys were employed, under the eye of the superintendent or master, in haymaking, by a neighbouring proprietor, who was to pay 6*d.* a-day to the institution for the services of each. It is calculated that the expenses of each inmate for, board and tuition, amount to 12*s.* a-week, of which 5*s.* are to be levied, when possible, upon the parents. They are supplied with seconds bread, and with meat once a-day. It has been found to be expedient to allow each 2*d.* a week as long as he conducts himself properly. The only advantage which the somewhat peculiar circumstances of this institution enable the managers to take of your Lordships' Minute in encouragement of reformatories is the grant in part payment of the salary of an assistant, and of this they intend to avail themselves. They are to work on the land as farm-labourers, and for the usual hours. They begin and end the day with prayer; such portions of the morning and evening and of wet days as can be so appropriated are employed in religious instruction, reading, writing, and cyphering, with such of the rudiments of carpentry, tailoring, shoemaking, and "common things," as the teachers are able to impart, and are likely to be of service to them in after-life. Rather more than half of the boys can read fairly, and all were at least as respectful and well-mannered as most National school boys. The admissions are at present confined to such boys "as give

a reasonable hope of reformation, and of becoming one day useful members of society; and the visitors, at their discretion, reject all who do not answer to this description, and also such cases of trifling misconduct as may reasonably be expected to yield to ordinary management and discipline." The school was established and is supported by voluntary contributions throughout the county.

Elementary Schools receiving annual grants.

There are at present 119 schools in Berks, Hants, and the Isle of Wight receiving annual assistance from your Lordships' Committee. The number of certificated masters and mistresses employed in them is 126, and of pupil-teachers 225; of assistants, under the Minute of the 23rd of July 1854, there are but 3. Within the last year about seventy-two candidates from those counties were examined, and rather less than half that number admitted to apprenticeships.

Pupil-teachers.

Of the above-mentioned 225 pupil-teachers, twenty completed their term of service within the year, and I have ascertained that the majority of these have made up their minds to proceed with their professional training at a normal school; but I regret to have to add that, in some instances, difficulties of a trivial nature encountered on the one hand, or allurements held out on the other, have proved sufficient to withdraw pupil-teachers of much promise from the career on which they entered, with the implied intention of not lightly abandoning it. I have not found in my district that there is any unwillingness on the part of parents to accept apprenticeships for their children on the existing conditions, but, owing to the increased price of provisions, there is now a difficulty which formerly did not exist to the same extent of procuring candidates from a distance in cases when there are none in the immediate neighbourhood qualified to pass the examination. The stipend for the first year, though perhaps sufficient for the maintenance of a member of a family in his own home, proving inadequate to meet the expense of board and lodging away from it. This circumstance is unfortunate; for the power of drawing apprentices from a distance, while it gives a larger choice and increases the probability of procuring candidates with a decided turn for teaching, does away with the awkwardness inseparable from suddenly elevating a boy or girl from among the children in the classes into a position of authority over them.

Certificated teachers.

The number of certificated teachers above stated shows a considerable increase over past years, giving, in fact, above an average of one for each school establishment inspected. This is the most encouraging fact which I have to record, as I believe these teachers to be, upon the whole, as efficient and devoted a body as are to be found in any part of the country.

For many of them, whose names occur to me at this moment, —some working in out-of-the-way villages, and others, under circumstances of difficulty and discouragement, working, to all appearance, for the work's sake,—I cherish sentiments of respect and esteem, which only require longer acquaintance than falls to the lot of an Inspector, to ripen into affectionate regard. It is difficult to speak too highly of their labours, and of the spirit in which they have been undertaken. I honestly believe that in the examination of the schools under the charge of some whom I could name, an Inspector has good reason to be satisfied if he leaves behind him the same amount of good which he carries away himself.

Teachers' associations.

Among the discouragements and trials which seem to weigh as heavily on the minds and to depress the energies of teachers as much as any others may be mentioned the feeling of want of sympathy, and the fact of their separation from other persons having interests in common with themselves. The position of the teachers, though daily becoming less so, is still sufficiently unrecognized and ill-defined to admit of the occurrence of misunderstandings in their intercourse with their neighbours, trivial indeed in themselves, but sufficient to wound the feelings of persons of sensitive minds. Slights, not perhaps intended, are frequently deeply felt; and enough allowance is not made by schoolmasters and mistresses for the long standing social prejudices of one class, or the pardonable ignorance of the other, who are disposed to undervalue the teacher and the teacher's work, simply because, in homely phrase, "they know no better." But this is not all; there is, besides, the craving for the companionship of others taking that close interest in details, which those only can feel who are engaged in the same daily round of specific duties, with a view to comparing notes and talking over difficulties. These wants are met to a certain extent by the establishment of school-teachers' associations, now so general throughout the country. In Hampshire there are as yet only two such associations,—one having for its centre Newport, in the Isle of Wight, numbering, as appears by the last annual report, forty members, and one at Winchester with fourteen. Both these societies have been found useful in their respective neighbourhoods; their meetings have been regularly held, and the practical results have been satisfactory. It is suggested that the members of the "Hampshire Church Education" society, consisting of about 250, might, with advantage, meet in localities were associations have not yet been formed. If means were placed at the disposal of the committee for the creation of a larger stock than they have been hitherto able to purchase of schoolbooks, apparatus, and models, they would have more advantages to offer to their branches than they now hold out, and

the numbers of associations would no doubt be considerably increased. A general meeting of the society took place at Winchester on the 12th of August. That and the following day were taken up with hearing an address delivered by Mr. Wyndham Portal, and a lecture by the master of St. Cross; the reading of the successful compositions for the Diocesan School Teachers' Prizes (seven of which are now competed for annually); and in listening to and criticising model lessons. On the 14th, above a hundred members of the society adjourned to Farnham Castle, where they were hospitably entertained by the Bishop of the diocese. It is stated that at the conferences which took place on the above occasion the discussions were "full of interest," and that "there is everything to lead to the conviction that the calm, thoughtful, and earnest examination of details, and comparison of plans, methods, and principles which these meetings call forth are of very great benefit to those who attend them."

I have the honor to be, &c.

WILLIAM WARBURTON.

To the Right Honorable
The Lords of the Committee of Council on Education.

Rev. JAMES RIDDELL'S *Report on the* CHURCH OF ENGLAND SCHOOLS, *inspected by him in the County of* WILTS.

MY LORDS, 17 May 1856.

THE following Report relates to schools in Wiltshire, in receipt of annual grants, inspected by me in the months of November and December 1855, and of January, February, and March 1856.

Many of these schools not having been inspected in the previous year, owing to Mr. Warburton's absence, I subjoined to my own entry on the parchment certificates (wherever forthcoming) of the teachers of such schools an explanatory note to the following effect: "N.B.—The master [mistress] has missed one annual entry, owing to his [her] school not having been inspected last year."

Changes of teachers.

It is worth while to draw attention to the large proportion of schools in which changes of teachers either had occurred during the current school year, or were about to occur immediately after the inspection. The number of certified teachers who fell under my notice (neglecting the few holding new

schools) being 41, eighteen were either newly come or just leaving, none of these being dependent on each other as man and wife, brother and sister, or the like. Thus, of schools under certified teachers, in more than three out of seven a change had taken place within the year. The changes in the case of teachers not certified nor registered were four in twenty-eight, or exactly one in seven.

Pupil-teachers.

The pupil-teachers, as a body, stand high in conduct and character. It is satisfactory, also, that most of them, to judge from their appearance, enjoy good bodily health. Female candidates for the office are plentiful. Male candidates are scarce; nor are schools in which this embarrassment occurs able often to supply themselves from elsewhere, since the expense of maintaining a boy away from home is too great a burden for many parents to incur.

Pupil-teachers wronged by teachers.

One or two instances have come before me of wrongful behaviour of teachers towards their apprentices. In one case, where the mistress took it into her head to change her situation, an apprentice in her first year was thereby left for nearly a year dependent for her instruction on the kindness of the clergyman, who, meanwhile, was looking out for another mistress; until at length she was adopted into a vacant apprenticeship in a neighbouring school. In another case, an uncertified master had succeeded, in July, to a school where there was an apprentice in her first year, on the understanding that he was to sit for a certificate the following Christmas. This, when the time came, he declined to do, alleging that he had, meanwhile, determined to leave the school. In another case, the mistress had begun to require her apprentice to do her household work for her, when the managers promptly interfered. An irregularity, perhaps less deliberate, occurred in another case; it consisted in the mistress giving the apprentice her instruction three times a week instead of five, for three hours each time.

Assistant teachers.

There is a considerable demand for assistant teachers, but a very small supply. The demand is very much a consequence of the now general feeling in favour of evening schools.

School buildings, &c.

The presence of an *echo* is often so great a drawback to school-rooms otherwise very good, that it may be worth while to notice an instance of a construction, not on every account to be imitated, but which certainly excludes this evil; namely, one where the combination exists of a thatched open roof and a floor of wooden blocks. Nearly the same effect is obtained without thatch in a school in Hants, where I noticed that the rafters, being left to project beyond the plaster, were set at very close intervals.

It would be an easy and considerate addition to every

gallery, especially for infants, if (as at St. Peter's Schools, Marlbrough,) every seat had a rail to rest the back.

School registers.

To the keeping of school registers, increased attention seems generally to be given. In one case only there was nothing satisfactory to show; the teacher here was not certified or registered. In two cases I had to remark upon mistakes in the method of striking the averages; in one, the average had been unduly raised by reckoning half-days of attendance as whole days; in the other, having been obtained for the year by simply taking the mean between the highest and lowest weekly averages, it had, doubtless, been depressed unfairly, as thereby one week of extraordinarily thin attendance brought down the whole.

Children's attendance.

For the great irregularity, often deplored, in the attendance of agricultural children, the parents seem often less answerable than the farmers, who in many cases, I am told, intimate pretty plainly to a father that his own continuance in their employ depends on their having also the use of the boy-labour at his disposal.

Discipline.

Efficiency of discipline and of instruction seem in practice to vary together. There is one test which I have found almost suffice for both, namely, the presence of the *habit* of *attention*, which cannot exist except as the joint result of good training and good, well-imparted intruction. I find the bad habit of guessing almost universally kept in check. Copying is rather more common; it occurs more frequently when children are crowded, and more frequently among girls than among boys.

Instruction 1. Reading.

I have found the most invariable concomitant of good reading to be carefulness about spelling; where children have been taught (for instance) before spelling a word pronounced, to pronounce its syllables dividedly, and thus to understand how sounds go to make up a compound sound. More advanced excellence depends, of course, on the model afforded by the teacher.

2. Writing.

In schools with highly sloped desks, I have generally, from whatever cause, found smeared and blotted copy-books, with cramped writing.

3. Arithmetic.

Sound and sure knowledge of arithmetic I have generally, not always, found to vary with the amount of time bestowed on conveying intelligent notions of numeration. As to the "mental arithmetic" practised in some schools by the elder children, what I have ascertained of its method induces me to set little store by it. The operations of addition, multiplication, &c., are not performed in the head by any natural head process, but by the identical Set-down-two-and-carry-one process, carried on in the imagination instead of on the black-board. The expedients by which many apparently harder questions are solved "mentally" are just so many useful tricks, better

of course when their rationale is understood than when they are applied unintelligently, but still mere empirical aids, in no wise tending to strengthen the calculating faculty.

4. Religious knowledge.

The religious instruction of the children is generally well cared for; the fact, however, does not seem to be recognised in some schools, that a story from the Bible, taught from a picture, is much more appropriate food for minds of the age of five or six than learning set answers to set questions. They learn to say the Lord's Prayer, which is well; for little as they may understand of the words, they understand (I fully believe) that they are a prayer. But,—except when there is a deficiency of teaching power,—which will interest, which instruct children most, the Bible taught from pictures, or "First Steps to Catechism"? I should think the former. Not but that in the choice of Bible stories a better discretion might sometimes be exercised. Is it well to bring Cain, the murderer, before children's thoughts so vividly? Is not, again, the story of our Lord's life,—a life which has continuance into present time,—more capable of being realized and brought home, more pictorial, more touching, more important than other Scripture stories, and therefore worthy to be taught in precedence of them?

5. Needlework.

I mention the subject of needlework in order to notice a plan which has been found to answer in Bradford Parochial School. The girls there about the age of eleven are taught embroidery. This sounds outrageous to many ears. But the truth is, that they are thus retained in the school long after they otherwise would have gone to the factory, continuing to receive intellectual and other instruction in the mornings, and employed with their needle in the afternoons. It is to be marked that they are not permitted to begin embroidery before the age of eleven, but are instructed until then in plain work. The proceeds of the sale of the fine work are given to the girls, and amount to a sum of from 1*s.* to 2*s.* 6*d.* a week each. Instruction in fine work is not to be had elsewhere in the place. Thus the parents are induced to continue their children at school, first up to eleven by the prospective advantage, and then beyond eleven by the actual advantage.*

Presence of patrons and friends in the school on the day of inspection.

The stigma or the excuse of dulness does not attach to the Wiltshire children generally. Answers, perhaps quaint enough, but showing sense, may be elicited in any Wiltshire school. They (and perhaps others) are liable, however, to a fit of shyness in the presence of anything like an audience. They get on very well with the Inspector; but it is a fact to be regretted, because the attendance of those whom they look up to is in itself very desirable, that the exhibition which

* This scheme has since developed into much greater completeness in the hands of its able projectors, the Rev. W. H. Jones, vicar, and his lady.—Jan. 1857, J. R.

they make *before them*, does *generally*, though not always, fail to do justice to their attainments and disappoint their auditors. Probably the day of inspection is the only day in the year when they stand up to answer with so many eyes upon them, and consequently, instead of answering, they are almost dumb. I would not recommend the discontinuance of the practice, when (as at Amesbury) the children do not mind it; but I would recommend that children who *feel* the ordeal should not be subjected to it without some previous habituation. I may add that I have seen no such effect in the one or two cases where the parents of children have found time to attend; a practice which, though most desirable, is hardly likely to become common.

Mutual co-operation of managers.

The harmony between the clerical and lay managers of schools seems in general to be excellent. In one or two cases, however, I have noticed, not outwardly a want of harmony, but certainly an absence of complete co-operation and mutual understanding, which acts or may act to the prejudice of the school in minor matters. It may well be that in no case has any real difference or difficulty arisen; but it is possible that there have been occasions lost of securing real advantage, or of doing greater good.

I have the honor to be, &c.

JAMES RIDDELL.

To the Right Honorable
The Lords of the Committee of Council on Education.

APPENDIX A.

SUMMARIES OF TABULATED REPORTS, FOR 1855-6, ON SCHOOLS INSPECTED BY REV. W. P. WARBURTON, REV. M. MITCHELL, REV. W. H. BROOKFIELD, REV. J. RIDDELL, REV. H. B. BARRY, REV. A. R. GRANT, AND REV. R. E. HUGHES.

Appendix B.

The King's Somborne School.

Vicarage, King's Somborne,
25 June 1856.

Dear Mr. Warburton,

The report to which you refer is quite correct; and the particulars you ask for are as follows:—In consequence of a communication from the Committee of Council objecting to the brick floor in the room in the cottage in which our infant school has been hitherto held, and requiring that it should be laid with boards, at the same time stating that "their Lordships

* The number of Schools inspected during the year was 193; but from 14 of these no sufficient returns of income and expenditure have been received.
† Exclusive of Government grants.

would be unable to count the infant scholars with the girls to decide on the amount of capitation and apprentices, unless this were done within a reasonable period," I called a meeting of the parishioners at the beginning of this year, and placed the matter before them, dwelling strongly on the importance and necessity of complying with their Lordships' requirement, and on the injury the schools would sustain by a refusal or neglect to do so. My statement was received by them very favourably; and it was immediately suggested by an influential ratepayer present, whether it would not be desirable, instead of *re-laying* the floor in question, at once to *build* an infant school-room adjoining the main building, (for which the ground originally conveyed affords ample space,) if sufficient funds could be obtained. I referred them to the Minute which engages, on the part of the Committee of Council, to supply half the outlay required, provided the conditions on which it is offered were fulfilled.

After some consultation on various plans suggested at that and on one or two subsequent meetings, it was finally decided to convert the present inconvenient mistress's house (which you will remember is part of the main schools), and the only class-room we have, which belongs to the boys, into an infant school-room and *two* class-rooms,—one for each school; and to build a *new* house for the mistress in the adjoining ground. To provide the necessary funds, it was *unanimously* agreed to by the meeting that a voluntary rate of 6*d.* in the pound should be collected through the parish; and that the ratepayers then present (about fourteen of the principal) should form themselves into a committee to carry out the whole object.

We procured plans and a specification of the proposed building from a competent architect, and they have been approved and accepted by the Committee of Council. The estimated cost of our contemplated work is 450*l.*, to be met as follows:—

	£	s.	d.
Sixpenny rate from *occupiers* of property in the parish calculated at - - - - -	125	0	0
Contributions from *owners* of do. - - - -	100	0	0
Parliamentary grant - - - - -	225	0	0
	£450	0	0

Our applications to both parties have been, with two or three unimportant exceptions, liberally responded to. There are many small and needy occupiers and owners of fields and cottages from whom, of course, we could expect no pecuniary assistance, and whose rates, trifling when taken singly, but of some amount in the aggregate, we did not include in the general calculation. I hope we are in a position now to ask the Committee of Council to sanction our commencing proceedings at once, as the time of year for building is passing away.

I believe with you that this is a remarkable instance of a parish so *almost unanimously* consenting to tax itself for school purposes; and I should not forget to add that the same ratepayers (at least sufficient for the purpose) have since also agreed to an extra 2*d.* rate for paying off the arrears in our school account of last year, for we are not at present, I regret to say, quite self-supporting as formerly.* I am assured that there is not another parish in this neighbourhood where such a proposition would have had a chance of acceptance, and that in this it would not have been listened to a few years ago. Do not think for a moment that I wish to assume to myself any exclusive credit for this change of feeling here. Various circumstances have combined of late years to conciliate the goodwill, and overcome the apathy and lukewarmness with which our principal farmers formerly regarded the schools

* At a meeting held on the 20th of February 1857, the parishioners again agreed to a voluntary assessment of 2*d.* in the pound for the purpose of defraying the deficiency in the school income of 1856.

and education generally. I have only been fortunate in giving *effect* to that altered state of opinion on the subject.

I shall be glad to give you any other information on the matter which I may have omitted and you may require. I will only add, that when you come to to us again, I hope you will find our infants rather better accommodated and disciplined than on the occasion of your last visit, and that there will be no need for the very just and well-founded representation you made as to our deficiency in both respects.

Believe me, &c.
(Signed) CHARLES NICOLL.

Appendix C.

Winkfield School of Industry, Windsor,
11 July 1855.

Reverend Sir,

I take much pleasure in forwarding for your perusal the following account of our school:—

The school stands in a piece of ground measuring nearly two acres, but the actual ground used for growing crops, I find, after careful measurement, to be 1 acre and 8 perches,—the remaining portion being taken up by the school-house, schools, and offices, two playgrounds, shrubberies, and the boys' gardens, &c.

The school was erected in 1835, and the building fund was augmented by a grant of 70*l.* from the Treasury; and, for some years after its erection, it was successful, inasmuch as the reports speak of an annual profit of from 5*l.* to 10*l.*, and the number of children in attendance fully equalled the number fixed upon by the founders of the school, viz., 100.

In 1841 Archdeacon Allen reported, "that the garden was in beautiful order, and the manner and appearance of the children much in their favour." (*See* Rev. H. Moseley's Report for 1849–50, page 10.) But in 1848–9, when the Rev. H. Moseley visited the school, he says, "The original promoters of the school are now dead, and I have to report, at a time when the formation of industrial schools is so much a matter of interest, that this is no longer efficiently conducted. The profits of the garden are, by the rules of the school, to be divided among the boys; but there are at present *no* profits. The parents, having been accustomed to look to a remuneration for the labour of their children, do not therefore send them to school. The number in attendance being now reduced to thirty, and there being only five boys in the school above ten years of age, and none above thirteen the ground cannot all be cultivated; and as that which has been cultivated has not for some years been manured, the produce does not repay the labour of cultivation." (*See* Rev. H. Moseley's Report for 1848–9, page 10.)

This state of things was much worse when I took the school in 1851, for the number was then reduced to sixteen, and not a boy in the school over ten years of age. I found the parents averse to sending their children to school to work, for, they said, they could teach them to work much better at home.

I then proposed to the committee that a class of children should be allowed to attend the school, and by paying a higher rate, should be exempted from all work, except at the expressed wish of the parents. The plan was tried in the winter of 1851–2; and so soon as the matter of work was made one of choice, the school filled rapidly, and the committee had to report that the school contained a larger number of scholars than it had done since its commencement in 1835.

Many of the boys paying the higher rate work regularly with the others, and they all do so occasionally, and always from choice. In fact, I have made it a favour now to be allowed to work in the garden; and as the boys who do not work have lessons during the work time, I find all anxious to work. I have never received any complaint from the parents on this account.

Some months after the trial of our new scheme, the Rev H. Moseley again visited the school, when he reported as follows:—

"Present 103. The school has much improved under the new master, as well in the learning of the children as in the garden work. There is an excellent opportunity for creating a model industrial school. The ground, however, wants manuring, and there are no tanks or out-buildings for stock." (*See* Rev. H. Moseley's Report for 1852–3, page 360.)

You will perceive that for some years prior to my taking the school there were no profits; indeed, by a reference to the school report for 1850, I find a deficiency of more than 8*l.* in the garden account.

In calculating the amount of profit from the garden, it must be borne in mind that our school will not bear comparison with any school in the vicinity of a town or near a railway station. We are compelled to grow such crops as the farmers will buy, simply because we have no means of disposing of table vegetables, which are much more remunerative than farming produce.

In the year 1852 (being the first entire year of my management) the committee state, "that they are enabled for the first time after an interval of many years, to announce a clear profit in favour of the school of about 5*l.*" This is in addition to the amount consumed by the master and his family.

The account for the garden since 1851 I should therefore state thus:—

	£	s.	d.	£	s.	d.
Profit in 1852 - - -	5	10	0			
Consumed by master and family -	5	0	0			
				10	10	0
Profit in 1853 - - -	7	13	7			
Consumed by master and family -	5	0	0			
				12	13	7
Profit in 1854* - - -	3	10	0			
Consumed by master and family -	5	0	0			
				8	10	0
Total profit for three years - -				£31	13	7

I have allowed 5*l.* for the consumption of myself and family, though I am certain this is somewhat too low.

A general statement would therefore be as follows:—

We cultivate about one acre, and pay a rent of 30*s.* The average annual profits for three years equal 10*l.* 11*s.* 2¼*d.* The children work three hours

* The profit for 1854 would have been much greater, but we lost most of our potatoes by the disease.

per day. In calculating the profits, rent, taxes, purchase of tools, repair of tools, and manure are deducted. Our crops are generally swedes, potatoes mangold wurtzel, parsnips, and carrots (for cattle).

2 July 1856.

Each of the boys received (if his attendance and conduct have been satisfactory) a reward, varying with the amount of profit and the state of the school funds. In addition to this, every boy in the school has, or may have, a small garden of 24 square yards; and the committee offer annually two small prizes of 2*s.* 6*d.* and 1*s.* 6*d.* each for the best cultivated gardens, which are inspected monthly. In awarding the prizes, preference is given to those who have shown the greatest skill in producing a variety of the most useful garden vegetables, with a regular succession of healthy crops and freedom from weeds; and, as the boys have the gardens entirely under their own management, this produces much useful competition amongst them, both in the selection of the crops and their management.

As the boys always take home the produce of their gardens, it is impossible to state with accuracy the exact value of their crops, but, upon inspection, I should suppose the standing crops upon the best managed gardens to be worth about 4*s.* For example,—

GARDEN No. 4.—ALBERT BOULT.

35 good cabbages, worth ½*d.* each - - -	1*s.*	5½*d.*
½ bushel garden beans, worth 2*s.* 8*d.* per bushel -	1	4
½ do. early potatoes, worth 4*s.* per bushel -	2	0
	4	9½

This garden has been well-manured, and its owner has obtained the first or second prize several years in succession.

GARDEN No. 1.—EDWARD MANKS.

The owner of this plot raises seeds, which he sells to his father. Upon inspection, I should value the crop as under,—

5 rows of onion seeds, 5 oz., at 4*d.* per oz. - -	1*s.*	8*d.*
A quantity of choice cabbage seed, which the owner values highly, if ordinary, worth about - -	2	0
	3	8

Some of the boys have actually produced earlier and better vegetables than their fathers at home, and they never fail to apprise me of the fact when such is the case. It is pleasing to watch the delight experienced by the young gardener of the first year when he cuts his first cabbage or digs his first potatoes to surprise the family at home with a dinner.

I have given up some of the best and most sheltered part of the garden to the boys to encourage them in their work.

In conclusion, I beg to state for the information of those who, though favourable to industrial schools in general, fear to form them, on the supposition that they would not be able to stand against the competition of other schools in the neighbourhood, that during the five years I have held the Winkfield School three others have opened without materially lessening our numbers. Two of these are in the same parish and one in the immediate neighbourhood; and in no case do the children pay more for admisssion than in ours.

I have the honor to be, &c.

The Rev. W. Warburton,
Her Majesty's Inspector of Schools.

(Signed) JOSEPH HODSON.

GENERAL REPORT, *for the Year* 1856, *by Her Majesty's Inspector of Schools, the* Rev. G. R. MONCREIFF, M.A., *on the* CHURCH OF ENGLAND SCHOOLS *inspected in the Counties of* NORTHUMBERLAND, DURHAM, CUMBERLAND, *and* WESTMORELAND.

MY LORDS, January 1857.

I ENTERED on the charge of this district on the 30th of August 1855. During the months of September, October, and November of that year, and for about six weeks at different times in 1856, I was engaged in Cumberland and Westmoreland; for the remainder of the year, down to the 31st of August, chiefly in Durham and South Northumberland. Within this period I inspected and reported on 183 school establishments (including 247 separate departments), seven of which were inspected twice. In these schools eighty-two certificated masters, thirty-one mistresses, five registered teachers, and 221 pupil-teachers were employed. The number of children present at examination was 19,951. I am, of course, unable to say anything as to *progress*, having seen each school for the first time. My sole aim, in this report, will be to state the actual impressions of my first year. The entire district contained, in 1851, a population of about 950,000, in an area of nearly three and a half millions of acres. But large tracts of country are all but barren in the Inspector's harvest. In the whole of Westmoreland, for example, (excluding Kendal,) there are but two certificated teachers. In the two extreme portions of Cumberland, *south* of Whitehaven and *north* of Carlisle, there is not one. I can travel from the Solway to the Tweed, with a wide margin on either hand, through the registration districts of Longtown, Brampton, Haltwhistle, Bellingham, Rothbury, and Glendale; and when I reach Berwick-upon-Tweed, its school is but the *fourth* under a certificated teacher that I have seen since leaving the immediate neighbourhood of Carlisle. Yet, thinly as the country is inhabited, I have passed through a population of upwards of 56,000. Of the greater portion of these regions, I know as little now as when I entered the district. There are a few schools in Westmoreland visited for "simple inspection," which give me some notion of the state of matters there; but of the hill-country of the Cheviots, and the south-west seaboard of Cumberland, I know absolutely nothing. Their population will enter into the statistics which I am about to submit; and single schools will take their places, individually, in my

Description of district under inspection.

lists; but of the general state of education I can give no idea, except by an emphatic silence. The rest of the district consists of two sections, which might be roughly described as the county of Durham, on the one hand, and the remaining portions of Northumberland, Cumberland, and Westmoreland on the other. But, as the great coalfield stretches across the Tyne, and as both sides of Tyneside, up to Hexham, are occupied by a population chiefly engaged in mining or manufactures, I find it convenient to add to Durham the registration districts of Newcastle, Tynemouth, Castle Ward, Hexham, and Alston, while I withdraw from it those of Teesdale and Darlington, as being chiefly agricultural. The section so composed I call A, or the *mining* section. The rest of the district—including the unexplored regions above described—is section B. In this, however, there are still left the mining population on the Northumbrian border and round Whitehaven, the seamen of Whitehaven, Workington, Maryport, and Berwick, and the manufacturing operatives of Carlisle and Kendal. I cannot pretend to make a perfectly accurate classification, but as an approach to it, sufficiently near for my purpose, I divide this section into B 1, or the *town*, and B 2, or the *country*, parishes. It will be seen that, in the tables which follow, I have referred almost exclusively to *annual grant* schools, *i.e.*, those having either certificated teachers or pupil-teachers, or both. I do not forget the large number of inspected schools of the other class, 108 of which I have visited this year; nor do I wish to depreciate their work. In many instances they fill very usefully a gap which could not at present be otherwise supplied. But nearly all of them occupy comparatively unimportant posts. The cases of real efficiency are very few, and *some* line *must* be drawn if I am to represent in these tables the real, rather than the apparent, state of education in the northern counties. I give, however, in Table I. the proportion of scholars, in all schools under inspection, to the total population and to the number of children between five and fifteen.

Statistical results.

TABLE I.—PROPORTION of CHILDREN at SCHOOL.

Total population (in 1851) of district under inspection.	Population between 5 and 15.	Estimated number of children at Church schools under inspection.	Proportion to total population.	Proportion to number between 5 and 15.
948,344	214,381*	21,583†	(about) 1 in 44 or 2·3 per Cent.	(about) 1 in 10 or 10 per Cent.

* Reduced from the "Education Return," to correspond with the *actual* instead of the *registration* counties.

† Allowing for 31 schools, not inspected, an attendance at the same rate as that of the 108 schools visited for "simple inspection."

Table II. shows the relative ages of the children to be found in the schools under inspection.

TABLE II.—AGES of CHILDREN at SCHOOL.

Estimated number of Children at Church schools under inspection.	Below 10.	Between 10 and 12.	Above 12.
21,583*	15,332†	4,045†	2,206†

These figures err on the side of excess, as I have taken the number present at examination instead of the average, which is much lower, and have then assumed the proportion of ages on *this* number to be the same as that given in Summary *a.* on the number *on the school-registers.* The older children being more irregular, the true proportion over 10 and over 12, would be considerably less. With all this allowance, it appears that (in round numbers) out of every 450 persons, about *one child* of 12 years of age, and *two* others between 10 and 12, are to be found at school.

In Table III. I give the distribution of "*annual grant*" schools in the different sections already described.

TABLE III.—CHURCH SCHOOLS receiving ANNUAL GRANTS.

Section.	Departments.					Children present at inspection.					Population.	Proportion of Schools.	Proportion of Scholars.
	B.	G.	I.	M.	Total.	B.	G.	I.	M.	Total.		1 for every	1 for every
A.	25	19	9	30	83	3,156	1,859	1,154	2,925	9,094	554,119	6,676	61
B 1.	15	15	3	4	37	1,784	1,223	249	613	3,869	140,218	3,789	36
B 2.	1	1	–	17	19	68	76	–	1,158	1,302	254,007	13,368	195
Whole District	41	35	12	51	139	5,008	3,158	1,403	4,696	14,265	948,334	6,822	66

In Table IV., the distribution of pupil-teachers under the same heads.

TABLE IV.—DISTRIBUTION of PUPIL-TEACHERS.

Section.	Number.			Proportion to Children.		
	Boys.	Girls.	Total.	Boys.	Girls.	Total.
A.	83	41	124	1 to 73	1 to 73	1 to 73
B 1.	51	27	78	1 to 47	1 to 54	1 to 49
B 2.	15	4	19	1 to 81	1 to 25	1 to 68
Whole District	149	72	221	1 to 65	1 to 63	1 to 64

* Allowing for 31 schools, not inspected, an attendance at the same rate as that of the 108 schools visited for "simple inspection."

† Assuming the per-centage of Summary *a*, in Appendix.

Some points in the foregoing calculations are accidental. As, for example, many "mixed" schools differ only in name from "infants," so called; and, again, many infant schools are worked under the care of the girls' mistress, in a class-room, and do not appear as separate departments. On such points, no minute inferences can safely be drawn; but there are some broad and trustworthy conclusions:—

1. It appears that for the same population, which in the *country* parishes supports *one* school, the *mining* localities have *two*, and the *towns* of the agricultural section have not much less than *four*.

2. Out of the same numbers which send *one child* to school in the country, there are *three* in the mining parts, and *five* in the towns.

Now, as no one will contend that the towns are *over-supplied* either with schools or scholars, it follows (with some slight deduction for schools under "simple inspection") that the provision for country parishes needs to be at least doubled, and that for the mining parts to be increased fourfold.

3. But, even in the towns, out of every group of seven or eight families, *one child* only is found in school; and if all the parents in a town parish of 3,500 souls were to begin to do their duty to their children, they would find (on the average) but one Church school with a certificated teacher, or rather but one *department* of such a school provided for their reception. Such facts seem to be their own commentary; and I beg to observe that every figure in *these* Tables (III. and IV.), except the census returns of population, rests on my own observation at the time of inspection. It is for this reason that I have given the numbers present on these occasions, rather than the average, which might be called in question.

4. There is great diversity in the proportions of boys', girls', and mixed schools, the last being to the whole number, (omitting infants) 40, 12, and 89 (I might say 100) per cent., in the three sections respectively. In other words, in the *country* all the schools are mixed;* in the *mining* parts, nearly *one-half;* in the towns, less than *one-eighth.* These mixed schools are (I think, without exception) under a master.

Mixed schools, and female education.

Economy and want of numbers are, perhaps, the chief, but not the only causes of this. In many places throughout the district, and in Cumberland almost universally, there is a preference for the master's teaching, for girls as well as boys, which is irrespective of both these considerations. To some extent it is well founded. No female teachers have yet been seen in those localities whose elementary teaching would bear

* The apparent exceptions are at Stanwix, which is virtually part of Carlisle.

scrutiny; and it was generally deficient in the very points on which the parents are, or think themselves, capable of judging. If this were all, I should be content to leave the evil to the sure remedy of time. I find, however, a similar feeling gaining ground among some of the best supporters of education. Some retain or have fallen back on uncertificated mistresses, while they keep up the full pupil-teacher machinery in the boys' school; others have united boys and girls in one mixed school under a certificated master; and others, again, are wavering and half inclined to adopt this latter course. Both courses, unlike as they seem, are based on one common belief,—that, you cannot find a high standard of general instruction united, under the same mistress, with a sound moral and industrial training of girls. Believing this, the one class of managers have given up the higher instruction; the others try to secure both by trusting to the master for the one, and to a sempstress specially engaged for the other. I fear I must admit in the former case the prevalence of another feeling which ought to be, but is not, obsolete; that, while boys may fairly be taught all that they have time to learn, it is better and safer for girls to be confined to a very narrow circle of knowledge. Even if this were so, it would still remain true that it must be good for their true *education*, to be brought under the influence of an educated mind. I mean—setting aside the question of mere knowledge—that girls need, for the formation of good habits of thought and action, the control of a superior mind; a control which is rarely—I do not say, never—exercised by an imperfectly-informed teacher. And who can look on the state of family life among the labouring poor in town or country, and not feel that, do what you can for our future labourers, all or nearly all is lost, if you do not give to their wives "a wise and understanding spirit"—the power of self-government—the habit of thoughtfulness and the sense of responsibility in the daily walk of life? To form this is no easy task to be attempted by any "respectable person" with good knowledge of needlework. It is a high and honourable work. Here and there, there are examples of persons highly gifted by nature with the particular power which it requires; persons of deep and simple faith, of clear common sense, and with a love of souls. Such teachers are rare; and [illegible] to them systematic training is far from superfluous. For others, such training is the only way of clearing the views, and strengthening the powers. Without it, they may be loved or feared, as the case [illegible] but very seldom, within my experience, do they do much towards forming the character of their pupils. As regards the subjects of instruction, the question is really settled by almost

universal consent. Our inferior schools differ from the best little or nothing in the number of subjects taught, something in the extent professed, but far more in the character of the teaching. If it be an evil to spend time in communicating unprofitable knowledge, it is chargeable not on schools where the mind itself is gaining strength from all it learns, but on those where it lies dormant while receiving dry facts to be simply a burden to the memory. There is, indeed, one condition on which I could gladly cease all controversy on this subject. I am almost ashamed to think how often I have heard it discussed with almost exclusive reference to domestic service; as if girls were to be considered only in relation to their usefulness! The *exclusive* reference I disown. But, undoubtedly, *one* great object of female education is to fit a girl "to do her duty in that state of life to which"—it is probable that—"it may please God to call her." I should be delighted to hear of industrial schools, properly so called, where girls should be taught the practical duties of a cook, housemaid, and laundrymaid, while still continuing their other studies. Of these, I am sorry to say, there is not one in the district; and few managers seem to be aware of the liberal aid afforded by your Lordships to efforts in this direction. On the other hand, it may be asked—whether mixed schools are sufficient or desirable for our girls? If education means knowledge, they are; if it means moral training, they cannot be. *Not,* as is often assumed, because intermixture of boys and girls is in itself objectionable. I agree fully with those who hold the attempt to keep them separate, and all elaborate arrangements for doing so, to be alike unnatural and futile. That school is most nearly perfect in moral discipline, which trains its children to meet on such terms as will be suitable hereafter for well-conducted young men and women associating with each other, "with all purity," in the various scenes of life. But admitting fully that no moral evil ought to arise from the constitution of a well-ordered mixed school, I must still ask, is a man, still more a young man fresh from a training school, fit to form the characters of girls? And, if not, is a sempstress, presumed to have no experience or love of teaching, likely, even if she tries (which it is no part of her paid duty to do), to succeed in gaining the influence on which all moral education depends? Thus, the mixed school *may* be a necessity, but is always an inferior arrangement.

New train-ing colleges.

Why, then, is the mixed-school system ever adopted without absolute necessity? I fear the answer must be—because it has been found so difficult to obtain really qualified certificated mistresses. This excuse—for which I must confess there has

sometimes been too much foundation—will soon, I hope, be removed. The plans for the Durham Female Training College, after long delays, are at last completed and approved. It is now a simple question, depending on a sum of about 500*l.*, whether the building shall be proceeded with at once. I hope that it will not be delayed another year, for want of a sum so trifling as compared with the wealth of the district. When this institution is in operation, I have no doubt that the supply of mistresses trained for the special wants of these counties will soon set at rest the question of the practical character of their teaching.

Supply of pupil-teachers.

I turn now to Table IV. In one section only, the *towns*, does the supply approach the limit allowed by your Lordships regulations. In the Durham and South Northumberland section the managers seem to have been unable to find eligible candidates to fill more than about *two-thirds* of the vacancies. It is not easy, in this matter, to arrive at perfectly safe conclusions. Numbers are, as it were, *lost* in the reckoning, when the average ranges between 50 and 80, or between 80 and 120; still more, when it falls below 50. Other disturbing causes can easily be suggested. But there are compensating circumstances on the other side; and, as all these difficulties in the calculation apply equally to schools of every class, the broad fact of the *difference* between the two sections must remain unshaken. Such cases as Bishopwearmouth, with its 211 boys and one pupil-teacher, or South Shields, St. Stephen's, importing its apprentices from Yorkshire and from Bishop Auckland, are sufficient to show that the difficulty is not imaginary. In the *country* section I admit that the tabular statement is, on this point, somewhat delusive. The four girls are, three at Stanwix and one at Norham; and as Norham School was (temporarily) closed as an annual grant school, there is here no true average. On the boys' side, the figures are correct. Yet, practically, the only places in this Section in which it has been found impossible to supply vacancies were Bellingham and Cleator. At other places, as Cargo, Lowick, &c., there had (up to the date to which the report goes) been no opportunity of presenting candidates since the appointment of the certificated master. On the whole, there is no serious difficulty, generally speaking, throughout the agricultural portion of these counties. There is difficulty almost everywhere in the mining neighbourhoods and in the seaport towns; in the latter it often amounts to an impossibility. The still more serious evil, however, is one which I cannot bring to the test of figures; I mean the *quality* of our candidates, which is grievously lowered by the scantiness of supply. The managers

have, generally, (as regards *boys*, at least,) little or no choice. There is one child for one vacancy; they have hunted far and wide to find that one, and no other is to be found. No doubt, in the records of the office, instances of rejection on the score of "insufficient numbers" are of no unfrequent occurrence. But, unfortunately, from the very nature of the case, the supply is greatest where the demand is least. The expense of board away from home is often a bar to transplanting, and so the village school, here and there, may be found groaning under a plethora of candidates, while the distant seaport is languishing for want of teachers. It is true, and it is a most important truth, that wherever the master or mistress has succeeded in gaining a commanding influence over the minds and affections of their pupils, it rarely happens that candidates are not forthcoming. Some striking instances of this truth have come under my notice. I may mention one, the village school of Crosby-on-Eden, where, in 1855, a candidate could with difficulty be found, and in 1856 there are three or four *for exportation;* while the very boy who declined to be apprenticed a year ago is now glad to go on, doing the full work of an apprentice without remuneration. But it is equally true, that in many cases, for reasons absolutely beyond the teacher's control, such personal influence is unattainable. Where children come and go so rapidly that first classes are changed in three months, or (as I have *seen* in a single case, Whitehaven, Trinity) are half changed within the space of a single month; or where, as at Deptford, St. Andrew's, the average age of the first class is below nine; or where the *average* attendance of each child is scarcely more than three days a week; in such cases, and they are in some localities more nearly the rule than the exception, it is hard to keep up the appearance of mechanical discipline; moral influence, except for very gifted teachers, is absolutely impossible. I do not trust much as yet to returns and averages; but some signs are unmistakeable. When a class of thirty requires a register for fifty, because fifty different children will have belonged to it, at one period or other of the quarter; and when this is true of every class in the school, there can be no mistake in inferring that the fluctuations in that school are enormous. Many such tests may be found, and they all lead to the same conclusion. Hardly any *class* of schools is free from this evil; though it meets us in many different forms, and of course in very different degrees. Here and there, a single school has escaped it: in almost every such instance, some strong personal influence is at work, either of landowner, or clergyman, or

both, or (more rarely) of the teacher himself. The effect of high payments, low payments, and no payments, on the attendance, I shall make a special subject of attention during the present year. Returning from this digression to the pupil-teachers, I can speak well of their conduct generally, so far as reported by managers, and as tested by the slight intercourse of an Inspector. There has not been, within the twelve months, any case of serious delinquency. *Six* boys and *one* girl have been withdrawn, as unfit for the occupation, and in one or two instances because the managers were not thoroughly satisfied with their behaviour. Intellectually, as I have said, we have no fair chance. The pupil-teachers apprenticed during the present year are, I think, quite as promising as their immediate predecessors; but I doubt whether either they or those just before them will, as a body, be equal to the Queen's scholars of 1856, or to those who will, I hope, follow in the same track in 1857. Time will show; and I shall be better able after a second view of each school to confirm or correct this opinion. One thing I feel very strongly; that an under-taught candidate has as little chance, generally, of becoming a valuable teacher as of reaching a high standard of knowledge. The boy or girl, who, after two or three years' absence from school, has been hunted up as a candidate, laboriously crammed for a few weeks, and with difficulty brought up to the very *minimum* standard for apprenticeship, seldom, if ever, so far recovers the lost ground as to be relieved from the burden of perpetual anxiety. The next examination is always "looming in the distance;" to the great injury both of learning and teaching. The lessons are *crammed,* and the teaching grows mechanical. I have not been able to trace any striking difference of character or ability between the pupil-teachers of different counties, or different classes of schools. The aggregate talent seems to be pretty equally diffused. In *general*, large schools *i.e.*, schools with an average attendance of 120 to 200, turn out better trained apprentices than small. To this, no doubt, there must be a limit; but I have no school on my list with more than six apprentices under one teacher.*

Queen's scholarships.

I cannot leave this subject without referring to the result of the examination for Queen's scholarships at Christmas 1856. Strictly, it does not belong to this report; but I am unwilling to let a year go by, before I congratulate the teachers and managers of the district on the encouraging features which it presents.

* Since writing the above, I have seen in the "English Journal of Education," (March 1857, p. 92,) the following statement:—"It is the experience of a large proportion of the managers of Church schools that pupil-teachers *are not answering the objects of their appointment.*"—I venture to say that, in this district, there is not one manager in twenty who will endorse that statement.

TABLE V.—QUEEN'S SCHOLARSHIPS in 1856.

—	Eligible.	Candidates.	1st Class.	2nd Class.	Failed.	Proportion per Cent.

I hope and believe that these facts show that our pupil-teachers are more in love with their work, and more alive to the advantage of thorough training. And, happily, this is a plant which "has its seed within itself;" each such instance of success gives confidence to the remaining apprentices in the same school; the first who goes out is almost always the pioneer for the others; and, as I have already found resulting from this examination, the *prestige* of the office of pupil-teacher is so raised in the eyes of parents that there are competing candidates for vacancies which it was previously impossible to fill. May I venture to add the gratifying fact, that four out of the first five on the *male* Queen's scholars list are pupil-teachers from this district, none of whom had resided in a training school before the examination? I think it only fair to the teachers with whom I am connected, who have their full share of the mortifications and discouragements of their calling, to make known throughout the district the very creditable success of their pupils. The four successful schools are,

None of the female candidates stood quite so high.

Changes in district.

In Table VI., I have submitted a view of the changes in the district within the year, or rather those which occurred between Mr. Stewart's last and my first inspection of each school. Many other changes have no doubt occurred; but as I can have no certain knowledge of the state of any school, except at the time of inspection, the only accurate return which I can make is that which accounts for each school at the date of my annual visit. It will be understood, therefore, both here and throughout the report, that no account is made of any gains, losses, or other occurrences brought officially to my knowledge since the 1st of September 1856, with the single exception of the Queen's scholarship examination.

TABLE VI.—CHANGES in YEAR ended at DATE of INSPECTION, in 1855–6.

—	1. New Buildings.	2. Certificated Teachers, for first time.	3. First Apprentice-ship of Pupil-teachers.	4. "Simply inspected" for first time.	5. Loss of Certificated Teachers.	6. Loss of Pupil-teachers.	7. Decline Inspection.	8. Transferred to Mr. Laurie's List.	9. Closed.
A.	Newcastle, St. Andrew's (*a*). Bishopwearmouth (*a*). Seaham Harbour (*b*). Hendon (*c, d*). Earsdon (*c, d*). Mickley (*c, d*). Corbridge (*c, d*).	Escomb (*d*). Ryhope. Stockton-on-Tees (Trinity) (*d*). Castle Eden. Chester-le-Street.	Leadgate. Winlaton. Collierley.	Whitburn. Haswell. Shotton. Burraton. Seghill. Barlow.	Spennymoor. Great Stainton. South Shields, Trinity.	Sunderland (Gray).	Heworth. North Shields.	Wylam.	Ovington.
B 1.		Shaddon Works, Carlisle (*d*). Brigham (Keswick).				Morpeth (Girls). Brampton.			
B 2.	Allhallows. Wetheral (*a*). Cotehill. Cargo (*c*).	Bellingham. Shoreswood (*d*). Lowick. Wreay (*d*).	Crosby-on-Eden.	Brough. Helsington. Flimby. Mowbray, St. Cuthberts. Abbeyholme. Aldoth. Bothel. Plumbland. Uldale. Blencogo.			Middleton in Teesdale. Mitford.		Kirkby Stephen. Norham. Casterton.

B 2.	4	4	1	10	—	—	2	—	3
Total	11	11	4	16	3	3	4	1	4

(*a*) New building in the room of an old one.
(*b*) Enlargement.
(*c*) With certificated teachers.
(*d*) With pupil-teachers.

New buildings.

5. The number of new erections is, I think, fairly satisfactory; seven out of the eleven being clear additions to the outward appliances of education. The buildings, are, in every case, good, and though one or two of them had no Government aid, the promoters have adopted (with slight variations) the plans sanctioned by your Lordships. It will be seen that they all belong to the *mining* and *country* sections, where, as I have shown, the need is the greatest.

Certificated teachers.

6. Including the *six** certificated teachers in new schools, we have altogether an addition of seventeen (fifteen masters and two mistresses) to our staff; a fair proportion out of 113. Against this increase are to be set the losses referred to in column 5, leaving a clear gain of fourteen on the year. Both at Spennymoor and at Great Stainton, I hope to report next year that the teachers have obtained certificates.

Pupil-teachers.

7. In connexion with column 3, I have no remark to make at present. Fourteen additional schools have received pupil-teachers, the number apprenticed in these schools being seventeen boys and four girls. The loss under column 6, as compared with the previous year, is three boys and two girls from four schools. Here also, it is only temporary, and, in one instance only nominal. At Morpeth, the girls' school has been united to the boys', under the charge of the master; at Sunderland and Brampton, pupil-teachers were refused on account of the badness of the building. In both instances, this cause will have been removed before my next report is presented.

First inspections.

8. In column 4, we have the "conquest from the waste," the schools which have opened their doors for the first time to the Inspector. Those in Section A. are chiefly in pit villages, and will, I hope, before long have certificated teachers. The less said about their present condition, the better for their credit; there are not more than three out of the eight departments which can fairly be called places of education; but they would not have come under inspection had there not been a desire to render them efficient. If I take them as samples of their class, they justify me in saying that the uninspected pit schools must be, for the most part, very unsatisfactory. The ten schools in Section B 2. includes three specimens of the Cumberland endowed school,—Plumbland, Bothel, and Uldale; the first of these is a *picked* specimen, standing high in endowment, in reputation, and in the ability of the master. I have no reason to suppose the others to be below the average; I believe them, in fact, to be above it. Again, therefore, I have a sample of the class from which they are taken, and on that sample must pronounce the class to be in reading,

* At Hendon, both the new teachers are certificated.

geography, grammar, and religious knowledge far below the mark of an average "annual grant" school; in writing. probably, rather superior; in arithmetic, less intelligent, but perhaps more accurate and more rapid; while the moral parts of education, such as discipline, order, &c., are all but totally neglected. The only favourable point, and this not in comparison with a good school of the other class, is the steadiness of individual working, at least among the very oldest children. The discipline of such schools, generally, I conceive to be severe and capricious. A good school-master in Cumberland has a hard task. The people deliberately prefer the old system, dislike the drill and discipline of the new, have unbounded faith in Walkingham and "ciphering books," and no faith whatever in moral training. By "the people," be it observed, I do not here mean, solely or chiefly the labourers, but the small freeholders and farmers, whose children attend the school, of which they are themselves very often the trustees. A good master will win his way in time, but he will get on fastest where least has been done before; and wherever old traditions are strong, he must win favour for his deeper work by proving himself equal to his old-fashioned predecessors or competitors in the mechanical skill which was their pride. It has yet to be seen,—I have no case quite in point,—whether if an *old light* and a *new light* master of about equal natural powers be established in near proximity, the public voice would in any reasonable time give the preference to the latter. Happily, however, the endowments are generally too small to allow the struggle to be long continued. On every vacancy, inferior men are succeeding to posts once graced by honoured names; so that the evil must bring its own cure; and, when once the tide has turned, the hard-headed Cumbrian intellect will assert its right, and make its county again, as it was once in reality, and still continues to be *in statistical returns*—but in those alone—one of the best educated and the most intelligent in England.

Organizing master.

The three schools I have named, together with Bolton and Allhallows, were placed under inspection through the influence of one very energetic educationist, Mr. George Moore, of London. Three of them, as well as the three in Abbeyholme parish, will be visited this year by the organizing master of the Carlisle Diocesan Board. His operations are for my next report; but it falls within this year's scope to record his appointment, and to express my belief that, in devoting a large share of their funds to this object, the Board have wisely weighed the immediate wants of the diocese. Their choice will, I believe, be found to have been very happy. I look forward with great hope to the effect of his intercourse with the

"statesmen" and others, in disarming prejudice, and translating into the vernacular tongue of the provinces the official English of your Lordships' Minutes and Inspectors' Reports.

Schools withdrawn from inspection.

Of the four schools in column 7, *three* had received Treasury grants. One only, Mitford, had been voluntarily placed under inspection by the late incumbent, and is withdrawn by his successor. It is satisfactory to find our "losses" so trivial. Of the "closed" schools, Norham and Casterton are now (February 1857) reopened. The two others are the only real losses.

Prize-scheme.

Among the facts of the year it only remains that I should mention the Northumberland and Durham prize-scheme; at whose first meeting, on the 30th of August 1855, I made my first appearance in the district. I do not think it necessary, on this occasion, to make a special report; and, indeed, I have hardly a right to do so, as the scheme is common to all inspected schools, and Mr. Laurie is equally associated with me in the examinations. On other grounds, however, I think it better to say but little at present. I insert in the appendix of this report (*vide Appendix* B.) the important parts of the first annual report, and have only to add that the scheme seems likely to be prosperous, though it is too soon as yet to look for evidence of its working. By another year we shall have had some real experience; and I may then venture to offer some remarks on the nature and amount of its influence.

Schools receiving annual grants.

I have said but little of the actual state of the "annual grant" schools. I am fairly satisfied on the whole; there have not been more than about half a dozen really unsatisfactory; but I wish for a second view of each school and teacher before I venture to trust my impressions. There are hardly any inspected night schools or industrial departments in the district. I wish there were more; but, while boys leave us at ten or eleven, the proper time for either can hardly be said to have arrived. The same may be said of "common things" and practical information in the ordinary school. The time does not come for it. It might be most useful to boys of riper growth; it would be mere play to the almost infants with whom we have actually to deal.

School-rate.

It is hardly possible, at this moment, to avoid some reference to the question of a rate. I have no wish to enter deeply into the discussion, for which this is hardly the proper place. But I cannot help saying that, *without* other measures (which I shall mention immediately), a rate would do us but little good, and that *with* those measures it would be needless. Apart from all objections, it would not meet the most crying evils. It professes to provide us with school-buildings, and to maintain schools, universally, cheaply, and with fairness in the distribution of the burden. Supposing all this done,

real education would be but little advanced, if the buildings are to be filled, and the high-trained teachers occupied, with little children for short and broken periods of attendance. Again (speaking still of this district alone), I do not perceive any *necessity* for the rate. In most parts, there would be schools enough, or nearly so, were all that there are but worthy of the name. Improve the quality, enforce attendance, restrain the demands of labour, and (to say the least) it has yet to be shown that the extent of school accommodation would be seriously deficient. In Cumberland and Westmoreland, it would be ample; in the mining parts it would soon become so, and I do not believe that the other portions would long be left behind. Nor does this imply a large increase of expenditure. The existing schools, bad as they are, are on the average, very nearly, if not quite, as costly (reckoning all sources of income) as good schools need be. It cannot be denied that a rate, and a rate alone, would secure fairness in the distribution of the burden; but the price which must be paid for this gain seems to me to be beyond its value. I do not dwell on innumerable difficulties of detail, which would be overlooked as trifles in discussion, but would be found in practice weightier than any speculative objections. I barely mention what I believe would be a lasting and serious hindrance to the operation of the rate, viz., its extreme unpopularity with the mass of ratepayers. The more prominent objections are these three:— Objections to a rate.

1. The tendency to take the management from those who do, to give it to those who do not, care for education.
2. The introduction of perpetual agitation and discord.
3. The tendency to banish from our schools all definite religious teaching.*

The first evil can only be met by leaving the management where it is, in the hands of committees of subscribers, supplying them with funds in aid from the rates, under fixed and unalterable regulations. Here, I think the dilemma meets us; if the ratepayers have no efficient control over the expenditure, we lose the economical advantage of local management; if they have such control, the sure result must be in the long run, that their controlling power will gradually draw to itself the practical authority in all things. No body of subscribers, still less any individual promoter, will long contend with a

* On each of these points we may be told to look to the example of Scotland, where certainly (whatever else is wanting) *these* results do not follow from the operation of the rate. I reply that there are these broad distinctions:—(1.) The ratepayers in Scotland are land owners, not occupiers. (2.) The teachers hold their office during life, or, at least, during good behaviour. (3.) There are hardly any *theological* differences. (4.) Last, not least, there the rate is an old well-rooted system, not (as it would be here) a new and untried experiment.

committee of unfriendly ratepayers. On the other hand, no body of ratepayers will be content to pay money for other persons to administer. It is in vain to reply that these are evils incident to all popular government. In other matters, the personal interest of every man is involved in the course adopted, and this interest gives him his claim to be consulted, while it checks the abuse of his share of power. When his interest is, or seems to be, distinct from the work to be done, as in sanitary measures (of which he may not see the value), or the relief of the poor (of which he may grudge the cost), it has been found necessary to restrain or stimulate local action by very stringent central control. In education, we have a subject very open to agitation, and there is no evidence whatever that the majority of those who would have to deal with it, feel any interest in its advancement, or have any enlightened views of its nature. To suppose that a topic so tempting to the mere agitator, so attractive to the sincere leader of a local party, has any chance of being left to the quiet convictions of parents or philanthropists, needs (in these counties at least) more faith than I at present possess. It is hardly correct to say that these evils would cure themselves, that experience would correct unsound management by the badness of the schools so administered. For, unfortunately, we differ not merely as to the means, but still more as to the end, of education. And the things sacrificed would be the most precious, but the last to be missed; not so much *knowledge* of any kind as moral training, the true *education* of the child.

Religious teaching.

Still worse will be our fate if (as seems the tendency) the advocates of a rate are driven for the sake of union to restrain in all rate-aided schools the liberty of religious teaching. I should be quite content to leave catechisms and distinctive formularies to be taught by ministers of religion, or at Sunday schools; and I would earnestly contend for the parent's right of withdrawing his child from doctrinal instruction with which he does not agree. When all this is granted, the real question remains, which is in no sense sectarian or denominational. No doubt, it seems a small matter, to confine religious teaching to one fixed time. But, unless the teacher is to be forbidden to deal with his pupils, at other times, on the basis of religious truth, nothing seems to be gained by the restriction; and if he is so forbidden it will often be impossible for him to deal honestly with matters of moral discipline. Many cases will arise, in which he must speak at once, if he is to speak with effect; and in which he must appeal to disputed religious principles, if he really believes them to be true. If true, they are practical; to assume that they can be dispensed with in practical education, is really to assume that they are

visionary. I do not deny that moral training *may* be sound, so far as it goes, in the hands of those who disjoin it from all doctrinal views, and may be substantially the same, under many forms of theological opinion. But how my neighbour is to combat moral evil, is not my concern. Whether his moral tone is as deep as mine, or deeper, it is not for me or for him to determine. It is enough for me to know that my own teaching can be neither sound nor deep, if I do not follow out my own belief. It would be bigotry in me to refuse him aid in giving secular instruction, unless he will give with it my views of moral duties and dangers. It is bigotry quite as narrow for him to insist on my keeping in the background, what are in my mind, the most immediately practical truths which a child needs to learn. Let him set up schools on his own principles, or withdraw his children from religious instruction; but if I, believing the Gospel to be strictly the *life* of man, desire to teach morality to children on the foundation on which I build my own, who shall say that this, and this alone, disqualifies me for public support? Let me add that, practically, I have never found the slightest difficulty to arise from the intermixture of children of different persuasions, nor could I easily name a single school of any importance where full liberty of conscience is not conceded.

Compulsory education.

Still, there is room for legislative interference. First, the endowed schools need thorough and peremptory re-adjustment. We also very much need to have either the principle of the factory half-time Act, or something better, applied first to our mining population, and then, if possible, to all. I do not much care in what form the principle is applied; whether by enforcing two days a week at school on all pit lads under thirteen, or by extending the *minimum* age for employment from ten to twelve, or by requiring some proof of rudimentary instruction, before a child is allowed to go to work. The second mode, if coupled with a proviso requiring attendance at some inspected school for three years previously, would, I think, do more than the first for his real education, and would also be more acceptable to the coal-owners. But, indeed, it is from the coal-owners themselves that the proposal ought to proceed. Several of them do much for education, and the number is increasing. I hope that they will forgive me if I close this report with the emphatic expression of my opinion, that, with all our talk and trouble, when we have each done our part,—Committee of Council, Inspector, coal-owner, manager, or master,—be our work ever so well done, the results are utterly insignificant; we have an elaborate and expensive machinery wasted on little children, too young for permanent impression. Our con-

sciences are not cleared from responsibility by the sums spent on school buildings and teachers' salaries. Larger and sterner sacrifices are needed; or at least, we need the spirit which will prepare men to make such sacrifices. It may be, though I do not believe it, that to keep children longer at school would interfere with the labour market. If it be so, or if the point be doubtful, it is surely worth while to balance pretty carefully the nation's interest in an educated people, against the nation's interest in prosperous trade. I do not believe that the two interests are in real antagonism. But all that falls within my province is to protest against the supposition that it is possible, under present arrangements, to provide for the first and higher of the two. There may be no desire for any change on the part of the parents of these children. It may even be probable that, were the coal-owners prepared to support a half-time measure, they would be opposed by a large proportion of the very persons for whose benefit it was intended. Such difficulties will be overcome in due time, whenever the attempt is made in good earnest. At present, the great point seems to be to make clear to the minds of the coal-owners the fact of the crying necessity for such an effort. It is vain to build schools with one hand, while with the other they tempt away from these schools the proper subjects of tuition. We thank them heartily, as educationists, for the school-room and the teacher; but our thanks will be tenfold heartier when they restore to us the children whom labour had no right to claim.

I have the honor to be, &c.

G. R. MONCREIFF.

To the Right Honorable
The Lords of the Committee of Council on Education.

APPENDIX A.

SUMMARIES OF TABULATED REPORTS, FOR 1855–6, ON SCHOOLS INSPECTED BY REV. G. R. MONCREIFF.

APPENDIX B.

NORTHUMBERLAND AND DURHAM PRIZE-SCHEME ASSOCIATION.

OBJECT AND RULES.

THE object of the Association being to encourage good conduct and regularity of attendance in the schools in union with it, by means of a prize-scheme, to be extended to all schools which are placed under Government inspection in the counties of Northumberland and Durham, whether in connection with the Church of England or not, it is proposed to give prizes to such boys and girls as shall appear to Her Majesty's Inspectors of Schools

* The number of Schools inspected during the year was 190; but from 52 of these no sufficient returns of income and expenditure have been received.

† Exclusive of Government grants.

and to the Committee of Management to be deserving of reward; and also, under certain regulations specified below, to boys who have left school and gone to work.

Every candidate must be furnished with a certificate as to *religious knowledge, conduct, character*, and *attendance at school*, both on week-days and Sundays.

The secretaries of the Association shall transmit to the master or mistress of every school in union with the Association the requisite forms to be filled up, which must be returned to the secretaries at least ten days before the examination.

Any school under Government inspection may be placed on the list of the Association, by the managers of the schools signifying to the secretaries their assent to the rules of the Association, and paying a subscription of 5*l.* to the fund, which subscription shall be due on the 1st of January in each year.

N.B.—A boys' and girls' school, under the same management, are considered as one school.

Boys and girls will be admitted as candidates, according to the following regulations:—

Class I.—Prize of 1*l.*

Candidates to be boys or girls who can produce certificates—

1. That they have attended for two years, and are still attending, some school approved by the Association and now under Government inspection.
2. That they have completed their tenth year.
3. That their character and progress in religious knowledge are satisfactory.

N.B.—A year's attendance at school will be understood to mean that the scholar has attended at least 176 days in the year.

Class II.—Prize of 2*l.*

Candidates to be boys or girls who can produce certificates—

1. That they have gained the preceding prize.
2. That they have continued to attend school regularly.
3. That their character and progress in religious knowledge continue to be satisfactory.

N.B.—This prize may be gained in each successive year until they leave school.

Class III.—Special Prizes, to be gained by Competition.

Candidates to be boys or girls, qualified as above for Class II., who can produce a further certificate, 4, that their progress has been such as to give their teachers reason to hope that they may acquit themselves well in the higher examination.

There will be eight special prizes in the present year:—

Boys.	Girls.
1. For reading.	5. For reading.
2. „ Arithmetic.	6. „ Arithmetic and geography.
3. „ Composition, writing, and spelling.	7. „ Composition, writing, and spelling.
4. „ Geography.	8. „ Needlework.

Class IV.—Prize of 5*l.* for boys who have left school and gone to work

Candidates to be boys who can produce certificates—

1. That they have gained the preceding prizes (Classes I. and II.)
2. That they have completed their thirteenth, and have not completed their sixteenth years.

3. That they are employed by some member of the Association.
4. That their character is good.
5. That they have attended some drawing school or evening school, as well as some Sunday school, since leaving their day school.

Class V.

In special cases, to be determined by the examination of Her Majesty's Inspectors of Schools, exhibitions will be awarded to assist deserving candidates to attend schools capable of educating them as mining agents, surveyors, &c.

All working details will be regulated according to the wants of the district by the Commitee of Management, in concert with Her Majesty's Inspectors of Schools.

Subjects of Examination for 1857.

	Reading.	Writing and Spelling.	Arithmetice.	Geography.	Needlework.
Class I. (Boys)	To read fluently and intelligently a passage from the "Irish Third Book."	To write in a fair hand, with correct spelling, a passage given out by dictation.	The first four rules, simple & compound, Reduction, and easy sums in Practice and Simple Proportion.	Definitions. General Outlines; with Coast-line, Mountains, and Rivers, of England.	
Class I. (Girls)	Do.	Do.	The first four rules, simple & compound.	Definitions and General Outlines.	A piece of plain Sewing, to be judged of by a Ladies' Committee.
Class II. (Boys)	Do.	To write from memory the substance of a short story read to them.	Practice, Proportion, Vulgar Fractions, and Decimals.	Full knowledge of the six N. Counties.	
Class II. (Girls)	Do.	Do.	Same as Class I. with Reduction.	Same as Class I.	Same as Class I.
Class III. (Boys)	Do.	To write a short account of some familiar object or recent incident.	Same as Class II. with Compound Proportion and Simple Interest.	Geography of England.	
Class III. (Girls)	Do.	Do.	Practice, Vulgar Fractions, and Simple Proportion.	The six Northern Counties.	Same as Class II.

Report.

On Saturday, August 2, 1856, a meeting of the friends of education in this district took place in the Assembly Rooms. The attendance, though not numerous, was highly respectable, and amongst the company were—The Right Hon. Lord Ravensworth, one of the vice-presidents, in the chair; the Hon. and Rev. F. R. Grey, Rector of Morpeth; the Hon. H. G. Liddell, M.P.; George Ridley, Esq., M.P.; the Rev. G. R. Moncreiff, one of Her Majesty's Inspectors of Schools; the Rev. the Vicar of Newcastle; the Right Worshipful the Mayor (R. P. Philipson, Esq.); the Rev. M. H. Heron, Vicar of Heddon-on-the-Wall; R. Plummer, Esq.; R. W. Hodgson, Esq., North Dene; J. C. Stevenson, Esq., South Shields; Nicholas Wood, Esq., &c., &c. Letters were received from the Hon. and Rev. J. Grey, Secretary,

of the Association, and from J. S. Laurie, Esq., one of Her Majesty's Inspectors of Schools, expressive of their regret that they were unable to attend.

The Rev. G. R. Moncreiff read the following report :—

"My Lord and Gentlemen,—Your Committee have much pleasure in being able to assure you that the results of the first year have been most encouraging. The first examination was held at Newcastle and Bishop Auckland, on the 15th and 16th of May, by the Rev. G. R. Moncreiff and J. S. Laurie, Esq., Her Majesty's Inspectors for this district. The detailed results are given in their report as follows :—

	At Newcastle.	At Bishop Auckland.
There were, in all, 98 boys, viz.	75	23
And „ „ 40 girls	32	8
Total 138	107	31
Of these, prizes were awarded to	55 boys or	56 per cent.
And „ „	19 girls or	47 „
Total	74	53

"To this we have only to add a tabular view of the ages and condition in life of the successful candidates :—

TABLE I.—SUCCESSFUL CANDIDATES.

Aged.	Boys.	Girls.	Total.	Proportion per cent.
10	5	1	6	8
11	14	3	17	23
12	13	5	18	$24\frac{1}{3}$
13	14	7	21	$28\frac{1}{3}$
14	8	0	8	11
15	1	2	3	4
16	0	1	1	$1\frac{1}{3}$
Average Age	Yrs. Ms. 12 6	Yrs. Ms. 13 2	Yrs. Ms. 12 8	—

TABLE II.—SUCCESSFUL CANDIDATES.

Children of	Boys.	Girls.	Total.	Proportion per cent.
Pitmen	7	1	8	11
Labourers	15	11	26	35
Other Operatives	23	4	27	$36\frac{1}{2}$
Schoolmasters	4	0	4	$5\frac{1}{2}$
Others	6	3	9	12
Total	55	19	74	—

"It would be premature, at this early stage of our operation, to express any decided opinion on the probable effect of the scheme. We must wait for a year or two before its influence can be distinctly traced. But we may venture to say that a good beginning has been made; in every school which has sent candidates, very great interest has been excited among the children;

and in a few instances, even already, a child has been kept at school for another month or two, in order to become a candidate. We are persuaded that though a prize-scheme will never wholly prevent the early withdrawal of children from school, it only needs to be heartily supported to act here as it has done elsewhere, as an encouragement to wavering parents, and a continual protest against the grievous fault and folly of sacrificing to the gain of the moment the child's intellectual growth as well as the hope of its moral worth and self-respect. A second report has been received from the examiners, which it is not necessary to lay before you, since their recommendations have in substance been adopted by your committee, and are now in our name to be submitted for your approval. Though they relate entirely to matters of detail, yet they are so important to the working of the scheme, that we think it right that they in their main principles should be sanctioned by the general meeting.

"*First*, We think that for future examinations there should be a higher and more clearly defined standard. In the outset of our undertaking, it was almost necessary to make our prizes very easy of attainment. The whole scheme was so little understood—the children were for the most part so unused to the kind of examination—that any other course would have discouraged those whom we wished to stimulate. These reasons will not apply to future examinations; and we should obviously be effecting very little, if our prizes could be gained without real work and steady attention, on the part both of teachers and scholars.

"*Secondly*, We have considered the question of age; and here, also, we are of opinion that we must take higher ground. At present, our first year's prize is given at ten years of age. It seems clear, from the very object of the Association, that we must raise the minimum age, if we are to apply any check to the evil against which we are contending. On the whole, however, we are of opinion that it is not expedient to make any change at present. Our scheme is still in its infancy, and perhaps the time has hardly come for taking up higher ground, more especially as it appears from Table I. that very few children under eleven have this year received prizes.

"A *third* and very important point is referred to in the second table already given. No rule having previously been passed on this subject, every child has this year been considered eligible, who has attended the requisite number of days, without regard to his parentage or condition in life. Looking, however, to the object of the Association, it is obvious that those only are proper recipients of our prizes, whose parents are in the strict sense of the operative class, *i.e.* dependent wholly or chiefly for their livelihood on manual labour. It is hardly possible to lay down an exact line of distinction, but we feel sure that it will be enough to embody this principle in a general form in our rules, and that every manager of a school in union will then carry out its spirit more perfectly, and with more substantial fairness than could be done by any formal resolutions.

"It only remains to mention one other suggestion of the examiners. They have felt that, even after the standard of examination has been raised, it will still be necessary to keep it so low as to admit of prizes being gained by every child, even of moderate capacity, who has been regular and diligent at school. It must, therefore, be such as will offer little or no stimulus to the cleverest and most advanced pupils in each school. To meet this, it is proposed to give a small number of special prizes, to be gained by competition, after a fuller and more searching examination than that applied to the mass of candidates. Possibly, among our friends there may be some who would feel it a pleasure to place at the disposal of the committee one or more such prizes. It would be a graceful offering to our cause; and, as a token of personal good will, would, we are persuaded, give additional value to the reward so conferred. That reward, should, we think, be of the honorary kind, such as a medal, in addition to the ordinary prize; and the candidates should be qualified in all respects for the regular second year's competition.

"We cannot conclude without expressing our regret that the honorary secretary and founder of the Association, the Hon. and Rev. John Grey, is unable from ill health to to be present at this meeting. The two counties owe him hearty thanks for his exertions in this good work; we are sure that he rejoices with us in its present prosperity, and we hope that whenever he is able to resume his active duties he will find that it has not suffered from his absence. So far, we have every cause for hope. But we cannot too earnestly impress upon the meeting, that, if our Association was worth starting, it is worth supporting, and if worth supporting at all, it is worth supporting vigorously and in good earnest. 'The more,' say both Her Majesty's Inspectors, 'we see of these counties, the more do we feel the necessity for some strong educational stimulus; the more serious does the danger appear, if whole generations are allowed to take their places in the ranks of our workmen, with no education beyond what can be received and retained by little children one stage removed from infancy.'"

GENERAL REPORT, *for the Year* 1856, *by Her Majesty's Inspector of Schools, the* Rev. H. LONGUEVILLE JONES, M.A., &c., *on the* CHURCH OF ENGLAND SCHOOLS *inspected in* WALES.

MY LORDS,

Preliminary remarks.

I HAVE the honor of laying before you my annual report on the schools which I have inspected in Wales between 31 August 1855 and 31 August 1856. I visited 179 different schools,—boys', girls', mixed, and infants',—comprised in 126 distinct establishments, and the general result will be found recorded in my Tabulated Reports. They will be found satisfactory in the main, though, if the circumstances of each school could be fully known, still more if the educational wants of the greatest part of my district could be considered, there would be found arising from them many topics for serious and anxious deliberation, and, as I think, for increased legislative aid. It is with some pain that I find myself beginning to despair of seeing anything notable done with regard to the following points:—1. School buildings; 2. Schools of design; 3. Schools of navigation. My previous reports have touched upon these points so frequently; I have so constantly brought one or other of them forward in my communications with school managers and the friends of education in my district; and I am so fully aware of the futility of my attempts to awake public attention to the necessity of improvement in them; that I might well pass those subjects over in silence, now and for the uture. I feel it, however, to be my duty still to express to your Lordships an earnest conviction that, (1) with regard to school buildings, considerable waste of public money is still caused by faulty and extravagant plans, as well as by improper modes of construction; (2) with regard to schools of design and instruction in art in Wales, little or nothing will ever be effected under the present system of encouragement: (3) with regard to schools of navigation, one of the most urgent wants of the country and one of vital importance to the nation, the absence of aid may make its fatal effects felt at some future period of national disaster, when it will be too late to remedy that amount of evil which a few hundreds of pounds per annum might now tend to prevent. I do not mean to say that these deficiencies are peculiar to Wales; but I am bound to limit my observations to experience gained in my own district; and in so doing I cannot refrain from once more earnestly recommending them to your Lordships' attention.

The operation of the capitation-fee system is successful in my district, though I am surprised that it should not be more so; and I attribute this, in some degree, to the faulty arrangements and erroneous notions of school management not uncommon among school committees. Where managers act with the same courage and good sense that they show in the affairs of ordinary life, the result of the capitation test is almost always a gratifying one. Several schools are adopting the system of premiums for frequent attendance; and if the agricultural necessities of the country were taken into consideration by the Committee of Council, and capitation payments were allowed upon *quarterly* instead of *annual* attendance, the objects proposed by the Legislature in granting this aid to schools would be more generally and more equitably attained. Last year I was indebted to the Venerable Archdeacon Wickham for a detailed account of the working of his premium system; and this year I am able to select, from among several others, the case of Fishguard National school, as one where the premium system operates beneficially. The following ticket is issued to every child attending the school, for the information of their parents and friends:— Capitation grants.

PREMIUMS.—FISHGUARD NATIONAL SCHOOLS.

To the boy or girl who shall have attended school the greatest number of days from 17 June 1855, to 17 June 1856,—

	s.	*d.*
1st - - - - -	6	0
2nd - - - - -	5	0
3rd - - - - -	4	0
4th - - - - -	3	0
5th - - - - -	2	0

To five more one shilling each.

(Signed) L. M. HARRIES, Manager.

An interesting proof of the good manner in which this has worked is to be found in the fact, that the first premium of 6*s.* for the year 1856 was carried off by a little girl only ten years of age, who, though living a mile and a half from the school, was present in its walls for 234 full school-days. There were eighty-six children who gained the capitation fee, and the grant made to the school on this account was 20*l.* In another excellent but smaller school, that of Llantrisant, in Glamorganshire, 102 children gained the capitation fee, and entitled the school to a grant of 25*l.* 10*s.* on this account. At Mold, in Flintshire, 80 children gained 22*l.* 3*s.* Instances like these show what may be effected when school managers are energetic and possess habits of administrative ability.

It gives me great pleasure to call your Lordships' attention to an admirable address to parents from the teachers of Swansea National school, in which the duties of parents and friends Address from teachers of Swansea National school.

towards schools and children are laid down with an earnestness and depth of feeling highly honourable to its promulgators. It will be found appended to my report. (*Appendix* B.)

Children's payments.

The question of payments still causes discussion in my district, and therefore, though my own opinions on this subject have been often expressed, and remain unchanged, I am induced to give the following tabular result obtained in one of the most successful schools in Wales,—Whitford, in Flintshire. The locality is chiefly agricultural; there are no manufactures carried on in it, but a little mining; and wages do not rise there above the common average of the county :—

There are on the books - - -	70 boys.
" " - - -	30 girls.
	100
Children whose parents do not earn more than 12*s.* per week :—	
Who do not write on paper, and pay 2*d.* each per week - -	9
Who write on paper, and pay 3*d.* - " - -	23
Children whose parents earn more than 12*s.* per week :—	
Who pay 3*d.* per week each - - - - -	48
Who pay quarterly, at higher rates - - - -	20
Total - -	100

Whitford School, 18 *April* 1856.

Needlework system at National school of Dafen Tin works.

Many benevolent ladies connected with schools have complained to me of the difficulties attendant on the needlework system, which forms so essential a part of female education. I am indebted to the managers of the Dafen Tin Works National school for an excellent scheme adopted by them, which has now been some time in operation, and is attended with gratifying results. It will be found appended to my report (*Appendix* C.), and is well worthy of consideration by the managers of all schools connected with towns or with manufacturing populations.

Colonel Pennant's school in Caernarvonshire.

During the past year I have had the opportunity of becoming more intimately acquainted with an excellent set of schools, established for a most remarkable population, and supported with liberal, I might say noble, generosity. I allude to those maintained by the Hon. Colonel Douglas Pennant, for the children of families connected with the Penrhyn Castle estate and slate works, in Caernarvonshire. Six large schools, perfectly found in all requirements, superintended by very able teachers, and accommodating nearly 800 children (there were present at my several inspections 284 boys and 336 girls), are maintained by this gentleman. The intellectual results are exceedingly good; and these schools form a worthy appendix to the whole social system of the slate-quarry

population, who are better off in every respect than any corresponding class of persons in Wales—perhaps in Great Britain.

General progress of education in Wales.

On calmly reviewing the general condition of Wales, with regard to benefits to be derived from the Parliamentary grant administered by your Lordships, I cannot but lament that so large a portion of this district should have so small a prospect of sharing in them. It is all very well to say that country parishes *ought* to come up to the level of certain theoretical requirements, but practically they may be unable, and if not unable they may be too sluggish, or too ignorant, to do so. I admit that many of the remotest districts might do much more than hitherto towards helping themselves in the way of education; but, after allowing for the more favourable cases, there must always remain in Wales a large number of parishes where the physical difficulties of distance and impracticable ground, with a widely scattered population, will render the maintenance of schools, such as would come within the reach of existing regulations, impossible. There is, I believe, a very strong impression amongst the gentry and clergy of Wales that the cases of mountain parishes should be legislated for separately, and that it is a practical denial of Parliamentary aid to subject such districts to conditions framed for towns and prosperous villages. It seems to me that a plan recommended some years ago by the Rev. W. Edmunds, late Vice-Principal of the Caermarthen Training College, and mentioned in my report, for apportioning a small farm to the schoolmaster of a parish such as I have just alluded to, would be one of the readiest ways of removing the pecuniary difficulties that beset this class of schools. If the landowners of any given parish would agree among themselves, and consent to let out five acres of ground at the lowest market rate of the district to the schoolmaster, then if the Government would meet the parishioners half way with a grant for buildings, fittings, &c., and would relax the capitation rules for children under such difficulties of position, I conceive that a very considerable number of parishes would avail themselves of the advantages thus to be held out, and would do their best towards providing themselves with sufficient schools. As the case now stands, not one-fourth of the parishes of Wales are receiving annual assistance from the Parliamentary grant; and if things are allowed to go on as they are, their inhabitants will prefer remaining passive, and will let education schemes pass over their heads unheeded. But this is not the way to promote the moral and intellectual advancement of people not naturally prone to help themselves; they require words and deeds of

encouragement, and above all that the stiff formalities of Anglo-Norman laws and regulations should not be applied with too rigorous uniformity to Celtic minds, a course that will never overcome the inertness and passive resistance of the Welsh people. But, even should school-houses be erected in all parishes capable of supporting them, there must still remain a class of parishes—alluded to in one of my former reports—wherein no villages properly so called exist, where the houses are scattered over distances too great to be overcome by young children, and wherein the schoolmaster *must* go to the scholars, because the scholars *cannot physically* come to him. I am fully persuaded that a riding or walking schoolmaster, circulating regularly through his district, is the only kind of teacher permanently adapted for such peculiar localities. The expense of a building might perhaps be saved, and the proper support and remuneration of the teacher would be almost the only educational burthen on the parish. I believe there is no doubt that the farmers and other inhabitants would willingly take their turn in lending rooms for such a circulating teacher; and, though the plan may be considered ludicrously insufficient by urban or lowland educationists, who know not what mountain life is, and anomalous as it may appear, yet such a kind of instruction is certainly better than none. It may, however, I am persuaded, be made more efficacious than can be supposed by those who have not had occasion to turn their minds to the subject. If the inhabitants of the wild districts round Snowdon or Arran Fowddy, or Plynlimmon, or the Mynydd Epynt Hills, the Beacons of Brecon, the Caermarthenshire Vans, the ridge of Precelly, &c., could be polled upon the subject, they would hail with gratitude such a cheap and ready way of meeting their educational wants.

Want of properly qualified teachers.

There is still a great defect in the machinery of schools—at least, as far as my own district is concerned—which the well-intended measures of the Committee of Council have hitherto failed in making good; I allude to the supply of qualified teachers. So great is the inconvenience felt by school managers in this respect, that I am sure of having all the country with me in supporting my representations to your Lordships. The *supply* of teachers is too small, and the *kind of teacher* supplied by the training schools is not so satisfactory as it ought to be. This evil—for it is an evil—may be traced back to the first starting of the school apprentices. Young lads are brought forward by their friends, their school managers, and their school teachers, very often from erroneous notions and from mistaken kindness; young women are apprenticed in the face of the preponderant probability of their marrying as soon

as possible, and of ceasing to be school teachers at the earliest moment. Supposing that an apprentice distinguishes himself more than ordinarily in his periodical examinations before the Inspector, and that he has a good chance of obtaining a Queen's scholarship, he will very commonly go to an English training school, and will not return to the old country. When a teacher comes from his training school it is too often found that he is in reality far too young, and that he is an indifferent teacher; he has been more anxious about studying with a view to obtaining a place in the Class List than about qualifying himself for the practical duties of his future calling. It is a growing conviction among school managers, and it has long been my own, that the officers of training schools do not pay sufficient attention to the exercising of their students in practical teaching—the place in the Class List seems to be the main object, the teaching in the practising school a minor one. The School-Manager, however, and the Inspector know by positive experience that the degree of the certificate of merit is of very little value compared with the practical power of handling and working a school; and yet teachers now issue from training schools who have never been apprentices, who are under the age of twenty-one, who have got fair-looking certificates, and yet who are unfit to have any school entrusted to them. Several painful instances have lately come under my notice, and I expect that the number of these instances will increase. I am bound to say it, that in my humble opinion a great change of system in the practice of training schools is imperatively required; and I believe that in saying this I shall be supported by the majority of *practical* school managers. The two years probation now insisted on by your Lordships is an excellent regulation and check, and one on which, as far as my official responsibilities will allow me, I intend to act most rigorously. One of the two training colleges with which I am officially connected, that at Caernarvon, is provided with an excellent practising school, in the large National school of that town, and there ought to be no excuse for an inefficient teacher proceeding from it, if the school is properly and adequately made use of. A project has existed for training female teachers in the girls' school of the same place belonging to the National Society; and, if the school were improved in its internal arrangements, the plan might succeed under its present excellent and accomplished superintendent. At Caermarthen, hitherto, the National school of that town has not been sufficiently good for the students of the training college to see much beneficial practice in it; but I understand that measures have been adopted for remedying this state of things, and it is

much to be hoped that they will be taken full advantage of.* Supposing, however, that the difficulties and drawbacks on apprenticeship were removed, and that young men really did get sufficient practical instruction in teaching while going through a training school, there would still remain one cause operating against the maintenance of a sufficient stock of teachers; I allude to the ultimate prospects of provision in old age, which the teacher is bound to look forward to on first commencing his professional career. It is a calling by which few, if any, can hope to save money; I look upon this as a practical impossibility; that is to say, I think no teacher can lay by money enough to support himself in his old age, when infirmities compel him to give up his school. An erroneous idea has been pretty generally entertained among teachers, that, under your Lordships' regulations, meritorious teachers, after a certain number of years service, and when disabled by sickness and old age, would be *ipso facto* entitled to a retiring pension. I conceive this to be very foreign to your Lordships' intentions; nevertheless the idea has been rather extensively cherished, and, now that the truth is beginning to be perceived, much disappointment has been occasioned. On the other hand, the very gracious and liberal manner in which retiring pensions have been granted to Mr. and Mrs. Foster, of the Caernarvon National Schools, (no persons could have deserved them more fully,) has had an excellent effect throughout North Wales, though it has not removed the cloud of uncertainty which still hangs over this part of the educational question. I cannot but acknowledge myself that, unless a teacher should see his way pretty clearly to the possibility of making an adequate provision for his declining years, he ought by no means to enter the profession: he had far better apply himself to the pursuits of commerce. It may be all very well, *in theory*, to recommend teachers to subscribe to this or that insurance company; but *practically* the necessities of a teacher with a family are too pressing to allow him to do it; the temptation to withhold his subscription is too great to expose him to.

I am fully convinced that the only method of settling this question in a way to satisfy the minds of those interested, (and therefore to encourage persons properly qualified to be in the profession) is for the Committee of Council to frame a scheme whereby certain annual deductions would be made from the augmentations of all certificated teachers, and at the end of

* The observations which I have made on this school in my Tabulated Reports for 1855–6 have given rise to a correspondence with the Lord Bishop of St. David's, which will be found in the appended to this report (*Appendix* D.)

so many years to give them, as a matter of right,—not of favour or solicitation,—a proportionate retiring pension. It is to me perfectly certain that the poor prospects of teachers in their old age do now positively discourage many persons from becoming schoolmasters; and this too, notwithstanding the justly merited improvement in their salaries which has generally taken place. In connexion with this subject, I have received an interesting letter from a schoolmaster in my district, to the following effect.

"Pen-y-Parke National School, 3 January 1857.

"I FIND, from the perusal of our 'educational periodicals,' that various schemes are afloat by my fellow labourers for the raising of a fund for superannuation, and the establishment of asylums for decayed members of our profession, and the children of those whom it may please God to deprive of paternal care in their infancy. It is very desirable that such provisions should be made; and I presume, from the present appearance of affairs, that certificated masters generally would feel grateful if the Government would deduct annually a moderate sum from their augmentation, and apply it for that purpose, the same as is done in all other departments of the Civil Service. With certificated teachers, the way is clear, and I do not see why other teachers, who would contribute a proportionate amount annually to the general fund, should not be participators in its benefits. With regard to the asylums, I think they would form very valuable and necessary appendages to our training colleges, and soon become perfect 'model practising schools' for the students in training, which is, undoubtedly, of the utmost importance; for, until perfectly organized model schools are established, imperfectly organized schools must exist generally. If such institutions were established, subscriptions, donations, and bequests would soon be forthcoming from the friends of education, and they would become flourishing and valuable nurseries, wherein to train the rising generation, and eventually wherefrom to draw the future race of teachers of Great Britain.

(Signed) "G. H. THOMAS."

Religious instruction in Welsh schools.

In my General Report last year, some observations at the close of it, concerning the religious instruction given in schools, caused a correspondence, in which the Bishop of Llandaff did me the honor of commenting upon what was there said. As this correspondence resulted, on each side, in the publication of a pamphlet, communicated at the time to your Lordships, I need not make any further remark upon the subject. But I am still desirous of reminding your Lordships, that teachers in National and parochial schools in Wales labour under a difficulty which may seriously hamper them, and yet which it is certainly within their power to alleviate or remove. The unhappy alienation of by far the largest portion of the Welsh people from the Church of their fathers, and the unfortunate divisions that rage within that Church's pale, place the conscientious teacher in a position of no small difficulty. In the greater number of schools that I visit I find the choice of the religious subjects, the arrangement and practical teaching of those subjects, thrown exclusively on the shoulders of the teacher, without much interference on the part of the clergy. It is only right to suppose that a teacher has some religious bias of his own; were he exempt from it, he would have an advantage over his clerical superiors. If, then, a teacher with Low Church notions finds himself at the head of a school supported by a

High Church clergyman, the probability is, that he will either counteract the labours of that clergyman (involuntarily perhaps), or else he will soon have to resign his situation. Supposing him to resign, what is he to do? Is every parish school committee to hope that it may always find a master of the same theological views as the parochial clergyman for the time being? And yet, if not, what is the result, except a certain infusion of hypocrisy into the very life-blood of education itself? So far are things now carried that portions of the clergy of Wales are opposed to —and have spoken very strongly to me on the subject,—the two Welsh training colleges, because they suspect that theological ideas are taught in them contrary to their own. This very circumstance tends to drive apprentices and Queen's scholars out of Wales to English training institutions; the High Church go to St. Mark's, the Low Church to Cheltenham; the former prefer training colleges established by the "National Society," the latter those patronized by, or connected with, the "Church of England Education Society," which was originally founded in opposition to the National Society and its training colleges. It seems to me that the proper safety of a parochial schoolmaster lies in his falling back on his position as a layman, and as one not warranted to give any religious instruction to his scholars without the positive and express direction and advice of his clergyman. Is a *scheme* of religious instruction necessary in a school? It is the clergyman's duty to draw it out, and to see that it is carried into execution. Ought the children to be *regularly* and *periodically* examined in religious knowledge? It is the duty of the clergyman to conduct that examination himself. Managers may leave the secular part of the teaching, if they think it safe and advisable, to the uncontrolled discretion of the master; but the religious instruction is too important, too sacred a thing to be neglected by those whose duty it is to attend to the spiritual welfare of the young as well as the old; and the judicious teacher, who wishes to pass unscathed through the ordeal of parochial theology, will take care to require from his school-managers, through the clergyman, a series of written directions for Scripture-reading, doctrinal teaching, and religious examination. He then no longer acts on his own responsibility in a matter, for which he has no right to be held answerable; he is a man essentially under orders, and under orders in such things he ought to be careful to act.

Want of inspection with a view to improving organization of schools.

It were greatly to be wished that the lay members of school committees would co-operate with the clerical ones in organizing some scheme for school inspection and school examination among themselves; and, instead of supposing that a half-yearly or yearly muster-day and distribution of prizes, or an attendance *en masse* once a year when the Inspector comes, were

sufficient, would arrange for frequent and regular visits to the school, and would settle in an amicable spirit with the teachers some plan of village inspection. The conscientious teacher works all the better for knowing that his school-committee are really desirous of co-operating with him, and of giving him the opportunity of having his own work frequently *proved* and *checked*. A little judicious arrangement would effect much good in this matter, and we should not hear such frequent complaints of teachers leaving their situations in quest of more agreeable if not more profitable appointments. Notwithstanding the lapse of so many years since the inspection of schools under your Lordships' directions commenced, imperfect notions of the nature and objects of inspection still exist in my district. Some managers of schools seem to think that the Inspector ought to perform all the duties of an organizing master, and should set right, in the course of a few hours, what their own want of attention for a whole year has allowed to go wrong. Others suppose that an Inspector's duty is confined to an examination of the children, and that he is not mainly concerned in inquiring into the manner in which the teacher conveys instruction, and works his school. Not a few imagine that the best way of securing a "good inspection," as it is called, is to assemble as many strangers and gazers as they can, to assist at a transaction, which should be as private and quiet as an operation in the sick-ward of an hospital. It often occurs that the anxious friends of a school bring the junior members of their families and thrust them into the classes, "to hear the Inspector's questions and the school-children's answers;"—and some bring their dogs, though for what purpose, I never could exactly discover. All these trifling circumstances, while they only tend to hinder an Inspector in his duties, and to place the school teachers under great disadvantages, betoken an ignorance of the most primary elements of school-management; in fact they do not occur in the best schools. Persons who really and practically understand the science of education are not commonly met with; but, when they are, an Inspector's task becomes one of the most agreeable nature. Sure I am that no school can be efficiently maintained without much activity, self-sacrifice, and judicious inspection, on the part of the clerical and lay managers; and that, where the various members of a school-committee act together with earnestness and sound sense, they are pretty sure of producing a satisfactory result.

I have the honor to be, &c.

H. LONGUEVILLE JONES.

To the Right Honorable
The Lords of the Committee of Council on Education.

Appendix A.

Summaries of Tabulated Reports, for 1855–6, on Schools inspected by Rev. H. L. Jones.

Appendix B

An Address to the Parents of Children in the Swansea National Schools.

(From the Teachers.)

For what purpose do you send your children to school? Is it not that they may receive at our hands that instruction and training which, under the blessing of God, will fit them both for this world and for that which is to come?

You have acted wisely in sending them; and, under certain circumstances, you have a right to expect a rapid improvement in them. But are you assisting us by every means in your power in the great and good work in which we are engaged?

Learning, you know, is often compared to a journey. Now, if you allow your children to be frequently absent, unpunctual, or to leave the school before the time of closing, they will fall behind their school-fellows as certainly as a traveller would be behind his companions if he were detained a day on the road. And, to carry on the illustration, the greater the number of days he is detained, the greater will be the distance that traveller would be from his friends. So with your children.

Where these bad habits are the *most* frequent, there shall we find the *least* progress. We would, therefore, respectfully recommend that the children be not kept at home for slight reasons, and that every parent would make it a rule, as some already do, never to allow their children to be absent unless through sickness or circumstances of urgent necessity. Strive, also, to send them in time. If they are unpunctual now, they will, most likely, be always so. And, what is worse, they learn, by their absence from prayers, with which the business of the school opens, to neglect praying to God. Should a child be required at home, leave of absence should *first* be obtained, and should he be unavoidably detained, a note should be sent. This destroys the temptation to tell falsehoods, or to make idle excuses.

Many parents are continually removing their children from school to school, giving, as a reason, that they are backward. They place the blame upon the school, and forget that the real cause is either the child's own idleness, inattention, dulness, or, what is most likely, the bad practice to which we allude. Bees store a hive of honey by wandering from flower to flower. Not so with children. The more frequent the change the more empty their minds. No two schools are exactly alike; at every change, therefore, the child has to learn a new system. Till this be done, and the teacher has acquired a thorough knowledge of his disposition, powers, and attainments, the progress is very slow. These changes often arise from idle tales carried home by the children, or from some misunderstanding on the part of the parents.

We beg to suggest, that on all such occasions the parents of the child will see the teachers, who will be always willing to listen to any reasonable complaint. This will give an opportunity of clearing up any difficulties that may exist, and of cultivating that good feeling which should ever be manifested between the parents and themselves, seeing that they are deeply interested in their children, standing, as they do, in their stead while the children are under their care.

Another hurtful practice is the taking them from school at a very early age, just when their minds are best fitted to receive instruction. They are removed from our care before good habits are permanently fixed, and the character moulded. Our object is not only to impart knowledge, but to train the children "in the way they should go." The latter is a work demanding much more time than the former. The most confirmed liar may be taught in *a few minutes* the consequences of his sin, but to get him to speak and act truthfully is a work of *months*—perhaps *years*. We know that many are removed from absolute necessity, to increase the family income. Of these we do not complain. We are equally certain, however, that many are removed for no other reason than the child's own desire "to go to work," the parents themselves being anxious to prolong the period of school life. The feeling alluded to is very common among children, but should be checked till the parents see fit to take them from under our care.

Many parents postpone the payment of the school fees till Wednesday or Thursday. This is not only contrary to the rules of the school, but is a very hurtful practice, as the teacher is compelled to devote five or ten minutes daily for collecting the money; time which otherwise would be employed in giving instruction. These parents should remember that not only is this time lost by their children, but to every child

in the school. Should any parent feel desirous of paying *quarterly* he can do so; the fee can be ascertained from the teachers.

In conclusion we crave your assistance, your support, your prayers. Pray for us, for your children, that they may grow up wise and good; for their teachers, and for the school; and so shall it be your blessing to behold them walking in the narrow path—the path to heaven.

Appendix C.

Plan adopted for Needlework at Dafen School.

Every girl has an apron with a large pocket in front of it, and her name marked in full at one corner of it. After the school has opened and all the girls are seated, the monitors each take the parcel of aprons allotted to their respective classes and distribute them. In the pocket of each is the work, placed there on the previous day. As the girls receive their aprons, they put them on, and at a sign from the mistress they all turn, so that each child ties the string of the one before her. The thimbles and needles are then given out, and one little child is appointed to give out the cotton; there is generally one unable to work from a cut or burnt finger. The clothes made in the school are all of a nature most suitable for the wear of the women and children of the labouring class. About once in two months an afternoon is appointed, or a half holiday, when the elder girls (say about twelve) meet at the house of the mistress, or of some lady interested in the school, to cut out and prepare, in some measure, the work. All the girls are taught, as soon as possible, to prepare the work for themselves. When a sufficient quantity of work is finished, a day is appointed for the sale of the articles, when the parents of the children and others belonging to the works have notice of the same. The articles are sold at the price of the cost of materials, no extra charge being made for the needlework.

The youngest children are employed in hemming and sewing together the fag-ends of calico and prints, which make good dusters, and all sold for one halfpenny each. They are also employed in sewing patchwork.

All the work is done to tend to some useful purpose, which has the effect of making the children take more interest in it. The two elder classes are taught to darn stockings, a week occasionally being devoted entirely to this. The managers feel sure the great success of the plan adopted in the Dafen school is owing to the methodical and patient manner in which all is carried out by the mistress.

The plan of the work has been given, but, perhaps, it might be as well to state by what means the sewing was and still is carried on. Five pounds were placed in the hands of the mistress; with this sum a stock of calicoes, prints, needles, thimbles, cottons, tapes, &c. were purchased.

The cutting-out classes were formed, and the materials before mentioned cut out into different articles of clothing suitable for women and children of both sexes and various ages.

The articles made were sold at the following rates. The whole stock was disposed of, and the fund was, therefore, left undiminished, so that the same plan will be repeated during another period of three months.

No. 1. Class of Garments.

Boys' and Girls' Shirts and Shifts.

For 2 to 4 years,	1 yard brown calico,	at 3*d.* and 1*d.* for cotton,	sold at	4*d.*
„ 5 to 7 years,	1½ „	„ at 3*d.* and 1*d.* „	„	5½*d.*
„ 7 to 10 years,	2¼ „	„ at 4*d.* and 1*d.* „	„	10*d.*

No. 2. Class of Garments.

Boys' Round Pinafores.

For 2 to 4 years,	1¼ yards print	- at 6*d.* and 1*d.*	„	8½*d.*
„ 5 to 7 years,	1½ yards brown Irish	at 8*d.* and 2*d.* for cotton, buttons,	sold at	1*s.* 2*d.*

No. 3. Class of Garments.

Girls' Pinafores.

For 2 to 4 years, ½ yard brown Holland, at 8*d.* and 1*d.* for cotton, sold at 5*d.*
„ 5 to 7 years, ¾ „ „ at 8*d.* and 1*d.* „ „ 7*d.*
„ 8 to 10 years, 1 „ „ at 8*d.* and 1*d.* „ „ 9*d.*
„ 11 to 13 years, 1⅞ „ „ at 8*d.* and 1*d.* „ „ 1*s.* 4*d.*

No. 4. Class of Garments.

Frocks.

For 2 to 4 years, 2 yards print, at 7*d.*, tape and cotton 2*d.*, sold at 1*s.* 4*d.*
„ 5 to 7 years, 3½ „ at 7*d.*, „ „ 3*d.*, „ 2*s.* 3½*d.*
„ 8 to 10 years, 5 „ at 7*d.*, „ „ 3*d.*, „ 3*s.* 2*d.*

No. 4. Class of Garments.

Womens' Shifts.

1st size, 2½ yards brown calico, at 3*d.* and 1*d.* for cotton, sold at 8½*d.*
2nd size, 9 „ „ at 3*d.* and 1*d.* „ „ 10*d.*

No. 5. Class Garments.

Women's Aprons.

1st size, ¾ yard print, - - - at 7*d.* and 1*d.* cotton, sold at 6½*d.*
2nd size, 3 yards, ¾-wide, will make *two*, at 7*d.* and 1*d.* cotton, „ 11*d.* each.

Appendix D.

Sir, Abergwili, Caermarthen, 6 December 1856.

I beg to enclose a copy of a letter which I have felt it my duty to address to the Rev. H. L. Jones, Her Majesty's Inspector of Schools, with reference to an observation contained in his last Tabulated Reports.

I am, &c.

R. R. W. Lingen, Esq. (Signed) C. St. Davids.

Dear Sir, Abergwili, Caermarthen, 6 December 1856.

I perceive that in your Tabulated Reports for 1855-6, a copy of which has just been forwarded to me, you repeat an observation which you have made in previous reports, with regard to the name of the Caermarthen schools:—"If these schools are to be called *model schools*, as I find them termed at Caermarthen, they are not good ones; if they are National or parochial schools merely, and are so called, they may be considered equal to the average of town schools." The history of the name "model school" is simply this:—Long before the foundation of the Caermarthen Training Institution, there had been a school at Newport, Pembrokeshire, maintained by the trustees of the Bevan charity, and designed to serve not only the common purposes of instruction, but to provide some kind of training for schoolmasters employed by the trustees, and hence it received the name of the "central" or "model" school. It, however, answered both purposes very imperfectly, and was of a very low character. It appeared to me that it would be very desirable to transfer this establishment to Caermarthen, and to furnish it with means of accomplishing its object as a training school more effectually. The school built in pursuance of this intention was called by the name of that which it was meant to supersede.

After the opening of the Caermarthen Training Institution, the "model school" was of course no longer needed for the purpose indicated by its name; but, as commonly happens, the name continued to cling to it. It has ever since been used as a practising school for the training institution, because circumstances have not permitted one to be opened nearer to the institution.

I distinctly remember that in a conversation which I had with you when you called on me here some years back, I explained to you all the circumstances above stated with regard to the origin of the name "model school."

It was with much surprise and concern that I afterwards saw in your next report, an observation on the name to the same effect as that in your last, and at the public examination of the schools then next following, I adverted to your remarks, in order that every one present might understand the precise state of the case. The matter is no doubt of very little importance, but the observation, beside being unfair and unpleasant, places the schools in a false light, and has a tendency to create an unfavourable opinion of the managers. I make this statement, however, not for your information, as you have been long in possession of the facts, but for the purpose of sending a copy of it to the Committee of Council, that the truth may be known where it is most important that it should not be misrepresented.

I am, &c.

Rev. H. Longueville Jones. (Signed) C. St. Davids.

Education Department, Council Office, Downing Street,

My Lord, London, 10 December 1856.

I have had the honor of receiving your Lordship's letter of the 6th instant, and a copy of it has been communicated to me by the Committee of Council on Education. I beg leave to make the following observations in reply.

Your Lordship is quite correct in calling to memory the substance of the conversation on the subject of the schools in question, which occurred some years ago; and, in consequence of that conversation, a communication took place between the Secretary of the School Committee and myself, from which I understood that the committee did not desire the schools to be called Model Schools, nor considered as such in the official acceptation of the word, and that in future they would be called "National Schools."

Subsequently to that period, however, I have found the name of "model school" (which certainly is not a matter of much importance abstractedly considered) applied by the authorities of the training school, and by the teachers and pupils of the schools themselves. I have also found the boys' school, as distinguished from that for the girls, appealed to as a *bonâ fide* model school, in the ordinary sense in which that term is applied. Besides this, I have found the girls' school called a model school, and considered as such in various parts of the country. It became evident, therefore, that, though your Lordship and the members of the School Committee applied the term in a peculiar and restricted manner, yet a numerous class of persons had got into the habit of using it in a general sense, and of attributing to the schools higher qualities and greater efficiency than the authorities connected with them wished to lay claim to.

My late colleague, Mr. Moseley, when visiting the schools with myself two years ago, heard them called model schools by the managers, and exclaimed to me that if so, they were models of much that was to be avoided.

My present colleague, Mr. Temple, and myself, during our last visit to the boys' school, both agreed in considering it as not fit to be called a model school, in connexion with the training school.

At Caernarvon, where the other Welsh training school is, there are two *bonâ fide* model schools, boys' and girls', fully entitled to the name, and they are so called and considered throughout North Wales. Any person who should not have had the advantage of receiving your Lordship's explanation, and yet who should hear the same term applied to the Caermarthen schools, would naturally be led to expect the same kind of excellence in the latter as in the former; and he might draw a comparison very unfavourable to Caermarthen, unless he should become aware of the actual state of the case.

Your Lordship's explanation seems to me to refer to the boys' school alone, but the girls' school has assumed the name of model school as well as the other.

It seems to me that for the sake of the schools themselves it would be better for them definitively to take their proper appellation of National or parochial schools, and then there would not be so much likelihood of erroneous conceptions as to their condition being entertained by the public.

I beg leave to assure your Lordship that I by no means wish to say anything unfair or unpleasant of the schools in question,—just the opposite; but rather to

prevent them from being judged by a test, to which their managers do not advance any claim on their behalf.

If they are to be called model schools, they must be compared with other model schools, and they may suffer greatly by the comparison; but if they are to be called only National or parochial schools, they will assume their proper position in public opinion, and be judged accordingly. I cannot call them model schools myself without instituting a comparison of this kind, nor without expecting from them the fulfilment of various conditions, which they are not at present calculated to satisfy.

If your Lordship's explanation of the term, as applied to these schools, could be put on record by being printed in the Minutes of the Committee of Council on Education, I feel persuaded that the erroneous opinion now existing as to the character of the Caermarthen schools would be removed, and that the result would be beneficial to the schools themselves. Nothing can be farther removed from my intention than to do anything that may either prejudice them on the one hand or be obnoxious to their managers on the other; but I humbly conceive that if the public, however erroneously, is allowed to apply to these schools a term, and therefore expect from them results, to which they are not entitled, much disappointment will be caused by the circumstance.

I have the honor to be, &c.
(Signed) H. Longueville Jones.

To the Lord Bishop of St. Davids.
&c. &c.

Dear Sir, Abergwili, Caermarthen, 13 December 1856.

I cannot think that, even on your own showing, you were justified in your observations on the Caermarthen schools by the facts within your knowledge. You must have been aware that these observations would be understood by every one who read them as a reflection on the managers of the schools, as persisting in the dishonest practice of decorating their schools with a sounding epithet to which they are not entitled. It now appears that you did this after having received a declaration from the secretary of the school committee, "from which you understood that the committee did not desire the schools to be called model schools," and that the only ground for your observation is, that "a numerous class of persons had got into the habit of using the name in a general sense." No doubt they have, from the cause which I explained to you; and I thought it was pretty notorious that when such a habit is once formed it is not easily corrected, and that even persons who are fully conscious of its impropriety will at times unguardedly relapse into it. I am not, therefore, at all surprised that you should have heard the title applied to the schools, even by the "authorities of the training school," much less by other persons not so well informed of the state of the case. But I cannot think that this unavoidable effect of habit was a sufficient ground for such an invidious observation, or of sufficient importance to call for any public notice. If you are in possession of any secret by which the managers can induce everybody to describe the schools correctly, they will no doubt be obliged to you if you will have the goodness to impart it to them. But until then it appears to me that they can only be fairly made responsible for their own official language; and with regard to the "authorities of the training school," I happen to know that in the correspondence of the local council with the Welsh Education Committee the schools are correctly described. But they would not be so if, according to your suggestion, they were to take the appellation of National or parochial schools. This would, indeed, be the truth, but it would not be the whole truth. It would not be a "proper," because it would be an incomplete appellation.

From your observation in the Tabulated Reports I was led to conclude, though it would otherwise have seemed incredible, that you were not aware of the fact that the boys' school is the practising school of the training institution. It now appears that though fully aware of the fact, you think it "proper" to ignore it yourself, and recommend that all the parties concerned should do so likewise. I cannot assent to that opinion. The boys' school would not be properly described as a mere National or parochial school, because it is not only used as a practising school, though in that respect labouring under the unavoidable disadvantage of being situate at an inconvenient distance from the institution, but is, on that account, partly supported by the Welsh Education Committee and the local council of the training institution, who contribute, I think, one half of the master's salary.

The girls' school is simply a National school, as I think an excellent one, though it may be without any pretentions to the technical distinction of a model school.

I am not very deeply affected by your contrast between either school and those of Caernarvon, or by your reference to the judgment of Mr. Moseley. I had the advantage of being able to compare that judgment with the evidence of my own senses, and gathered from it two instructive lessons. I learnt how unsafe it must be to rely on anything but ocular inspection for the real character of a school; and further, how easily a school may get a bad name from very trifling and casual circumstances. I shall not now be either suprised or much concerned if you should repeat the same observations in future reports, as the circumstances which have appeared to you to warrant them are beyond my control. My chief anxiety has been, that the Committee of Council should understand the real state of the case, but I shall take the earliest opportunity of putting the managers and friends of the schools on their guard against misdescribing the schools in your hearing.

I am, &c.

Rev. H. Longueville Jones. (Signed) C. St. Davids.

Education Department, Downing St. London,

My Lord, 17 December 1856.

Adverting to your Lordship's letter of the 6th instant, and to its enclosure, I am directed by the Lord President to inform you that Mr. Longueville Jones has forwarded a copy of his reply to your Lordship for consideration by the Committee of Council.

The Lord President hopes that the explanation afforded by Mr. Longueville Jones will be satisfactory to your Lordship, and if it would further conduce to the same object, that the substance of the correspondence should be embodied in, or appended to, the next General Report made by that gentlemen, the Lord President authorizes that course to be taken.

His Lordship has noticed with pleasure the exertions recently made by the local council of the training college for its general improvement, including the elementary school in which the students practise teaching. The Lord President believes that Mr. Longueville Jones appreciates these exertions, and his Lordship thinks that the tone of Mr. L. Jones' explanation may be taken as evidence of the friendly spirit in which he regards them.

I have the honor to be, &c.

The Lord Bishop of St. Davids. (Signed) R. R. W. Lingen.

Sir, Abergwili, Caermarthen, 18 December 1856.

I have the honor to acknowledge the receipt of your letter, and beg to express my obligation to the Committee of Council, and especially to the Lord President, for the attention they have given to the subject with which I have very reluctantly troubled their Lordships.

I had understood from Mr. Longueville Jones that he had forwarded my answer to his letter to the Committee of Council, but, as there may have been some mistake, I beg to enclose a copy, from which their Lordships will see how far I am satisfied with Mr. Longueville Jones' explanation; and I have only to add that I do not at all question his having acted under a sense of his official duty.

I am much obliged to the Lord President for his offer to permit the substance of this correspondence to appear in Mr. L. Jones' next General Report; and, though I have no personal feeling on the subject, I think that such insertion may be desirable, as tending to correct misapprehensions which may have been suggested by Mr. L. Jones' Tabulated Reports, and otherwise to set the matter in its true light.

I am, &c.

(Signed) C. St. Davids.

R. R. W. Lingen, Esq.

GENERAL REPORT, *for the Year* 1856, *by Her Majesty's Inspector of Schools*, J. D. MORELL, Esq., A.M., *on the* BRITISH SCHOOLS, *and the* WESLEYAN *and other* DENOMINATIONAL SCHOOLS, *inspected by him in the* NORTH-WESTERN DIVISION *of* ENGLAND; *and in* NORTH WALES.

MY LORDS, January 1857.

Education a popular question.

I HAVE the honor to lay before you my report for the year 1856. It is now just ten years since the present plan of Government assistance in aid of national education was sketched out and brought into operation. During these ten years one great good at least has been accomplished, namely, that the education of the people has become at length a *popular* question. Previous to that time there were, indeed, *individuals* who had a clear insight into the necessity of improving the educational arrangements of the country, and worked heartily, amidst many discouragements, towards this end; but the word "*education*" was wholly unknown as representing any great national question, not to say that it had no connexion whatever with the work of the legislator.

By degrees, however, the education question has raised itself into a degree of prominence which hardly admits of any one feeling towards it complete indifference. In private and in public, in the schemes of religious communities and the plans of industrial establishments, in the councils of municipal bodies and in the supreme council of the nation, the educational wants of the country, and the best means of supplying them, have become the topics of frequent and anxious deliberation. If there are still those who look with distrust upon the march of intelligence amongst the masses of the community, their voices, feeble at best, seem now almost like the echos of times gone by. It appears to be a settled question, that the people *must* and *will* be educated. The only difficulty which remains is to decide *how* this end is to be accomplished in the most unobjectionable and beneficial manner.

The voluntary principle.

In looking back, as we are now naturally tempted to do, upon the history of the education movement in this country, we cannot fail to observe the important part which the *voluntary* principle has played in the whole procedure. It was by its agency, indeed, that the work of popular education was primarily set afloat; and however inadequate it *has* been, and still *is*, to accomplish the whole of the ends that ought to be contemplated, and *must* be finally secured by a complete system; yet there can be no doubt of the power which it has exercised in bringing the question into prominent

notice, in furnishing a very large amount of the educational means now in operation, and in exercising a wholesome vigilance over the practical working of education generally throughout the country.

The self-paying principle.

Almost simultaneously with voluntary efforts, the *self-paying* principle came into operation. The primary form of this was the payment of 1*d.* per week from each scholar; and for many years this continued to be the ordinary rule of most British and National schools. This original "penny a week" has now, in a large number of cases, been increased. Amongst the schools under my own inspection, it has become the *exception* rather than the rule, the more usual fee being about 3*d.* per week, and in many cases even 4*d.* and 6*d.*

Taking all the schools under inspection throughout the country, it was found, by the last returns, that the aggregate amount paid in school fees during the year was above 178,000*l.* The entire amount of voluntary contributions in the same schools, and during the same year, was a little over 187,000*l.* So that, amongst the better class of schools, the voluntary and the self-paying principle furnish very nearly equal sums towards the general education of the country.

Principle of Government grants.

In the year 1846 the present system of supplementary grants by the Committee of Council on Education came into exercise. These grants have gone on from that time steadily increasing, so that, independently of all collateral expenditure connected with inspection, normal schools, &c., above 200,000*l.* have been applied from this source during the last year to the direct aid of the same schools as those above mentioned (about 7,000 in number), whether in the form of augmentation to masters' salaries, payments to pupil-teachers and assistants, or grants for books and apparatus.

Three sources of income to primary school.

Here, then, we see the *three* sources from which the great mass of well-regulated primary schools throughout the country are supplied with the requisite funds. Each source, it will be seen, contributes something approaching to an equal sum, *i.e.*, about one-third of the entire amount expended upon the whole process of education in the schools in question.

Disadvantages of the voluntary principle.

If any one were to suppose, however, that the amount of *money* derived from them represents the whole of the importance attached to the three above-named principles, he would certainly be very incorrect in his estimate. First, with regard to the voluntary principle, it is certainly *not* the money side of the question which is most to be regarded or most highly to be valued. As a source of pecuniary support, the voluntary principle proves itself in actual experience to be singularly defective. Occasionally, under especial excitement, it can make great spasmodic efforts, but it wholly fails in

pouring that constant, steady, silent stream of pecuniary supply into the coffers which is necessary to maintain in vigour, health, and full activity all those individual institutions upon which the real education of the people must directly depend.

Another evil arising from purely voluntary schools, is the state of dependence to which the teacher becomes naturally reduced, and the tendency thus given to deteriorate the whole class. No large and intelligent body of men, who have education, energy, and the world before them, will give themselves up in the long run to a life of dependence (and thus of comparative uncertainty) such as must necessarily be involved in the fact of living upon voluntary contributions, for which no equivalent is rendered *to the donor*. Accordingly, those who have been most strenuous in maintaining the voluntary principle in education are gradually changing their ground, and silently substituting the self-paying principle in its place. And *so far* they are right; for, of the two, the self-paying principle is by far the most sure, the most steady, and the most satisfactory to all parties concerned. Where it is sufficiently developed to keep the school in vigorous operation (a state of things *now* not very unfrequent), it lays no burden upon private benevolence, reduces no one to a state of dependence, and instead of pauperising the population, as far as regards the instruction of their offspring, gives them the honest and wholesome feeling that they are able to *pay* for the advantages they are receiving.

Advantages of the voluntary principle.

The real value of the voluntary principle lies in the healthy impulses, the daily encouragements, and the moral aid that are afforded both to the teacher and scholar by the presence and personal interest of those who occupy stations of influence in the several localities where the schools are situated. However possible it might be to have schools *formally* as complete, and education quite as widely extended, by the instrumentality of paid officials only, yet no such instrumentality could *wholly* supply the loss of that daily personal influence which is excited so largely on the present system by those who seek to further the education of the poorer classes around them, simply and solely with a desire to promote their welfare. This is certainly an element in our *present* national education, which may well be guarded with some degree of jealousy, and which must not be lightly swept away by the rising tide of any universal national system.

Self-paying system:

But next, what are the precise advantages and disadvantages of the self-paying system? To the former I have adverted already. The parent gives something approaching a fair remuneration for the instruction offered his children, and the master feels that he is paid an honestly gained income by those who receive the benefit of his labours. Both derive satisfac-

tion from this. The parent *values* that for which he can give an equivalent in the education market more highly than that which is bestowed upon him in *charity*. The interest of the parent thus kept alive, reacts upon the child, and makes him more regular and more attentive as a scholar. The master, on his side, feels that it is not only his *duty*, but equally his *interest*, to give the best education in his power, as the funds of the school, and consequently his own personal comforts, depend upon his keeping up a good supply of scholars.

Its disadvantages.

On the other hand, the self-paying principle *fails* in carrying education just where it is most wanted, I mean to those who are too degraded or too abandoned to take the slightest interest in the question, and who would rather prefer than not to see their children grow up like themselves. Were there no parents sunk in indifference, brutalised by vice, or pining in abject poverty, then the self-paying principle, accompanied by some arrangements for Governmental or other inspection, and backed by a good pupil-teacher system, might suffice for the whole country. But this, alas! is far enough from being the case, and therefore something *more* is required to rescue the children of such families from the lot impending over them. It is a lamentable fact, moreover, to contemplate that in this country, blessed as it is with unprecedented commercial prosperity, and attracting to it the riches of the world, there should still exist vast masses of human beings who can only secure the barest necessaries of life, and that without any assignable blame attached to themselves. So long as the enormously unequal distribution of wealth in our present state of society throws untold resources *here*, and leaves poverty and want to revel *there*, it is surely the least which the community can be called upon to do to assist in elevating those which our own social evils appear to abandon otherwise to hopeless ignorance and deprivation.

Government grants.

The voice of reason and justice, which had long uttered itself to this effect in the silent reflections of most philanthropic minds amongst us, found a response in the establishment of the Committee of Council on Education, and in the determination to aid actively and substantially in furthering the education of the poorer classes of the community by means of *national contributions*. And here, too, it may be safely affirmed, that it is not the mere amount of money contributed to individual schools which in any way represents the whole of the advantages accruing from the system of Government grants now adopted. No doubt the sums of money granted to the schools have been extremely useful. They have aided in procuring better school-rooms, better apparatus and furniture, a better supply of books, and better teachers. Indepen-

Their advantages.

dently, however, of all this, there are several collateral effects arising out of such grants, which have produced a powerful effect upon the progress of popular education in the country.

Inspection. First, there is the effect of *inspection*, of which, of course, it does not become me to speak very definitively. To speak *generally*, however, it must be obvious at first sight that to draw a large body of men of liberal education into the interests of popular instruction, to give them the opportunity of gaining a wide experience respecting it, and then of reflecting that experience back upon the schools in their annual visits, and still further, to put into their hands the power of *publishing* the results of inspection to the world, as a stimulus to teachers in the prosecution of their work,—that all this must necessarily exert no small influence upon school matters in general, whether viewed theoretically or practically. Without entering further into this particular point, I may mention,—

School methods. Secondly, the influence which the Government grants have had in remodelling *school methods*. This, of course, could not be done without incurring the expense of providing a larger quantity of teaching power. Where one master has to teach a hundred or more children *single-handed*, he has only two resources to which he can betake himself. Either he must employ monitorial agency taken out of the school itself, or he must do nearly all the teaching collectively at the gallery, both of which plans are fraught with obvious difficulties, inconveniences, and imperfections. The apprenticeship of pupil-teachers has almost entirely overcome this difficulty. The schools have gradually become moulded into *sections*, and each section has been furnished with a teacher of sufficient capacity to *ensure* a certain amount of solid instruction, and consequently of progress amongst the scholars.

Normal schools. Thirdly. Closely connected with the system of pupil-teachers has been the development of normal schools in the country, which I cannot but regard as the main and most important amongst the collateral effects of Government grants upon the progress of popular education. Twenty years ago normal schools can be hardly said to have existed amongst us. One or two institutions at most received young men or women who were furnished with some little knowledge of school methods, and then were sent out into the country, usually with the slenderest possible education themselves, to educate the community. Now there are no less than thirty-two normal schools immediately under Government inspection, each of them giving a one, two, and even three years' course of study, as comprehensive in its general range as it is practical in its adaptation to the wants of the teacher. This more extended range of study in the normal schools is rendered possible by

the fact, that instead of receiving a miscellaneous number of almost wholly uneducated persons as students to be instructed and trained, they are now almost entirely supplied from the pupil-teachers who have completed their apprenticeship, and who enter the institution usually with far more education *to begin with* than the large majority of former students attained to on leaving. The extent to which the development of normal schools has already been carried may be judged of from the single fact that an average of thirteen hundred students who have completed their course present themselves for undergoing the Government examination every Christmas, and that nearly the whole of them, having received a certificate, go forth as accredited teachers into the country. And it is likewise a pleasing fact to record, that (so far, at least, as has come under my own observation) the demand for teachers has always been fully equal to the supply. Thus we have been certainly beginning at the right end; for however complete school establishments may be throughout the country, and however much money may be expended on them from public or private sources, all would be of very little service without a good supply of efficient teachers. The real increase of popular education, in fact, can only be rightly measured by the normal increase of effective teaching power.

More *mind* brought to bear upon subject of education.

Added, *fourthly*, to the other points we have mentioned, there is this very important good which has come out of our present system of education, namely, that a large amount of *mind* has been brought generally to bear upon the subject. Besides the now tolerably large staff of inspectors, there is a still larger staff of principals and professors in the training schools, whose energies are devoted almost entirely to this object. Hence educational literature has taken a new start, and occupies now a most important place in the intellectual activity of the country and the age. General attention has been drawn at once to the theory and the practice of pedagogic, and after a long slumber the community appears at length to be awaking to the consciousness that the well-being of the country does not depend wholly upon political principles on the one hand, or any particular ecclesiastical dogmas on the other, but quite as much, and *perhaps* a great deal more, upon the intellectual and moral training of the great slumbering world of infancy and childhood.

Future measures, how aided by experience of past.

So far, then, are we now arrived towards the solution of the great problem of *the education of the country;* and it is, I think, impossible not to look back with deep satisfaction at the progress which has been made towards this end during the last ten years. What further developments may sooner or later appear, it is not my province to anticipate or to sur-

mise. The experience of the past, however, teaches us, I apprehend, very plainly, that of the three principles now in operation for the support of popular schools, each one has its *good* and its *bad* side. Perhaps the first and most certain effect of an extended system of education, whether based upon rates, or otherwise supported from public resources, would be to paralyze the effect of the voluntary principle altogether. This has *not* been in any degree the effect of the Government grants *hitherto*, because they have been applied only to such an extent and in such a manner as to stimulate rather than to swamp private efforts. When once the *necessity* of private benevolence, however, in connexion with popular education is really taken away, it cannot be supposed that the voluntary principle will survive such a trial. As far as money goes, this would not be a result at all to be deprecated, as it would raise the support of educational establishments above the fluctuations and other inconveniences by which, as I before showed, eleemosynary supplies are always attended. But to exchange *altogether* the private interests of local friends for the periodical visits of official inspection, would certainly be a matter of serious consideration; and it is well worthy of inquiry, whether it be not possible to combine the steadiness of support arising from national funds with the personal interest and supervision which has been secured hitherto by the necessity of voluntary effort. Another matter, which those best acquainted with the working of popular education feel it highly important to guard against, is the entire immunity of parents from the payment of school fees. The interest of the wise, the good, and the benevolent on the one side, and the interest of the parents on the other, are *both* so well calculated to give a healthy bias to the working of primary schools, that they need to be guarded with no small amount of care and jealousy in the whole of the future development of popular education. How, then, is this to be reconciled with the fact above alluded to, that there are many amongst the lower strata of society who seem to have no one to care for them, and, what is worse, care nothing for themselves beyond the immediate supply of their physical wants? It seems to point plainly to the necessity of having a *twofold* form of public aid; one adapted to the wants of the working classes generally, as being both able and willing to pay a reasonable school fee; and the other adapted to those lower strata of whom we just spoke, and who must be raised, if at all, by dint of purely extraneous efforts, which may calculate upon resistance rather than co-operation on the part of those for whose benefit they are intended.

New machinery wanted.

A normal and national extension of the present arrangements appears to be well adapted to overtake the educational

wants of the country, as far as the former portion of the community is concerned. But it is an undoubted fact that we are *not* at present educating, nay, scarcely touching, the more degraded classes in our large towns and populous villages. To do this we need a totally new machinery, which, in addition to providing in certain localities *free education*, shall at the same time offer every inducement and exert every kind of indirect pressure to rescue these Arabs of civilization from their present dangerous habits of preying upon society around them.

Theory and practice.

These, however, are reflections in which one rarely indulges, except when the close of the inspecting year, and the demand for some account of the progress which education has been making, throws the mind back upon such topics. Practically speaking, there is enough fully to occupy the thoughts and the time of an inspector in the *actual work* which lies ready to his hand before him. His principal business is to make the best of the plans and materials which alread exist, and try to realise the greatest possible results with the machinery now in operation.

Cause for satisfaction in the main.

In looking back upon the ten years which are past. there is cause for solid satisfaction in tracing the change which has gradually come over the tone and spirit of primary education through the country. That peculiar class of really bad, useless, inefficient schools, which were so often to be met with *then*, have well nigh disappeared. We can now, whenever the present educational machinery is at all honestly applied, calculate with certainty upon a fair amount of efficient instruction being rendered to the pupils.

Typal schools..

Neither is this *all*. There have sprung up here and there, under the influence of superior teachers, who have well understood how to apply all the advantages now afforded them, a class of primary schools to which the past, I believe, can present no precise parallel; schools in which a mental training is afforded as complete as any which the country can present, independently, of course, of the classical element. I look upon these schools as peculiarly valuable. They are just those which seem to bridge over the gulf between the past and the future, and which give us some idea of the educational training which will some day have to be the lot of every subject of this country. I might mention several schools in my district which come very near to this typal character; as it is, I shall merely name three of the foremost, which, in justice to their excellency, deserve an especial notice and commendation. These are the New Church boys' school in Manchester, the British school in Warrington, and the British school in Stockport. The master to whom the excellence of the last

is due (Mr. Curtis) has now been promoted to the Normal College at the Borough Road, so that it may be desirable to reserve any more extended remarks upon it to another year, when the present teacher has had time to stamp somewhat more of his own individuality upon it. Of the other two I propose, however, to give some further account than can be gathered from the Tabulated Reports, partly as a just testimony to the teachers, and partly as an example to others of what can be done by perseverance and skill.

New Church schools in Manchester.

The New Church school in Manchester is held in a building, in proportion to the numbers, small, inconvenient, and furnished with very little of the *luxury* often to be found in our modern school-rooms. In spite of all these disadvantages, it has attained, by the perfection of the discipline and the skilful adaptation of methods more perhaps of a typal character than any other school I could mention as having come under my own observation. With an attendance verging nearly upon 300 boys; it is divided into seven sections, each furnished with a separate teacher (beside the head master), and each pursuing its own independent course as part of the general scheme. The most striking thing on entering is to see a school-room of which every square yard is actually occupied with scholars, and yet, on walking round, to find that there is not the slightest noise, confusion, or interference of one class with another; but that, in a comparatively small space studded with near 300 children, you can go from one circle to another and see or hear what every individual boy is doing, as though there were no other class in operation. This, I conceive, is mainly effected by having secured a fixity of attention, and a mental concentration on the work going forward, which leaves no time for restlessness, and no disposition for any activity, except quiet mental effort. The course of instruction, beginning with the lowest section, is exhibited in the following table :—

SEVENTH CLASS.

Reading.—Stories and questions on domestic animals and their uses, illustrated orally with print and drawing.

Object Lessons.—The object handed round the class, and and as the qualities are discovered by the children are written on the black-board. The pupils are taught to read the writing.

Arithmetic.—Notation, numeration, and addition taught combinedly in *one* lesson on the black-board.

Writing.—On slates only; chiefly figures and little sums.

Drawing.—On slates from simple copies, on black-board.

History.—Oral lesson by the pupil-teacher. Style, Bishop Peterborough's Little History, and Miss Corner's.

Geography.—Map of England. Oral lesson by pupil-teacher.

Home Lessons.—Write multiplication table and figures on slates.

Sixth Class.

Reading.—Irish National Board, Second Book and Sequel No. 1, Baker's Circular of Knowledge, No. 1, will be added as soon as the books ordered from the Committee of Council are received. Lesson illustrated by the pupil-teachers as far as possible.

Object Lesson.—As in the seventh class, only more enlarged.

Arithmetic.—As in the seventh class, only more extended, and on slates, with multiplication and subtraction added.

Writing.—On paper, quite rudimental.

Drawing.—As in the seventh class, only more difficult.

History.—As in the seventh class, more enlarged.

Geography.—Outlines of England and Wales by the National Society; map used. Additions by the pupil-teacher.

Home Lesson.—Write tables on slates and learn spelling.

Fifth Class.

Reading.—Irish National Board, Sequel, No. 2., to Second Book, and New Testament. Baker's Circular of Sciences, No. 2., will be added shortly.

Object Lesson.—As in sixth class; Mayo's Book.

Arithmetic.—On slates, four simple rules.

Writing.—On paper, large, round, and small.

Drawing.—On slates, from copy on black-board.

History.—Orally by pupil-teacher as in sixth class; extended.

Geography.—Map of the World, Little Treatise on the World, by the National Society.

Home Lessons.—Tables, spelling, on slates.

Fourth Class.

Reading, &c.—Irish National Board, Third Book, and New Testament; also, Sullivan's Spelling Book superseded.

Arithmetic.—Long division and four compound rules; four simple rules frequently practised.

Writing.—On copy-books; dictation on slates.

Drawing.—On slates; copies on black-board by pupil-teachers.

History.—Outlines by National Society, filled up orally by pupil-teachers on the leading events, &c.

Geography.—On maps generally; oral lessons by pupil-teachers, and written ones on the black-board.

Grammar.—Irish National Board Treatise, correct exercises, and parse simple sentences.

Home Lessons.—Geography, grammar, history, &c., written on paper.

Third Class.

Reading and Spelling.—Irish National Board, Fourth Book, and New Testament; occasionally Sequel to Fourth Book; also Sullivan's Spelling Book superseded.

Writing.—On paper, copy-heads, historical, &c.; dictation on slates.

Arithmetic—Simple proportion, practice, and interest; four simple and compound rules frequently practised.

History.—Summary by National Society, chief events enlarged upon by pupil-teachers; abstracts written.

Geography.—Irish National Board Compendium; maps generally.

Grammar.—Irish National Board Treatise; exercises corrected; sentences parsed and analyzed.

Home Lesson.—On paper, history, geography, grammar.

Second Class.

Reading and Spelling.—Irish National Board, Fourth Book; and Bible; occasionally Sequel to Fourth Book; Sullivan's Spelling Book superseded; shortly will be introduced Third Lesson Book, British and Foreign Society.

Writing.—On paper, copies historical, geographical, &c.; dictation and abstracts.

Arithmetic.—Double proportion, practice, interest, and vulgar fractions.

History.—Ince's Outlines; additions orally by pupil-teachers.

Geography.—Irish National Board Compendium; maps of the four quarters and particular countries.

Grammar.—Irish National Board Treatise; exercises corrected; sentences parsed and analyzed of a more difficult kind than in the third class.

General Lessons.—On natural phenomena, &c., orally by pupil-teachers, illustrated by sketches on black-board and diagrams.

Home Lesson.—On paper, geography, grammar, history, &c.

First Class.

Reading and Spelling.—Irish National Board, Fifth Book, and Bible; occasionally Sequel to Fourth Book; Sullivan's Spelling Book superseded.

Writing.—On paper, copies, historical, geographical, &c.; dictation and abstracts on slate and paper.

Arithmetic.—Higher rules, vulgar and decimal fractions, algebra, mensuration, book keeping. All the rules in commercial arithmetic shown by comparison to be adaptation of proportion.

History.—Ince's Outlines, chief events filled up by pupil-teachers, and general lessons given.

Geography.—Irish National Board Compendium; maps of particular countries used, and general lessons given orally by pupil-teachers on comparative geography, &c.

Grammar.—Irish National Board Treatise and Morell's Analysis; difficult sentences analyzed, and particular words parsed.

General Lessons.—On scientific subjects, illustrated by sketches on black-board and diagrams.

Home Lessons.—Grammar, history, geography, &c.

Note.—In the upper classes, each lesson continues about an hour, but the teacher is left in some degree to exercise his discretion, as it not unfrequently happens that a subject requires to be pursued to be realized. In the lower classes, the lessons are shorter and more frequent. The copy-heads are made to subserve intellectual culture, the sets being consecutively arranged and numbered.

The above scheme, it should be observed, is not the *proposed course* of instruction, but is the *real course*. No subjects are down on the plan which are not only not *attempted*, but none which are not diligently and effectively *pursued*, so as to get the anticipated mental training out of them. There is comparatively little learning by rote encouraged, beyond what is absolutely necessary; but every pupil-teacher is supposed to be perfectly master of the subject in which he undertakes to instruct the class, and to teach it from the fulness of his own experience. Hence, no text-books are usually employed as a help to the teachers' incompetency, but there is a certain amount of *freedom* allowed in the developing of every subject, by which a healthy intellectual action is secured both to the pupil-teachers and the scholars. There is no very elaborate

apparatus either for collecting or regulating *results;* but the results are looked for more than anything else in the mental activity and general intelligence attained by the scholars, after they have been duly subjected to the process of training marked out for them. There is no particular branch of study either which stands out prominently beyond the rest; but a careful digest having been made of the subjects, and the amount of work that can be really accomplished, the same, or nearly the same, average degree of excellency is attained throughout the whole.

Warrington British school.

The British school at Warrington, as remarkable, perhaps, *in its way* as the school I have just been describing, yet presents many points of contrast. The premises, in the first place, are incomparably better. There is a separate class-room for the higher division, a separate one for the lower, and a very convenient central school-room, fitted up with raised parallel desks, and duly divided by curtains. The number of boys in attendance is nearly the same as in the New Church schools, and the sectional division is also similar, with the exception of the lowest section being subdivided into three classes, as the children enter rather younger here than in the other case.

The general scheme of operations in the Warrington school is considerably *broader* than in that above described. In addition to the six standard subjects of primary education (reading, writing, arithmetic, geography, grammar, and history, all effectively pursued), the following collateral branches receive a considerable share of attention. First, drawing is taught throughout the whole school, on approved and scientific principles. The very youngest children are instructed to imitate plain lines and figures as soon as they enter, and as they ascend the various steps acquire a greater command of eye and hand, until a good number attain to a very considerable degree of proficiency. Every pupil-teacher, I believe, has *invariably* received a drawing prize every year since the system of prizes was commenced. Another peculiar feature in the school is the introduction of the *French* language. Two years ago it was commenced in the first class only, it is now introduced at the *third,* so that about 120 boys are receiving regular instruction in that language, the more advanced of which attain very creditable efficiency. The instruction in music is also very carefully planned and carried out, so that the exercises in class singing, as exhibited in those admirable class-books of Dr. Mainzer, are gone through with a good deal of precision.

The spirit with which the whole system of school instruction is carried on differs very considerably from the New Church schools. It proceeds on the principle of most carefully and

elaborately *registering results.* First of all, the pupil-teachers are each furnished with a slate having a strip of paper pasted down the left side, with the name of all the boys in his own class, and opposite each name are blanks for entries relating to every subject of instruction. The following is a specimen, as far as the first seven boys :—

8th Class Slate.	Writing.	Arithmetic.	Grammar.	Geography.	Conduct.	History.	Drawing.
Nathaniel Dickenson							
Peter Wilson - -							
Edward J. Forrest -							
Isaac Kenworthy -							
Thomas Pattison -							
Robert Clarke - -							
John Bolton - -							

At the close of every day the entries which have been made *here* are transferred to what is called the *class-sheet*, which is adapted to receive the entire class-statistics for a month. Annexed is a portion of such class-sheet as actually made out for the month commencing 25 August 1856.

From these data a monthly report is made out in the following manner :—The reading and geometry marks are given from actual examination, and any other subject not having a special entry on the class-sheet is carried to *conduct*, which is, indeed, a profit and loss account. The report is then made out in the following form, which is here shown as issued for the first boy on the class-list, and according to the data given :—

WARRINGTON EDUCATIONAL SOCIETY'S BOYS' SCHOOL,
NEWTON STREET, WARRINGTON.

MONTHLY REPORT of the Attendance, Progress, and Conduct of NATHANIEL DICKENSON, a Pupil in the Eighth Class, for the Month ending 19 September 1856.

(Of the written letters, E. means excellent, V. very good, G. good, F. fair, M. moderate, U. unsatisfactory, B. bad.)

Absent - -	13 times.	Grammar - -	M.
Late - - -	1 time.	Geography - -	U.
Reading - -	F.	History - -	M.
Writing - -	F.	Composition - -	U.
Arithmetic - -	B.	Drawing - -	G.
Mensuration - -	F.	French - - -	M.
Algebra - -	F.	German - -	—
Geometry - -	F.	Conduct -	Unsatisfactory.

Parents are requested to examine this report minutely and to preserve it. It is made out with great care, costs great labour, and, it is believed, states everything with the utmost accuracy.

(Signed) E. BREWTNALL, *Head Master.*

8th CLASS SHEET.—25 August 1856; I. F. Garnet, Assistant.

Attendance and Payment of School Fees.

A blank, present in time; a half stroke, late; a whole one, absent; red ink mark, reason of absence; ✓, paid fee on Monday morning; Q, paid fee quarterly.

Transfer of Slate Marks for Day.*

* *Note.* Let the following represent one of the above squares enlarged; the figures have the meaning assigned, according to their position.

Writing.	Drawing.	Geography.
Mathematics.	French.	History.
Grammar.	Dictation.	Conduct.

The report-marks are decided by the totals on the class-sheet according to the following scale:—

Once-a-week subjects, as French, mensuration, algebra.

11 or 12 marks	- Excellent.	3 or 4 marks	- Moderate.
9 or 10 „	- Very g	3 „	- Unsatisfactory.
7 or 8 „	- Good.	2 „ or less,	Bad.
5 or 6 „	- Fair.		

Twice-a-week subjects, as history, arithmetic, drawing, dictation.

24 marks	- Excellent.	9 to 12 marks	- Moderate.
21 to 23 „	- Very good.	5 to 8 „	- Unsatisfactory
17 to 20 „	- Good.	1 to 4 „	- Bad.
13 to 16 „	- Fair.		

Thrice-a-week subjects, as grammar and geography.

36 marks	- Excellent.	13 to 18 marks	- Moderate.
30 to 35 „	- Very good.	7 to 12 „	- Unsatisfactory.
25 to 29 „	- Good.	1 to 6 „	- Bad.
19 to 24 „	- Fair.		

Daily subjects, as writing, conduct.

60 marks	- Excellent.	20 to 29 marks	- Moderate.
50 to 59 „	- Very good.	10 to 19 „	- Unsatisfactory.
40 to 49 „	- Good.	0 to 9 „	- Bad.
30 to 39 „	- Fair.		

In addition to this monthly report, a thorough examination is also made monthly of every pupil individually on every subject he is learning, and extending over the whole ground gone over in each subject during the previous month. On the first introduction of this examination the master did it himself, spending half his time upon it, or a fortnight out of the month. After the plan had become somewhat familiar, and its details were settled, the assistant took part, and the work was then got over in half the time. As, however, the apprentices have become sufficiently intelligent and trustworthy. they have each been employed to examine the class next below their own. As the supply of new pupils to each class mainly comes out of the class below, this fact is an additional guarantee that the examination will be faithfully made by the teacher of the class *above*. In each class an examination paper, recording all the results of the examination, is made out in the following manner:—

MONTHLY EXAMINATION of the Seventh Class, 19 September 1856.

	1. READING. Fourth Reader. pp. 34, 64. 70, 74, 80.	2. WRITING. 3 Excellent. 2 Fair. 1 Moderate. 0 Bad.	3. ARITHMETIC. All Rules to Practice, with Compound Proportion. Tables of Weights and Measures, and 20 × 20.	4. GRAMMAR. Page 19 to 22, Irish Grammar, and Parsing of any Sentence.	5. GEOGRAPHY. Pages 102 to 104, Irish Geography, with Map of Europe.	6. HISTORY. Besides all this, there is a very elaborate system of marks adapted to the pupil-teachers, so that every lesson they bring up is duly registered. A summary of them is then made out at the month's end, and a grand total at the year's end, when the style of their certificate on the Government forms is made to correspond with the results then shown of their entire year's industry and conduct. It may easily be imagined that such a system of registration and examinations must keep the whole machinery of the school going well nigh at the top of its speed. It will also be observed that the progress of each boy, and of the school as a whole, is estimated by definite and measurable, rather than by indefinite and immeasurable results. In the New Church schools no such definite register is kept as to how each day's lesson is done; and it would, probably, be justly urged by the teacher, that such a register would be no valid measure whatever of intellectual progress. Lessons, he might say, are only so much scaffolding, but form no part of a boy's intellectual superstructure. Lessons may be repeated, and even problems performed, with faultless accuracy, and yet the subject to which they relate may take no hold on the intellectual nature of the child. Hence the one cannot be taken as any indication of the progress of the other, and need not to be registered except as they register themselves in their appreciated intellectual results. On the other hand, it might be urged that the nature of the child is inclined to indolence, that he wants a constant incentive to definite labour, and that all possible care must be taken with the scaffolding, as a means for ensuring steady progress in the building itself. All we can say to these arguments is that each man must follow his own idea as to the nature and processes of education; and is more likely to succeed in doing so than in adopting anything foreign to his own habits of mind and thinking. Where the results, moreover, are such as are exhibited in both of the above-mentioned schools, there is little room left for any very stringent criticism.

If I were called upon, however, to pronounce any opinion on the matter, I should myself yield the preference to the more purely intellectual method, it being presupposed that order, regularity, and systematic work are secured in connexion with it. In the two instances now under consideration, the Warrington school certainly presents the *broadest* outline, and combines in it the greatest *variety* of advantages; but in the main subjects which form the *basis* of a primary school education, and on which the intellectual development of the children mainly turns, the palm is certainly due both in *methods* and in *actual results* to the other. They both of them, however, present specimens of the primary school which

we may term, in a certain sense, *typal*. Teachers there will always be who follow more closely the formal and others who follow more closely the free and intellectual route. Both in their several ways may bring their schools up to a very high degree of perfection; the matter in the one case growing eventually out of the form, and the form in the other case being moulded by the matter. The day, I trust, may not be far distant when an abundance of schools offering as much material for remark and criticism will be scattered through the country at large. Assuredly, if we could pass the whole mass of society to its lowest strata through such a crucible, it *must* come out so far refined as to render any relapse into positive ignorance and brutality simply impossible.

I have the honor to be, &c.

J. D. MORELL.

To the Right Honorable
The Lords of the Committee of Council on Education.

APPENDIX.

SUMMARIES OF TABULATED REPORTS, FOR 1855–6, ON SCHOOLS INSPECTED BY J. D. MORELL, ESQ.

GENERAL REPORT, *for the Year* 1856, *by Her Majesty's Inspector of Schools,* MATTHEW ARNOLD, Esq, M.A., *on the* BRITISH SCHOOLS, *and the* WESLEYAN *and other* DENOMINATIONAL SCHOOLS, *inspected by him in the* MIDLAND, METROPOLITAN, *and* SOUTH-EASTERN DIVISION *of* ENGLAND.

MY LORDS, London, January 1857.

I HAVE the honor to present to your Lordships my General Report for the past year.

Limits of district.

The limits of my district still remain the same as they were at the date of my last general report; but the number of schools claiming inspection has increased so greatly that I have again been compelled to apply to your Lordships to contract its bounds. As this may possibly, therefore, be the last opportunity which I shall have for speaking of the schools in the more distant and outlying parts of it, and as the condition and development of these schools appear to me to merit record, I am desirous of taking this occasion to offer some remarks upon them.

Schools in South Staffordshire and in Midland Counties.

The schools which I speak of are chiefly those situated in South Staffordshire, a part of the country which formed the nucleus of my original district, but which forms nearly the remotest portion of my present district, the centre of which is London. They are, however, among the schools in my district with which I am best acquainted, as they have been under my inspection from the date of my appointment, and most of them I have visited not less than five times. The observation of them, and of schools in the adjacent Midland Counties, has supplied me with the best experience that I have as to the growth of schools and the fluctuations in their condition.

General rules respecting causes of growth and decay of schools.

The chief result of this experience has been to establish the conviction that the general rules which one so often hears others lay down, and which one is so often tempted oneself to lay down, respecting the elements of growth and decay, of efficiency and inefficiency in this or that class of schools, are unsound, or at least that they admit of so many exceptions as to be practically of little value. The hasty generalisations to which the observer is led by the first contemplation of the present system of elementary schools in England are perpetually being corrected; life appears at isolated points where one least expected to find it; decay takes place where one entertained least apprehension of it.

Open to continual exceptions.

Instances o these.

I have sometimes thought, for instance, that schools not especially connected with any religious body, whose fortunes it might partake and in whose permanence it might share, had a natural tendency, when the first impulse which led to their

establishment had died away, to be neglected and to decline. With a constant enemy to contend with in the sectarian tendencies of the English people, with the constant danger, while they had no perpetual official promoter like the clergyman, of losing their original promoters by death, removal, decay of zeal in what was from the first a purely voluntary labour, or from other causes, these schools seemed likely to run a certain course, and when they had exhausted the special impulse which set them in motion, gradually to slacken speed and at last to stop. But I have seen schools of this kind, which appeared to be approaching the last stage of their course, recover themselves suddenly and start afresh. I have seen, for example, the Leicester British schools, the vitality of which, when first I visited them, seemed exhausted, renew themselves entirely, and rise within a space of two or three years to be perhaps, on the whole, the most flourishing schools under my inspection. I have seen the old Lancasterian school at Derby, which had existed and thriven before most of the National schools in Derby were built, gradually dwindle as National schools arose in its neighbourhood, and attracted to themselves, each in its own quarter, many of the scholars of the Lancasterian school; then, although the same causes continued to operate, the same National schools, each with its force of local influence, to exist around it as so many attracting powers to draw away its scholars, I have seen this school regain its numbers and efficiency, and draw back its scholars from the very institutions which had for a while deprived it of them.

Leicester B.S.

Derby B.S.

Half-time schools.

I have sometimes thought, again, that in schools where the bulk of the children were half-timers, the school-work was necessarily inferior in neatness, finish, and accuracy, to that of the children in schools where the half-time system is not in operation, and where the scholars had the benefit of a longer daily practice in their work. But in the British school at Milford, in Derbyshire, I found a school of half-timers where the school-work is eminent for these very qualities of neatness and finish, and may vie in these respects with that of the best schools, of whatever class, under my inspection.

Milford B.S.

Force of local circumstances under present system.

The fact is that at the present moment all is so undetermined in England with respect to public education,—one system, one body of persons is so little in possession of the entire field,—that everything depends, in each locality, on special local circumstances, which are continually changing, and on individual agencies, which cannot be calculated beforehand. Public education is perhaps too vast a matter to be advantageously left to these individual agencies; but, where it *is* left to them, it is absolutely necessary to take into account their inherently fortuitous and independent character. It is necessary to leave

each of them to produce freely its natural fruits, without attempting to prejudge its character and chance of success.

Efforts of Wesleyan Methodists in promoting schools in South Staffordshire.

Amongst the local efforts for the promotion of public education which I have witnessed in my district during the last five years, none, perhaps, is so remarkable as that which the Wesleyan Methodists have been making during that period in South Staffordshire. In no part of my district, except in London, are the schools under my inspection so thickly scattered; in none are they so well attended; in none have they multiplied so fast and improved so rapidly in efficiency. Mr. Tremenheere's Reports on the state of the mining population have sufficiently made known the moral and social condition of the working-classes in South Staffordshire; and, while that condition is such as it is there described, the elementary schools in that part of the country will not, as a body, be equal to the best elementary schools in other parts of the country. The home education of the children must make itself felt. But that these South Staffordshire schools have attained, as a whole, the thoroughly respectable and satisfactory condition in which I now find them, a condition of efficiency quite out of all proportion with the barbarism of the district in which they are found, does infinite credit to the zeal of their promoters and to the labour of their teachers, and cannot fail in the end to tell powerfully upon the civilization of the neighbourhood. When first these schools came under my inspection in 1851, the rate of attainment which I found in them was far lower (with one or two striking exceptions) than that which I found in any other part of my district; it was so low that, in order to obtain pupil-teachers here at all, I was in many cases forced to recommend the admission of candidates whose deficiencies would elsewhere have ensured their instant rejection. The rate of attainment in these schools generally is now, as I have said, equal to that of respectable schools in the best parts of my district; I am enabled to demand the same proficiency of candidates for apprenticeship here as elsewhere; the actual apprentices perform, with credit, the same examination as others. And the new aspect of the school buildings (often, with the neighbouring Wesleyan chapel, the only considerable edifices, except the furnaces, in their locality) sufficiently indicates how recent is the effort which has produced these results. At Tipton, at Ettingshall, at Wednesbury, at Oldbury, at West Bromwich—in the thickest seats of the population—these schools have arisen, and are still seen arising; and, in their establishment, Wesleyan Methodism has performed a most important service to morality and civilization.

School organization. Plans of fittings.

In nearly all these schools the fittings adopted are more or less in conformity with the Battersea plan, which, as I have

stated in former reports, appears to me, of those at present in use, by far the most convenient. In some cases they are entirely in accordance with this plan; in others they approach more nearly to the plan followed in the model school of the Wesleyan institution at Westminster, a plan which is a modification of the Battersea system, designed to meet the requirements of Wesleyan schools in respect of large galleries and collective instruction. But I constantly observe that, although a sound plan of fittings may have been adopted, the teacher has not organized his scholars in accordance with that plan, and that the *organization*, therefore, of the school remains imperfect, although its *fittings* may have been made all that can be wished. In these cases the managers have done their part, but the teacher has not yet adequately performed his. It is, indeed, a matter of some difficulty at once to organize a body of children in accordance with a plan which was not in use at the institution where the teacher was trained, and it is a very venial shortcoming to have failed in at once doing this perfectly; but the excellence of this plan of fittings is that it is so simple and so precise that, in a school where it has been adopted, the mode of arranging the scholars in conformity with it suggests itself at once to the eye, and it seems as if a school so fitted would almost organize itself, if the teacher would allow it. The failure is generally in the following particular; *the divisions do not correspond with the groups of desks;* one division considerably overlaps its own group of desks and invades the next group, another division does not half fill its own group. In fact, the scholars have not been re-organized to meet the requirements of the new plan, but the same division of them is continued which was in use before the improved plan of fittings was introduced. Teachers must not forget that the excellence of the Battersea plan consists in this—that it facilitates the establishment of a system of *uniform clearly defined classes;* and, if the facilities which it offers for doing this are not taken advantage of, the mere introduction of a number of new desks and benches into a school is of no great benefit. The reasons generally alleged by teachers for not making their divisions correspond with the groups of desks may be reduced to two main points; one, that the scholars are of such different degrees of attainment that they cannot be classed in bodies of uniform number; the other, that the want of a sufficient supply of pupil-teachers compels them to enlarge, beyond measure, certain divisions, that they may have the benefit of the superior instruction of the pupil-teachers, and to contract beyond measure other divisions, that as small a body of scholars as possible may be subjected to the inferior handling of monitors. With regard to this

Want of correspondence between school divisions and groups of desks.

Reasons alleged for this.

second point, it is true that a group of desks will not properly accommodate more than from twenty-five to thirty scholars, and that, in schools where the allowance of pupil-teachers does not exceed one to every forty scholars, the allowance is inadequate to meet the requirements of the Battersea plan of fittings. But your Lordships have now put it in the power of every school which has had pupil-teachers for five years, and can therefore send up candidates for Queen's scholarships, to have an increased allowance of apprentices, at a rate which corresponds very nearly to the number of scholars contained in each group of desks; and, even in schools not enjoying this increased allowance, it is far better, in my opinion, to divide regularly all but the youngest and least advanced children into classes corresponding with the groups of desks, and to throw together the youngest children into one large body, capable of being chiefly taught on the gallery, by collective methods and under one teacher, rather than to divide the whole school from top to bottom in an unsystematic manner, which generally leaves the largest bodies of scholars at the top of the school, and the smallest at the bottom. With regard to the first-mentioned point, namely, the different degrees of attainment of the scholars, alleged as a bar against combining them in equal bodies, the answer to this is the same as the answer to the objection urged against the plan of retaining the scholar in the same class for all parts of his work. In both cases the answer is, that, uniform bodies can be formed of scholars having a *sufficient* degree of correspondence in their attainments to render their working together perfectly practicable, and that far greater advantages result to the *discipline* and *training* of the scholar from placing him in a system of uniform, clearly defined classes, than result to his *instruction* from placing him in a system where the different shades of proficiency are made the basis of the organization of the scholars, and where the classification is as various and as little uniform as are the attainments of individuals.

Alleged reasons examined.

The improvement in fittings and accommodation in the schools under my inspection in Birmingham has not been less great, during the last five years, than in those of the neighbouring district of South Staffordshire. With regard to some of the Birmingham schools, also, the remarks apply which I have made as to the failure of teachers to take full advantage of the improved system of fittings introduced into their schools. I may, however, mention the Tennant Street girls' school, in Birmingham, as a model of good organization, no less than of convenient fittings. Several of the schools in Birmingham have been entirely rebuilt during the period of my connexion with them; and I can truly say that there is not one of them

Schools in Birmingham.

in which sincere and useful efforts are not, to the best of my belief, being made to promote the education of the poor. I may mention particularly the school in Hurst Street, in connexion with the Unitarian Domestic Mission, as a school which draws the bulk of its scholars from among the children of the very poorest class, the most fitting objects of State assistance, rarely found in such numbers in the other British and Wesleyan schools which I visit. But much, I believe, of what is accomplished in Birmingham for the elementary education of the poor is accomplished by those who are opposed to Government inspection, and has not fallen under my notice. I am unable, therefore, to speak with so much knowledge of what has been done in Birmingham as of what has been done in South Staffordshire, where nearly the whole of the schools for the poor lately established, except those established in connexion with the Church of England, have been established by Wesleyan Methodists, where such schools bear a far larger proportion to the number of Church of England schools than in any other part of my district, and where they have, with hardly an exception, been established and carried on in cordial co-operation with the Committee of Council.

Schools in London: improvement during past year.

I cannot conclude this Report without recording my satisfaction at what has been accomplished in the repair, refitment, and re-organization of the schools under my inspection in London, during the past year. In my last Report I spoke unfavourably of the London schools in these respects. Some of them, such as the Wesleyan school in Great Queen Street, continue to deserve that unfavourable mention; but I am bound to say that the great number of them merit it no longer. As I visited one of them after another in the course of last summer, I had perpetually the pleasure of finding a school which I had known dirty, ill furnished with fittings, and in bad repair, now wearing a totally new face. Some, too, even of those which were best provided before, had actually transformed themselves by additions and improvements: and amongst these last it is but just to mention the great Jews' free school in Bell Lane, in the improvement of which no cost and no pains have been spared, and which has been now reconstituted on a scale worthy of its great resources and of its wide sphere of usefulness.

I have the honor to be, &c.

M. Arnold.

To the Right Honorable
The Lords of the Committee of Council on Education.

* The number of schools inspected during the year was 113; but from 6 of these no sufficient returns of income and expenditure have been received.

† Exclusive of Government grants.

GENERAL REPORT, *for the Year* 1856, *by Her Majesty's Inspector of Schools,* J. BOWSTEAD, Esq., M.A., *on the* BRITISH SCHOOLS, *and on the* WESLEYAN *and other* DENOMINATIONAL SCHOOLS, *inspected by him in the* SOUTH-WESTERN DIVISION *of* ENGLAND, *and in* SOUTH WALES.

MY LORDS, January 1857.

Inspection assisted by Mr. Laurie.

THE number of schools claiming annual grants in my district having outgrown the power of one Inspector to visit and report upon them all within the compass of a year, besides attending to his other official engagements, I received permission in the course of the past summer to seek the aid of my colleague, Mr. Laurie, and commit to him the inspection of the British and Wesleyan schools established in Cornwall. Mr. Laurie's remarks upon these important and interesting schools, twenty-two in number, will be found appended to my Tabulated Reports. His timely assistance was of great value to the district, and I feel personally indebted to him for so readily according it, as well as to your Lordships for sanctioning the arrangement.

Schools too numerous for one Inspector.

With Mr. Laurie's help, 231 distinct schools, belonging to 151 institutions, and containing 27,855 children actually present, were examined and reported upon within the year ended on the 31st of August last. My own share of this work embraced 209 schools in 133 different localities; and, in order to accomplish it within that portion of the twelve months which could be devoted to the visiting of schools, I found it necessary in many instances to proceed with a degree of rapidity hardly consistent with the aim to do full justice to the labours of the teachers engaged. Upon reference to my diary, I find that in the five school days of one week, during the past year, I examined schools containing 2,243 children actually present, whilst in another week the corresponding number was 1,564, in another 1,532, in another 1,431, and in three others above 1,100. The haste implied by these figures can only be appreciated on considering that the schools to which they refer, so far from lying conveniently near to one another, are scattered over 18,000 square miles of irregularly shaped territory, stretching from Surrey on the east to Cornwall in one direction and Pembrokeshire in another on the west. This haste was the indispensable condition of punctual payments, and to pass somewhat cursorily through the schools for once seemed a less evil than a long array of grants in arrear. But I venture to submit to your Lordships that superficial inspection is a great evil in itself; that, in order to be permanently beneficial, examinations must be deliberate

and searching; and that no Inspector can answer for the real progress of the schools under his superintendence, whilst he feels himself unable to devote to each as much time as any peculiarity in its condition may require. Two years ago my district contained 159 schools receiving annual aid; it now contains 209. It had then 329 pupil-teachers; it has now 525. The annual business of the district at that time afforded ample occupation for a year; that business would now demand eighteen months for its satisfactory discharge by a single Inspector. I trust, under these circumstances, that I may be pardoned for humbly but earnestly soliciting to be speedily relieved from the charge of some portion of the schools now claiming my attention.

Simple inspection cases neglected.

It has resulted from the increase of schools seeking aid in the form of annual grants that the time devoted to those schools in which no grant towards their support is desired, but which are open to inspection in consequence of previous grants towards the cost of erecting buildings or laying in a supply of books and apparatus, or in consequence of the managers' invitation, has gradually decreased and become at length altogether insignificant. The few schools of this class which I have been able to visit during the past year have, with the exception of one special case, either been connected by identity of management with others in which grants were due, or have been situated so near to aided schools as to admit of being visited on some spare half-day at the close of a week without material loss of time. That part of an Inspector's work, therefore, which consists in breaking new ground, in introducing the machinery of the Education Department to localities in which it was before unknown, has, of late, in my case, from unavoidable circumstances, been entirely passed over.

Additional schools coming under inspection.

Fresh schools have, nevertheless, continued to put forward their claims to public support with as much frequency as heretofore; and, indeed, within my limited experience, there has never been a time when the signs of progress were so marked as they are at present.* The schools now awaiting a first inspection are unusually numerous and important, the interest felt in the public measures for promoting popular education is perceptibly on the increase, and the disposition to co-operate

* It is a particularly encouraging symptom that the working people themselves are taking a part in the establishment of Schools. At one set of works in the South Wales District, the mere working classes have contributed 76*l.* 5*s.* 6*d.* towards the cost of a school-room now in course of erection, with Government aid; the number of contributors being 521, and the sums varying from 2*l.* to 3*d.* At another, the workmen have lately petitioned the proprietor to deduct a poundage from their earnings, and therewith establish and maintain efficient schools for their children; and I am happy to add that this petition has been most liberally responded to.

with your Lordships is manifesting itself in quarters where such sentiments were, until lately, but little to be expected.

Many causes concur to produce these results. I will allude particularly to two, not as being the most important, but because they have produced striking effects in my district. Causes of increase.

And, first, I will speak of the capitation grants, the establishment of which, followed by their extension to "all parts (urban as well as rural) of England and Wales," by the Minute of 26 January last, has been felt by many promoters of education to be the greatest boon yet conferred upon them by Her Majesty's Government. These grants, depending as they do upon a certain amount of attendance on the part of each child on whose account they are claimed, exactly meet two wants most acutely felt in our schools. They afford, in the first place, a much needed addition to the school funds; and, secondly, when made the source of a judicious system of rewards, they place in the hands of the managers and teachers a new engine for securing that prime requisite of a good school, regularity of attendance. Capitation grants.

Capitation grants have had three years' trial among a portion of the schools with which I am connected, and I have seen no reason to be dissatisfied with their effects. It was anticipated by some that they would cause a diminution of voluntary contributions towards the support of schools; but no symptom of any such result is presented by the returns obtained from the managers and annexed to my successive annual reports. At the close of 1854, the voluntary contributions towards the support of 103 scholastic institutions were stated to amount to 4,643*l.* 18*s.* 8½*d.*, which gives an average of nearly 45*l.* 1*s.* 9*d.* for each institution. Next year the number of institutions to which the returns referred was 126, the sum total 5,745*l.* 11*s.* 2½*d.*, and the average for each about 45*l.* 12*s.* This year the number of institutions is 139, the gross amount 7,445*l.* 9*s.* 3¼*d.*, and the average 53*l.* 11*s.* 3*d.* These returns have been obtained in three successive years, as nearly as may be, from the same schools; the 139 schools of this year including nearly all the 126 of last year with some fresh ones in addition, and the 126 of last year including in like manner the 103 of he preceding year. The result is that the amount of voluntary contributions appears to have increased both absolutely and relatively, and more rapidly in the past year than in that which preceded it. Voluntary contributions not falling off.

I may venture, therefore, to indulge the hope that, in my district at least, the capitation grant is not becoming a mere substitute for the subscriptions of individuals, but is rather destined to be the means of procuring for the schools those appliances which are still required to render their equipment Grants not mere substitutes for subscriptions.

complete, and the want of which up to this time has only been tolerated out of consideration for the difficulty of procuring funds. My own communications with the patrons of schools would undoubtedly lead me to the conclusion that the grant had generally been received in this spirit. At the same time the prospect of obtaining this grant, and of being thereby enabled to support schools more easily, has undoubtedly had a powerful effect in inducing promoters of education to connect their operations with your Lordships' plans.

Agency of British and Foreign School Society.

The second cause to which I wish to refer, as having greatly extended the field of action of the Minutes of Council during the past year, is the agency of the British and Foreign School Society. This agency, of course, leaves the Wesleyan and some other classes of schools altogether untouched; but schools on the British plan form by far the most numerous class falling under my supervision, and so many of them are prevented by the scruples or want of information of their supporters from claiming public aid, that any movement which tends to bring them under inspection must necessarily exert a large influence over the district. A movement having this result, though not primarily intended to produce it, has been undertaken by the committee of the British and Foreign School Society, and I have recently had many opportunities of observing the good effects produced by the visits of their agents. Mr. Baxter is the society's inspector, whose proceedings in England and also (in conjunction with Mr. Roberts) in part of South Wales, have fallen most particularly under my observation, and I have pleasure in expressing my belief that his judicious counsel and stimulating influence are rapidly raising many languishing and neglected schools to a state of energetic action, and inducing their promoters to secure their permanent efficiency by freely adopting all the means of support and improvement placed within their reach by the Minutes of Council.

Its advantages.

For an agency of this nature the British and Foreign School Society enjoys peculiar advantages; it stands in a neutral position between the Government and the public, and its representatives meet with ready admission into many schools from which a bigoted adherence to the voluntary principle might exclude Her Majesty's Inspector.* It is much to be desired, therefore, that this society should send forth a complete staff of organising inspectors, able and willing to re-animate

* I annually pass near a small British School in Monmouthshire which has the words "*Non delegatus admittitur*" carved in solid masonry over the door. Notwithstanding this threatening inscription, which is *supposed* to be meant as a warning to your Lordship's representative, I learn from one of the Society's agents that I am not unlikely to receive an invitation to enter.

the many drooping British schools that are scattered over the country, and exterminate the many errors and prejudices that still prevail with respect to educational matters generally and your Lordships' measures in particular.

Average age of school children still decreasing.

The summaries appended to this report, and prepared in the statistical department of your Lordships' Office, are this year fuller and more complete than usual. They show that the average age of the children, attending the schools which I inspect, continues to decrease. Taking the basis of comparison which I have adopted in each of my last two reports, it appears that the per-centage of children *under* ten years of age has risen during the past year from 66·94 to 68·62, whilst the per-centage of those *over* ten years has fallen in proportion from 33·06 to 31·38. The mischief, therefore, arising from a too early removal of children from learning to labour is still upon the increase.

Increase of scholars and teachers.

On the other hand, it is gratifying to find that the schools have been fuller during the past year than they were in 1855. Taking one school with another, the average attendance has risen from 91 to 104, whilst the attendance on the day of examination has increased from 104 to 120. The number of certificated teachers at work in the district has also progressed from 100 to 135, and the number of pupil-teachers from 475 to 525.

Results of teaching.

With respect to the character of the schools referred to in these summaries, it must be remembered that nearly all I visit are schools in which the pupil-teacher system is at work. These schools have an unusually large and able teaching force, and enjoy other peculiar advantages. They are, in fact, or at least they ought to be, the model schools of the country. It is to be expected, therefore, that the work which they do should generally be well done, and that the estimate formed of them should be, on the whole, a high one. I find, accordingly, that out of 185 *juvenile* schools (infant schools are not included in this return) I have reported *reading* to be *well* taught in 105, writing in 110, and the simple and compound rules of arithmetic in 107. For geography (a favourite subject) the proportion is still higher; for grammar and history, it is a good deal less.

Difference between aided and unaided Schools.

Had any considerable fraction of the schools been such as are visited for the purpose of inspection alone without receiving grants, the result would, doubtless, have been very different. The few schools of this latter class which I inspect are almost invariably, in point of attainment, far below the average of annual-grant cases, and I have reason to think that this state of things is general throughout the country. There are, indeed, within my own knowledge, some brilliant exceptions to

this rule ; but I believe it, nevertheless, to be all but universally true, and I am persuaded that this view will be confirmed by a comparison of my returns with those of any of my colleagues whose labours happen to comprise a large number of simple inspection cases.

Effects on after lives of scholars.

Regarding, then, the schools included in the summaries as being in the very first rank of elementary schools in the country, their progress may, perhaps, be considered satisfactory on the whole, but certainly not more so than the public is entitled to expect from the advantages they enjoy. The best among them are far from being perfect; and if their whole work be viewed with reference to its effects upon the rising generation, how much remains to be accomplished! Hear the testimony of a dispassionate and most competent witness with respect to the state of things among one important class of our population :—

> "What is now, by universal consent, in all but a very few and very favoured localities, the mental condition of the very great majority, probably at least three-fourths of the boys and young men in the coal-mining districts, who have passed through the excellent schools that are now everywhere accessible to them, and gone to the work and occupation of their lives? Within two or three years after they have left school, they are found to have lost nearly the whole of the little ever learned ; they cannot read in a manner to profit by or to take the least pleasure in reading; they cannot understand the common language of books; they cannot write a letter; they are unable to do a simple sum in arithmetic. Except, therefore, for whatever amount of moral influence may have been exercised over, and impressed itself upon, their characters during their short and desultory attendance at the day schools, which they leave generally between the ages of eight and ten, seldom staying till after eleven, their so called education amounts to next to nothing; and the liberal expenditure of employers and the Government in providing good school-houses and well trained masters and mistresses has been, practically, all but thrown away."

Mr. Tremenheere's testimony.

This is an extract from the last Report (1856) of Hugh Seymour Tremenheere, Esq., upon the state of the population in the mining districts ; but the truth, which it sets forth so forcibly, is not, by any means, confined to that class of the community. The complaint is general, that the education bestowed at so much cost upon the children of the working-classes leaves no adequate trace upon their after-lives. Many, no doubt, expect from education much more than it is capable of effecting ; but Mr. Tremenheere is not likely to be one of these, and such statements as his, supported as they are in the course of his report, by reference to specific facts and local knowledge, deserve to be met by something better than a counter-charge against the unreasonable hopes of educationists. We should, at least, inquire whether we are doing all that is practicable, and whether, in all that we do, we bear in mind the true end at which we ought to aim.

How to make self-educators.

It has been well laid down by one of my colleagues that we should aim to turn out, "not an educated boy, but a self-educator." To attempt to send forth thoroughly educated boys from our elementary schools, where the whole time spent at school by each boy seldom exceeds two, or at the most, three years, and he generally leaves school altogether at the age of eleven, would, indeed, be hopeless. But to give him so much knowledge as may inspire a desire for more, and to impart to him sufficient facility in the arts of reading, writing, and ciphering, to enable him to make further acquisitions without too painful an effort—these objects seem more within our reach, and they are, happily, the very results which it is most important to attain.

Teaching should be practical.

The course of study most conducive to such ends need scarcely be made a subject of discussion. The question has been settled by the common voice of the country, and we are unmistakeably committed to a system of useful and practical teaching—a system which endeavours to make every lesson of the school-boy bear upon the subsequent career of the man. This kind of teaching I have felt it my duty to encourage and to recommend throughout my district, and I could point to not a few schools in which it is carried out with striking success. By means of it, children become interested in the qualities and condition of the things around them; every passing object is made to suggest inquiry and thought; the stores of information laid in at school are referred or added to, in order to trace home some new idea; and thus habits of self-culture grow almost insensibly.

Elementary schools different from universities.

There is, no doubt, much to be said for the method of education heretofore pursued in the great universities of England—a method which almost confines the attention to some one branch of study, and aims chiefly at mastering that one thing thoroughly. For a class of society in which direct instruction is continued up to manhood, and ample opportunities, not dependent upon school or college, are afforded for acquiring general knowledge before the serious business of life begins, this may possibly be the wisest mode of proceeding. Those, at least, who advocate an opposite system in our primary schools, are not concerned to deny that it may be so. They need only point to the totally different circumstances of the two cases, and inquire how it is possible that a boy, who attends school irregularly for not more than two or three years, and leaves it finally at the age of eleven, can be made to master any one subject of study thoroughly.

University system not suited to children of working classes.

But suppose that, by confining his attention to some one subject, such as grammar, he can be made a tolerable grammarian; will that compensate him for his total ignorance of

the earth he lives upon, of the history of his own species and country, of the laws of matter and of motion by which he is surrounded? Will he find grammar among his daily occupations in the field or the factory? Will any process of self-culture be likely to receive development from the circumstances in which he is placed? He may, indeed, be able to express himself well, verbally or on paper; but what will he have to write or talk about? His home, unlike that of the youth who goes to the university, will have taught him next to nothing. His knowledge of words, unaccompanied by any acquaintance with things, will be useless; and the one faculty which he has cultivated, will soon wither away from want of use, thus reducing him once more to the condition of an uneducated being.*

nor acceptable to their parents.

Such a mode, then, of conducting elementary schools, would be eminently useless to the class of children that attend them. It would not even attempt to prepare them for the business of their lives, and it would not be likely to facilitate the acquisition of habits of self-improvement. Neither would it be acceptable to their parents, whose want of appreciation of the benefits of education forms already so serious an obstacle to its progress. It is a constant complaint among this class of persons that our schools do not teach the things which their children would find it most useful to know; and if, instead of attending to this complaint, we render our teaching more abstract and less practical, more pedantic and less directly useful, we shall assuredly add greatly to an evil which is already far too prevalent.

Common things.

Considerations of this kind may well serve to reconcile us to that teaching of "common things," which has of late obtained so firm a footing amongst English educationists. If such teaching be not theoretically perfect as a means of intellectual training, if it be not calculated to develope the faculties of childhood in the most philosophical order, it is at least adapted to engage the sympathies of working men, and to store the minds of their children with that sort of knowledge which they will most need when they become workers in their turn. It meets their first and most pressing want. It bears early fruit, and thus avoids the risk of being lost before it is called into action. It connects the exercise of the understanding with familiar objects, and, in return, things the most simple become a source

* It is far from being intended to depreciate the study of grammar *in connexion with* other subjects. On the contrary, I am sensible that some practical knowledge of the rules of grammar is essential to correct writing or speaking just in proportion as the learner is habitually exposed to hear incorrect language; and therefore the teaching of grammar is *most* needed in the *most* elementary schools. But I contend that the cultivation of childrens' faculties by *exclusive* attention to the study of language, or of any other single branch of knowledge, is specially unsuited to the present circumstances of the working people of this country.

of inquiry and reflection. Thus faculties once developed are not left to rust from want of exercise, and the education of the individual is not only kept up but progresses.

Industrial schools.

In the Appendix to this report will be found some particulars relating to a school of industry at Ockham, in Surrey. Ockham is about five miles from the Weybridge station, on the South-western line of railway. This school, though maintained at an annual cost of about 1,300*l.*, appears to be self-supporting, and is one of the most remarkable and successful experiments of the kind I have ever met with. I am anxious, therefore, that those who are contemplating the establishment of industrial schools in other parts of the country should have this institution brought under their notice as an example worthy of imitation. (*See Appendix* B.)

Home lessons;

But it is not enough that the subjects of instruction be well chosen and suited to the circumstances of the case. Children will not be made self-educators by any mere lessons given to them on a gallery or in a class. They must not only be recipients of information; they must be trained to collect information for themselves; and the first step in such training should be made by a system of home lessons. I wish I could report that home lessons were universally insisted upon in the schools which I visit, but such is far from being the case. They are very rare in girls' schools, and by no means general in boys' schools. They are in use, however, in all the *best* boys' schools; and wherever they are well arranged and carefully attended to, they produce excellent effects.

not sufficiently attended to.

Schoool libraries much wanted.

When a judicious system of home lessons has given a boy the habit of private and voluntary application, the next step is to introduce him to the school library, where such a thing exists. That libraries are not attached to every school is much to be regretted. I know nothing comparable to them as a means of commencing the process of self-education before children leave school. The poverty of schools can alone account for the little progress hitherto made in organising adequate lending libraries for the children, and I look forward to the removal of this defect in many cases by means of the capitation grant. Many schools, however, must long remain without these most desirable appendages unless some special encouragement be offered for their establishment, and I venture to recommend this object as well deserving the application of a portion of the public funds.

Night schools.

But though the process of self-education may be *commenced* before leaving school, even among those who leave before entering their teens, its continuance cannot be relied upon unless some external stimulus be applied. This is to be effected by means of night schools, mutual improvement societies,

lectures, reading-rooms, and public libraries. It does not fall within my province to report upon any of these except the first, and I regret to state that night schools are far too rare in my district. Your Lordships have put forth a Minute for the encouragement of these institutions, but the practical difficulty of complying with its terms has been found to be much greater than any one anticipated, and it has been very little acted upon within my experience. Having been directed by the Lord President to offer some suggestions upon this subject I may venture to point out the regulation, which requires every aided night school to be "in connexion with a day school in receipt of annual grants from the Parliamentary Fund for Education," as one which it would be desirable to abrogate. It is found in practice that the promoters of day schools are frequently unwilling to engage as a body in the support of night schools, although there are often individuals among them who are anxious to set on foot institutions of the latter class. Inconvenience must undoubtedly arise from multiplying the parties with whom the Education Department has to treat; but this inconvenience seems to be inseparable from any large extension of night schools, and any attempt to encourage their establishment must inevitably fail, if fettered by a restriction fatal to the admission of a large proportion of such as are likely to seek assistance. I propose, therefore, that night schools be recognized as independent institutions, and that inspection and aid be accorded to them, whenever they are conducted by competent paid teachers in wholesome and satisfactory premises. The aid allowed should be in the form of a capitation grant on behalf of each scholar that can be certified, and proved by reference to proper registers, to have attended a given number of hours during the season. The competency of the teacher should be ascertained partly by examination of his own attainments, partly by those of his pupils. The inspector's opinion must necessarily be decisive on the latter point; but the former should be tested by some uniform standard, and different degrees of ability should be recognized, as is done in the case of teachers of workhouse schools. The terms, *probation, competency, efficiency*, already in use for these latter schools, might be applied to the teachers of night schools without inconvenience; and their remuneration should be made to vary in proportion to the ability of which they had given proof. Thus a certificate of probation should secure for its professor a grant of (say) 10*s.* a head, one of competency 15*s.*, and one of efficiency 20*s.* for each scholar in the night school. In large schools a proportionate number of teachers should be insisted upon, and no single teacher should

Suggestions for their encouragement.

be allowed to claim for more than twenty scholars. As it is very important that as few restrictions as possible should be imposed on this class of schools, I venture further to suggest that grants be made equally to those in which fees are paid, and to those in which the instruction is free; and also, that no attempt whatever be made to prescribe the subjects of instruction, or to fix the age of the teachers below a certain limit. It is the chief aim of such institutions to induce young men and women voluntarily to continue the education which has been left imperfect at the day school; and to make the inducement strong enough, it is indispensable to teach them that which they themselves desire to learn, rather than that which others may think best for them. Such persons, after a time, not unfrequently become sensible of a want in the matter of education, and are ready to go where that want will be supplied. But if, in addition to that which they want, something else is thrust upon them, they are not unlikely to refuse both, rather than accept the boon which they have not sought. It is in this manner that the failure of many well-intended schemes can easily be accounted for; and if such failures cannot be altogether prevented, the course which I recommend will at least cause the responsibility for their occurrence to rest solely with the local promoters. Other points of detail would have to be considered before framing a minute upon these bases; but it would hardly be expedient to enter upon them here.

Infant schools.

There is a marked analogy between the functions of the night school and those of the infant school. Both are supplements to the ordinary juvenile school,—the one at the beginning, the other at the end; and both are rendered doubly important by the still growing tendency to remove children from the school to the field, the mine, or the factory at the earliest possible age. There are several excellent infant schools in my district, and I consider them the most satisfactory schools which I visit. But I am sorry to add that they are not nearly so numerous as they ought to be, and that their number has not increased materially of late. No scholastic establishment should be considered complete unless it provides a separate apartment for infants. In lieu of this, infants are constantly admitted into the same room with older children, there to be huddled together in some corner, and either left to the care of a monitor, little older than themselves, or altogether neglected. No wonder that, instead of being happy and orderly, as they always are in properly conducted infant schools, they become noisy and miserable, neither learning anything themselves nor allowing the rest of the scholars to pursue their studies in peace. When the schools

a mixed one, and the teachers consist of a master and one or two male apprentices, the fate of the infants is particularly to be deplored. I still meet with a few schools conducted in this manner; but, again, I rely upon the capitation grant as a means of speedily bringing about a better state of things.

Concluding remarks.

The conclusions which I draw from the past year's experience may be summed up as follows:—The establishment and maintenance of schools by means of aid from public funds continues to find favour with the friends of education, even to a larger extent than heretofore, and seems to be gradually taking its place as the general and recognized mode of providing instruction for children of the labouring class. The chief desideratum in the working of the system is, to produce a more lasting effect upon the minds and characters of the children submitted to it; and the greatest impediment to this result is presented by the early age at which children leave school. To meet this, infant schools should be everywhere established; the teaching of the juvenile schools should be rendered as effective and as practical as possible; and greater encouragement should be given to the establishment of night schools or evening classes, for the completion of that education which the early removal to labour necessarily leaves unfinished in the day school. These night schools should be allowed to adapt themselves freely to the wants of each particular neighbourhood, and should be rendered as attractive as possible. The process of self-education should at the same time be further encouraged by the establishment of lending libraries, not only in connexion with the day school and the evening school, but also in many cases independently, in every town or considerable village.

I venture to specify these as immediate wants, and such as the country cannot long forego. Whatever may be the machinery destined to provide instruction for the people, it must inevitably spread these elements of any useful system through the land; and so many districts remain as yet untouched by the process, so much remains to be done, that the Education Department must be prepared to extend its operations far beyond their present limits, and probably, ere long, to assume dimensions exceeding those of any existing public office.

I have the honor to be, &c.

JOSEPH BOWSTEAD.

To the Right Honorable
The Lords of the Committee of Council on Education.

Appendix B.

Industrial Schools.

The subjoined communication concerning one of the most remarkable and most successful industrial schools in England cannot fail to be interesting to all who are engaged in the promotion of this class of institutions. To justify its being called *remarkable* it is only necessary to instance two circumstances connected with it:—(1.) That whilst its whole cost last year exceeded 1,300*l.*, not more than 17*l.* of this had to be contributed by its promoters, so closely does it approach the self-supporting point; (2.) That it is managed exclusively by two ladies, daughters of Sir Stephen Lushington, D.C.L., to whose zeal its very existence is due, and to whose daily visitations, unceasing watchfulness, and kind but judicious control its success is entirely to be attributed.

That it *has succeeded* eminently no one will doubt, after taking the trouble to examine thoroughly its working upon the spot.

The aid afforded to it by the Committee of Council is small in comparison with the whole annual expenditure; for the public grants have been made in support of the teaching alone, not at all in aid of the maintenance of the boarders. Yet the managers will be the first to acknowledge the benefits derived from the assistance and sympathy of the Government. Had they been left, indeed, to struggle on without trained teachers, pupil-teachers, or the stimulus of annual inspection, it is very doubtful whether all their devotion would have sufficed to raise the institution much above the doubtful level at which it stood in 1853. Whereas in its present state it stands forth a bright example of the results to be expected from the enterprising benevolence of individuals, when they wisely associate their labours with such public measures as it has been found useful and practicable to establish for the promotion of the general good.

Ockham British and Industrial Schools.

These schools, situated about five miles from the Weybridge station on the South-western line, and near the main road from Guildford to Kingston, were built nearly twenty years ago, when the neighbouring parishes were for the most part ill supplied with, or totally without, schools. They were then very numerously attended, and the workshops and other industrial employments were very attractive; but in time the industrial enthusiasm declined, there were unfavourable changes of masters, and, by 1848, the school was little more than others, save in the circumstance of an hour or two being daily devoted to the garden. Schools had been erected in neighbouring parishes and left the Ockham schools merely such scholars as the parish (which has only about 600 inhabitants) itself supplied, and some half dozen boarders from a distance.

About this time Mr. Allen visited the schools once or twice, but they were not regularly placed under Government inspection till about 1851–2, when the late Mr. Fletcher visited them several times and suggested various improvements.

In 1853, Mr. Bowstead kindly visited them twice, two pupil-teachers were appointed, the elder girls were separated from the infant scholars and placed in the upper school under the master, and efforts were made to increase the number of boarders to meet the annual expenditure.

All payment of salaries and other donations being at this time withdrawn, and the sole source of income to the school being confined to the proceeds of two school houses and about five acres of ground, there was no alternative

but making the whole establishment self-supporting, which the annual accounts, marked No. 1., for 1855 and 1856, will prove to have been very successfully done.

The buildings and grounds are entirely free of rent and tax, and have been lately, by the liberality of the Earl of Lovelace, extended to three school-houses, each containing from six to eight rooms, and seven acres of ground. Of the mode of cultivation and general management the following extract, marked No. 2., will give some idea.

The present head-master, Mr. Jones, came in January 1854. He was trained at Cheltenham, and took a second-class certificate. There are also three resident male teachers, besides the pupil-teachers; one being an assistant provided by the Government Minute of July 1852, and one only a French teacher.

The infants' schoolmistress, Miss Ince, trained at the Borough Road, superintends the upper school girls when out of the school-room, and undertakes the infant school with the assistance of a pupil-teacher and monitor. During the summer months the average attendance is in the infant school from 40 to 50, and in the upper school from 90 to 100; from 60 to 70 of these being day scholars.

The lowest rate of payment for day scholars is 1*d.* weekly, a few only paying at a higher rate. Weekly boarders pay 3*s.* 6*d.* per week, entire boarders 16*l.* per annum if boys, 14*l.* if girls. This, with two guineas on entrance, includes every expense but clothing and medical attendance. No child under seven is received as boarder. *See* Extracts No. 3. and No. 4.

The day scholars are principally children of labourers, some few of farmers or tradesmen; the boarders are, for the most part, children of tradesmen in London and its neighbourhood, but some are the children of servants, soldiers, and (in rare cases) of those whose means alone debar them from occupying a much higher position in society.

The instruction includes, besides the ordinary instruction, the elements of algebra, chemistry, vocal music, and drawing for the upper classes. From five to six hours daily (Wednesdays and Saturdays excepted) are given to intellectual training; from two to three hours to industrial work; and the remainder to recreation, meals, &c.

The industrial work of the girls is carried on under a matron, assisted by a needlewoman. Two laundry-maids and two kitchen and housemaids from among the girls take it in turns to assist in each department. They are taught to wash and iron, scour and dust, cook and bake, with some knowledge of doing work. They also take a large share of the weekly mending, sorting of clothes, &c. Three girls from the village are boarded at the school to give them opportunities of improvement in these branches of household work.

The training of teachers and servants forms one of the principal objects of the institution. Seven of those brought up in the school are now engaged as pupil-teachers, a large number have entered domestic service, gone out as clerks, &c. Of the greater number of these very satisfactory testimonials have been received. Admission to the school is to be obtained by application to the managers, who are desirous of affording every facility to those friends of education whom it may interest, and who may thereby be encouraged to make their own schools, as it is most desirable that every school should be, self-supporting.

EXTRACT No. 2.

When the present master took charge of the schools in January 1854, the garden ground, together with school premises, amounted to about five acres; of this, half an acre was in crop with clover and autumn-sown rye for early feeding; whilst one cow and four pigs were living on the last year's swedes and mangels, the latter of which had been very fine. The land was, on the whole, exceedingly impoverished, and in many places very foul with weeds; and since there was no manure to be obtained in the neighbourhood, many of the crops had not much opportunity of making a fair return. The ground was cropped in due season with vetches, beans, barley, potatoes, mangel wurtzel, swedes, turnips, and cabbages, besides about half an acre laid out as a kitchen-garden, and a still larger quantity divided as allotments for the boys. The garden was devoted to the cultivation of all ordinary vegetables, but was not very successful; the carrots and onions failed, while the peas were much injured by the mice and birds. The crops, however, were sufficiently good to allow of the purchase of a second cow in August, while the pigs had been increased to about fifteen, and a few poultry had been added to the stock. The barley, mangel, and swede crops were very good; potatoes, parsnips, and cabbages were very fair. At the year's end the accounts showed a favourable balance of about 35*l.*, or at the rate of 7*l.* per acre. The years 1855 and 1856 were both much more successful, the increase of stock having enriched the land by a more plentiful supply of manure. In each of these years an additional acre of land was taken, and various improvements effected; among which may be mentioned the draining of about two acres of the garden, and the building of a large manure-tank in addition to the old one. The increased productiveness of the land during

* The sums here given as the amount of the Government grants does not include the augmentations of the teachers' salaries or the stipends of the apprentices, but only those grants which fall into the general funds of the school.

those years is shown by the fact, that at Christmas 1855, five cows, ten pigs, and about twenty head of poultry, were being maintained, besides supplying a household of upwards of a hundred persons with vegetables. This was an increase of three cows, and about fifty consumers of vegetables, since 1854. It must, however, be stated, that these cows have not been wholly kept upon the produce of the garden, since they are allowed to graze in the adjoining park, and are often only kept at home during the night, when they are fed with vetches, clover, and rye-grass. The crops of mangels, swedes, potatoes, turnips, barley, rye-grass, cabbages, and vetches, were last year all a very good average, and were of sound quality.

The capabilities of the garden have been much extended this year by the addition of a considerable quantity of glass for forcing, in order to raise early vegetables, &c., for market. This has been done in connexion with a plan for maintaining boys at school, clothing and educating them in return for their labour during a portion of each day. The feasibility of the plan has yet to be proved. Five boys are now at work on about three acres of land, the produce of which, laid out as a market-garden, is to be sold. A portion of the plan embraces the keeping of an additional cow, and three or four breeding sows, so that considerable remuneration is anticipated from that source. The class of boys thus engaged is not very far removed from that often called "dangerous," so that if the plan does really succeed, it will form a connecting link between the union and reformatory. At present the change seems to have been very beneficial to them, a marked difference being perceptible in their whole behaviour. They work under a steady man, and have hitherto given satisfaction by their industry and care of their own gardens. It may be added, that the higher kind of cultivation which has recently been introduced, is likely to have a particularly good effect among all the boys, as they seem to take great interest in the plants, &c., which are growing in the various frames, and by imitating, are led to take more pains with their own gardens.

These gardens of their own form one of the most interesting features of the industrial element, and are productive of very much good in many ways. Their sizes vary from about three rods to one, the elder boys having about ninety yards. The children have to pay a monthly rent for these, being $2\frac{1}{2}d.$ for the largest, $1\frac{1}{2}d.$ for the second size, and $\frac{3}{4}d.$ (that is, $1d.$ one month and $\frac{1}{2}d.$ next) for the smaller divisions. The seeds are sold to them at cost price, and the whole is under a certain set of garden rules, by which (among various things) it is ordered, that not more than two or three main crops may be grown, that no crop is to be taken up without permission, and that untidy gardens will be fined. The profit to the owners, in some cases, has amounted to $6s.$ or $7s.$ in the course of the year. There are upwards of fifty of these gardens, together with about thirty-five small flower gardens held by the girls, extending down one side of a long walk. These gardens are not cultivated during school hours, but are considered as places of recreation. The hour and a quarter set apart for industrial work on the daily routine being spent on the school grounds under the masters and pupil-teachers. A portion attend to cows, pigs, and poultry; another to garden work; while a third is chiefly engaged in the more simple occupation of digging. By this means the naturally barren soil has been much improved by deepening the staple and breaking up the subsoil, by a plentiful addition of farmyard manure, liquid from tank, rich composts formed of soil collected from sides of road, &c., well digested with liquid manure, and also by the help of top-dressing of guano and super-phosphate.

The carpenter's shop, in unfavourable weather, finds work for several handy lads in repairing tools, &c., and in making many articles for common use. The average number of boys employed on the school grounds daily will number upwards of forty, though sometimes there are many more than this number, and at others considerably less. The work is generally very well done, and is looked upon by the boys more as a recreation than a

labour, for it has been often found that they preferred working a whole afternoon to going into school.

An annual "show" is held in connexion with the school gardens, when prizes are offered to the villagers and boys for the best vegetables and flowers. It has hitherto been remarkably well attended, and supported with much interest by all, and is this year likely to be as attractive to the parties concerned as on former occasions. The prizes vary from 1*s.* to 2*s.* 6*d.*, and number about seventy altogether, thus giving to most of the children an opportunity of obtaining one at least. This show is particularly useful as a stimulus to the boys' exertions, which, without something of the kind, would be likely to flag after the excitement of the spring had passed over.

Extract No. 3.

The school is guided by the accompanying routine, (*see* Extract No. 4,) a school committee being responsible for the proper ringing of the bell at all requisite times. In school hours the children are divided into three sections, and each section again subdivided into two divisions, which are again subdivided, as occasion may require, into drafts. The first of these sections is under the head master and a pupil-teacher, and receives its instruction in the dining-room, the tables being so contrived as to be capable of being used as desks. The second section is under the charge of a second and third assistant master, while the third section is under two pupil-teachers. These sections are seldom grouped together, being chiefly retained under the care of the respective teachers.

The religious teaching of the school is based chiefly upon the principle laid down by the British and Foreign School Society, and is the subject of constant and careful attention. Bible lessons are given daily, and the boarders attend the neighbouring church. The clergyman of the parish is a constant visitor at the institution.

General Report, *for the Year* 1856, *by Her Majesty's Inspector of Schools*, J. S. Laurie, Esq., *on the* British Schools, *and the* Wesleyan *and other* Denominational Schools, *inspected by him in the* North-Eastern Division *of* England.

My Lords, January 1857.

The number of my inspections of departments under separate teachers, during the past year, amounts to 230. Five of these having been second visits, the actual number of distinct departments examined is 225; of institutions, 168.

The best proof of the increasing popularity of your Lordships' measures is to be found in the fact that, within the past year, 37 additional schools (British, 22; Wesleyan, 15) have come under Government inspection in this district alone. Through your Lordships' solicited intervention, some of these schools have been rescued from hopeless decay; some have been invigorated by encouragement; while the managers of others have been enabled to erect entirely new premises.*

I have pleasure in recording that the great majority of school managers are not relaxing their efforts; and I could cite many proofs of the most cordial sympathy and co-operation established between your Lordships and members of the various leading bodies of dissenters, and more especially the Friends and the Wesleyans.† In almost every case, brick floors have been removed; and in three-fourths of the schools the construction of groups of desks, and the other internal arrangements applicable to the pupil-teacher system, have been cheerfully effected. Further, it would not be difficult to prove that, in all parts of the realm, your Lordships' grants have stimulated voluntary efforts to such an extent that the aggregate amount of local subscriptions for educational purposes exceeds incomparably that of earlier years.

There still remains, however, a very great deal to be done. Misconceptions have to be cleared away; abuses to be corrected; evils to be abolished; and new and growing exigencies to be met.

---

* The efforts already made and now being made in the rural districts of Lincolnshire cannot be too highly applauded or too closely imitated.

† York:—Managers both of the British and the Wesleyan Schools. Norwich:—Mrs. Bolingbroke and Miss Martineau. Darlington:—Mr. Joseph Pease, Bridge Street, Girls'. The Rev. Messrs. Talbot, Exley, Reynoldson, Stewart, and Wycherley, in their respective districts,—N. Lincoln, Keighley, Wisbech, Northumberland, and Durham. Miss Fry, of Chatteris, &c.

I have too often had occasion to disabuse the minds of school managers of the impression that, in accepting Government aid, they virtually surrendered their authority, or even disencumbered themselves of their former pecuniary responsibility. Independent local management forms so distinctly the basis of your Lordships' operations that such an unreasonable idea would soon bring ruin upon a school,—had, indeed, in more than one instance, well nigh done so, but for the almost single-handed benevolence of an isolated trustee.

I take the liberty of here referring to a minor point of convenience, on which managers, generally, are not definitively agreed. They appear not to be fully aware that the rules and stipulations of the Committee of Council on Education while in force are absolute and indispensable. If this simple fact were distinctly understood, the onerous correspondence of Her Majesty's Inspectors would be abridged by more than one-half, and the Department would be spared much tedious and fruitless labour.

In my Report of last year, I called attention to the increasing demand for the labour of partially educated juveniles,—a demand which naturally adds eagerness to the desire of the industrial classes to secure for their offspring some kind of marketable instruction. This and other causes (among which the liberal interpretation of the Capitation Minute,* when properly understood and appreciated, will not be the least active) have already swelled the number of pupils, in a vast number of schools, far beyond what the existing means of accommodation admit of. There is, especially, ample room for everything that the most untiring energy can accomplish, in devising some practical method of carrying on the treatment and training of the crowds of *infants* who now, to such an intolerable degree, confuse the operations of the teacher and retard the progress of the taught.

In *rural schools*, unless the population is very scanty, a clever teacher can easily, at certain periods of the year, raise his numbers greatly beyond the maximum to which they should be limited by his available space; and this he can do, and does mainly, by the prodigal admission of infants. It is true that agricultural districts and small villages cannot always be expected to support separate infant schools; but, at least, separate class-rooms are indispensable, *i. e.*, class-rooms of *adequate capacity*, and not, as I have so often found them, constructed on dimensions so limited as to threat[en] suffocation. The general plan of the infant class-room s[hould] be based on that of the infant school; and I have been

* Vide Minutes of 1855–6, page 47.

tomed to predict that, in a room so designed, a good pupil-teacher (and a female, if possible, should be selected), with the aid of six efficient monitors, in alternating staffs of three, each withdrawn half an hour daily *from the upper or juvenile school*, would speedily constitute this embryo division a prominent and valuable element in a mixed rural school.

But the average annual increase of attendance in the *schools of the more populous manufacturing villages and provincial towns* is still more striking, whilst the accommodation is still more inadequate. Here, even when the labour market is glutted by redundant supply, or somewhat depressed by slackness of trade, the attendance does not decline. At such times the more provident parent, aware of the material value of school instruction, and well knowing that the weekly fee is an insignificant item in his expenditure, prefers to renew or prolong the term of his children's schooling, at least till the avenues of employment be again fairly open. This habit of forethought and calculation, now by no means rare, promises to become more general; and pretty securely shields the schools of the above-mentioned districts from any chance of falling off in point of numbers. The remark, therefore, already made with regard to rural schools, applies here with still greater force. Here an able teacher may with the utmost facility fill his school up to the prescribed limits with juveniles ranging from five to eleven years; and, in addition, he may enlarge his infant sections so as to form a good numerical basis for a new and separate infant school. Can, then, the establishment of such a department in these cases be too soon or too resolutely set about?

For the sake of clearness, I shall here classify the different institutions under my inspection, as follow:—

1.	Institutions consisting of one *pure* school:			
			Infants - -	6
2.	„	„	one *Mixed* School:	
			(*a*) Boys and (male) infants -	21
			(*b*) Girls and (female) „ -	12
			(*c*) Boys, girls, and infants -	74
3.	„	„	*separate* departments:	
			(*a*) Boys', Girls', Infants' -	6
			(*b*) Boys, Girls' - -	22
			(*c*) Boys, Infants' - -	24
			(*d*) Girls, Infants' - -	3

From this it appears that, in all, 129* institutions have no infants' school connected with them. Thirty-eight of these, however, are purely rural, and have already been disposed of. There remain, therefore, 91 to which the addition of

* *i.e.* Nos. 2 *a*, *b*, and *c*, and 3, *b*.

infants' schools has been stated to be practicable and advisable, on the mere ground of the great increase in attendance. But it need hardly be added that there are many other and weighty grounds for that addition. For how else, indeed, can the teacher exercise a unity of purpose in his operations,—a principle so important for the proper educational control of large numbers, and so indispensable to the harmonious working of all the parts of a school? If, even with a clear and harmonious plan, extraordinary exertions are needed to produce any satisfactory results, what but signal failure can be the fruit of the most laborious and persevering efforts, if these efforts are embarrassed by the want of the very possibility of a system? But system, in the operations of a common school, is simply inconceivable without a *reasonable* equality in age and acquirement; and the less distracting the inequality, the greater is the chance of a good system. For example, it is just to be expected that the 38 pure and distinct infant schools* in my district should best answer their specific ends. And this they do mainly because the units composing them are homogeneous, and because the modes of instruction, treatment, and discipline are cast in one mould. All appeals, being adapted to the natures and capacities of infants, are intelligible to all; the whole school is a simple mechanism, subserving one definite purpose. But, if we turn to the other schools, the contrast in this respect is painful, for we find here a crowd of infants not only bewildering, but themselves utterly bewildered by the incongruity of their stage of progress with that of the juveniles. Moreover, the more alive to their condition the teacher is, the more prone is he to fall into the sad extreme of overworking their tender faculties, simply that they may be transferred as soon as possible to what he styles the "more manageable" classes. Such a result is inevitable, even when the teacher has strained his resources to the utmost. Another and an important point should not be forgotten. The teacher's own studies have generally had little or no reference to the evolution of the infant mind. And I would ask whether it is not obvious that the person best qualified for the task is the infant mistress, whom natural instincts, a more delicate organization, and specific training, enable at once to establish a sympathetic understanding with her little pupils.

Two wants, then, are clearly established,—the want of *adequate class rooms* in nearly 38 rural schools, and the want of *separate infant schools*, with infant mistresses, in connexion with 91 other institutions; in supplying which the spirit of voluntary effort will have an opportunity of showing

* *i.e.* Nos. 1 and 3, *a*, *c*, and *d*.

its enterprise. I write not despairingly, for, without doubt, a growing disposition to recognise the urgent need of some change in the treatment of infants prevails throughout this district,—a disposition which might perhaps be encouraged if your Lordships would tender a greater than the present proportion of aid towards every enlargement which should be an improvement. This liberality might be justified on the ground that the necessity of enlargement is not only an evidence of past, but a good guarantee of future, progress.

I am sorry to have to add, with reference to the remaining institutions* to which separate infant departments are attached, that I cannot but deprecate the loose manner in which the specific and professed purposes of the upper or juvenile departments are adhered to. Not one of the latter is a pure department of boys or girls. Into all, infants are too indiscriminately admitted, at the pleasure of parents or from other incidental causes. With the most effective remedy at hand, their constitution is often virtually as dual as that of the 91 institutions above referred to. I trust that school managers will soon apprehend this incongruity and re-consider the constitution of their schools. Where the advantage of an infant department exists, it would surely be advisable to prescribe a certain standard of attainments as the passport into the juvenile department; *e. g.*, ability to read very easy narratives and to spell and write simple words.

In my last report I mentioned some of those general social obstructions to the elevation of the quality of instruction in common schools, which are external in their nature; and I gave it as my opinion that they would be best removed by an indirectly compulsory enactment applied to such branches of organized labour as are unaffected by the Factory Act. The second class of obstructions is local and internal; the remedies resting, on the one hand, with the enterprise and good sense of school managers, and with the professional discipline of the schoolmaster on the other. On the last point, I now beg leave to make a few observations; and, for the sake of clearness, I shall avail myself of the following simple characterization of the schools which have been submitted to my inspection:—

1. Good	5 schools.
2. Fair	46 ,,
3. Moderate	174 ,,

1. Two of the five schools cited as "good" in my previous report have maintained their character. The remaining three have, from various causes, somewhat deteriorated and fallen below the first grade, while three others (two from class Fair,

* Videlicet, 3, *a*, *c*, and *d*.

and one a newly established school,) have risen into it. The five *now* are :—

Boys' British School, Hope Street, York,	Teacher,	Mr. Osborne.
„ „ „ Boro' West, Bradford,	„	Mr. Dick.
(Mixed) Wesleyan School, Goxhill, Lincoln,	„	Mr. Hopwood.
Boys' British School, Wisbech,	„	Mr. Miller.
„ Wesleyan „ Lincoln,	„	Mr. Holton.

To give details of the many distinguishing features of these schools would be superfluous. Suffice it to say that their teachers, equipped with the requisite appliances of instruction, and aided by every auxiliary artifice which ingenuity can suggest, seek earnestly to apply those principles of pedagogic method which they have learned thoroughly to appreciate. They adjust their method to the special difficulties of each subject of instruction ; and they so coherently evolve principles with facts that the comprehension of the former becomes the only valid ground of progress with the latter. Possibly because this—the soul of instruction—has not, until lately,* been prominently laid down as an established indispensable to success in the competitive examinations, the method of teaching is, in the large majority of instances, but feebly understood ; and that practised, even by those five most successful teachers, is still far from being perfect ; but the general aspect of their schools justifies the most sanguine hopes. Mr. Hopwood's grasp of the idea, although his experience has been short, appears to be most secure ; and this teacher has, besides, by adroitly adapting himself to circumstances, so well exemplified how many external drawbacks skill and determination may defy, that I shall here quote a few details of his case. When I inspected the new Wesleyan day school at Goxhill, a rural village in Lincolnshire, Mr. Hopwood had only been established in it for about five months. Education, in the proper sense of the term, had been entirely neglected in the village, and the prejudices of parents had at first resisted almost every attempt at improvement. These prejudices have been, in great part, removed, quietly and with much tact. A tabulated plan of instruction is regularly followed in the school. To the *grammar* lessons (which are much liked, simply because they are made intelligible) considerable prominence is given. *Analysis precedes Parsing.* The comprehension of abstract ideas, *e. g.*, of the tenses, &c., is often aided by pictorial representations. *Geography* is taught by maps drawn on a black-board, and gradually filled up, as the information

* Circular Letter from Education Department, to Principals of Training Schools, dated 14 August 1856.

extends. *Reading* is taught according to a system of sounds; and the simultaneous method is much modified. *History* is treated chiefly in *oral* lessons. The children reproduce the lessons, or what they remember of them, in exercises written at home. "We vary this course," Mr. Hopwood writes, "by occasionally reading parts of Cassell's Illustrated English History, which the boys and girls of the highest section take in penny numbers. By this means they read a great deal more than they would be likely to read if they purchased a volume. They are greatly entertained with their periodical, which they read to their parents at home, while they amuse their little brothers and sisters with the pictures." *Writing* is taught according to Mülhauser's method; those details being omitted which do not aid the attainment of regularity of form, distance, and inclination. The following is the plan of *home exercises*:—

——→	1st Section.	2nd Section.	3rd Section.
Monday - -	Invoice - -	Arithmetic -	Arithmetic.
Tuesday - -	Analysis - -	Transcribing -	Writing.
Wednesday -	Abstract of History Lesson.	Analysis - -	Figures.
Thursday -	Map - - -	Map - - -	Tables.
Friday - -	Transcribing and parsing.	Ditto - -	Writing.

"Even those parents who at first objected to this way of employing their children at home now take an interest in the exercises and often join in them." "At first *late coming* threatened to become a great evil with us. The children came, according to their old custom, at 10 and 10½ o'clock in the morning. But, by causing each late comer to enter his name, with the number of minutes late, in a book kept for the purpose, by sending the parents a weekly return of their children's loss of time through lateness, by detaining the late ones after time or during play, and by greeting them as they entered the schoolroom with a song on the evils of late coming, we have, I may say, quite destroyed the evil, and our late attendance book contains no entry for several weeks past." By such simple artifices, as well as by the skill with which he accustoms the children to do every part of their work well and thoroughly, Mr. H. has acquired and maintains excellent discipline; and he has the merit of having, in an incredibly short space of time and under disadvantageous circumstances, infused into an exceedingly rough material a smartness and a spirit of intelligence which are truly refreshing.

2. Of the schools characterized as "fair,"* I can give your Lordships an account which is, on the whole, encouraging. This class of schools is progressing towards a more coherent and better ordered system of general discipline; and their teachers are becoming more and more accustomed to test the value of their labour by the improved temper and tone of their pupils' minds, and to estimate an increase of mental force and elasticity higher than any accumulation of barren facts. The number of this grade has been augmented beyond my expectations, and from the prevalence throughout this district of a growing spirit of healthy emulation, I am disposed to anticipate annual accessions of proportionate significance.

3. Although the number (132) of "moderate" schools alluded to last year has been diminished by 19, their ranks—recruited and enlarged by 51 others—present a combined total of 174; an amount so striking that I feel constrained briefly to point out the chief causes of their failure. Allowing full weight to all that can be urged by way of palliation, with reference to external drawbacks—such as irregular attendance and premature removal from school,—the schools in question afford too meagre results. An encouraging proportion, indeed, of their teachers have realized the fact that the new exigencies which time has brought us call for the development of fresh resources. But, in groping after a cure for the unprofitableness of their toil, they have stumbled upon an illusive and misleading corrective. It is much to be feared that the addition of other branches (supposed to be more familiar and attractive) to the ordinary routine of public instruction will prove but the means of an ephemeral display. It is a fact well worth consideration that, such are the actual difficulties of school-keeping, the most successful teacher is rather disposed to retrench and abridge, or entirely to avoid all the less essential subjects. He retains only what is indispensable, and devotes his energies to make that the vehicle of sound training. His great aim is not to furnish his pupils with an extensive range of general information, and not, certainly, to train them with a view to their future callings; for, in our present stage of progress, he knows that any such technical instruction is utterly impracticable. He therefore abandons the idea of *special accomplishment*, and labours to realize that of *general discipline*. He imparts information sparingly, but elicits thought profusely. He looks upon a store of facts as a

* The more prominent of this grade are:—Wesleyan and British Schools, Hull; W. S. (Darley Street), Leeds; Old Dalby B. S.; British Schools, Thirsk and Yarmouth. To these I may add the more prominent of the Cornish schools, which I had the pleasure of inspecting for my colleague, Mr. Bowstead:—Truro B. S. Penzance W. S., Falmouth B. S., and Penryn W. S.

less valuable possession than that spirit of awakened observation, and those habits of exact thinking, to which intelligent co-operation in the work of the school will naturally give birth in the minds of his pupils. And this co-operation it is his chief study and constant effort to secure. Nor let it be supposed that in following out this course the teacher is influenced by a depreciative estimate of the importance of mere information. If it were his aim to impart useful information and nothing more, this would still be the best course for him to pursue. Pupils trained in this way, instead of leaving school possessed of a multitude of loose and incoherent facts, *which a year or two's absence is, in most cases, sufficient to scatter to the winds*, would carry away with them a body of information, limited indeed in extent, but securely grasped, and a capacity, as well as a desire, of adding indefinitely to their store. It is true that the method which I advocate demands the conscientious cultivation and energetic exercise of powers such as the mere taskmaster does not dream of. Exactness of thought, vividness in the statement of facts, clearness in the elucidation of principles, and discriminating insight into character; these are the indispensable conditions of success. Possessed of these, however, the teacher will not only elicit the hearty co-operation of his pupils, and insure the healthy development of their faculties; he will not only redeem his own daily labours from the irksomeness of mechanical taskwork to the dignity of an ennobling profession; but he will gain that ascendancy over the minds of those entrusted to his care which alone gives weight to moral precept, and will thus contribute no less to the social amelioration than to the intellectual advancement of the industrial masses of the community. In this good work I fear that such education as that communicated in the 174 schools above referred to has but an indifferent share. The statistical fact* that nearly three-fourths of the juveniles who find their way to some of our penitentiaries, through the various avenues of crime, have received "instruction"

---

* Kindly furnished to me by the Chaplains of Pentonville, Parkhurst, Millbank, and Preston penitentiaries. Some of the prison authorities not having directed their attention to the subject of my inquiries with the view of tabulating the results, I have been enabled to make but a rough estimate of the whole. In Pentonville four-fifths of 5000 had received instruction for an average period of four years. Millbank will, no doubt, approach this, while three-fourths of the Parkhurst delinquents, 94 in number, averaged only 22 months, and, again, about the same proportion (in 1000) of the Preston prisoners somewhat exceeded this term of attendance at school,—attended, of course, with the usual irregularity (*vide* Mr. Clay's Report). The amount however, as affecting the *variety* of the delinquents, ought to be taken into account, while comparing the *respective* averages of the periods of schooling; and the exclusive or specific object of an institution, as well as the habits of the population among which the various classes of criminals have been nursed, may account for much relative discrepancy.

in inspected and other schools for periods averaging three years, ought to create in the bosom of the mere mechanical teacher no small hesitation as to the accuracy of his method. Be it granted that the evils of irregular attendance are embarrassing, that short and piecemeal periods of schooling are disheartening in the extreme—nay, more, that all endeavour to counteract, in one fleeting term, the temptations which beset the too-easily earned or the hard-earned livelihood, may prove futile, or be deemed utterly hopeless,—the sagacious schoolmaster will still continue to treat his pupils otherwise than as mere machines. No doubt, even the most barren technical instruction may now and then, under favourable circumstances, be the means of raising aspiring youths out of the reach of ordinary temptation; but it seems clear that, if the school is to raise a safe barrier against improvidence and criminal excess, it can do so only by the tact and judgment with which instruction is imparted so as, at one and the same time, indirectly and unconsciously to rouse the moral feelings.

I have already indicated that, for all the practical purposes of the common school, the purely elementary branches of instruction are fully adequate to the attainment of the ends which a wise educator will propose to himself; and that, if these 174 teachers would successfully grapple with existing difficulties, their safer course meanwhile is, to develop their *own* resources within this limited sphere, rather than vaguely to cast about for foreign aid. But, in attempting to follow this course, it is of importance at the outset that they should clear away all the internal impediments which at present interfere with their progress. To such internal impediments (among which I cannot help regarding as a leading one the excessive adherence, especially in Wesleyan schools, to what is styled the "simultaneous method") I have not failed to draw the attention of teachers as far as lay in my power. I confess, however, that I have often been less willing to recommend formal improvements than to encourage an experimental scrutiny of the real organic working of what I was disposed to consider as systematic errors; partly because an intelligent recognition of disease is the first step towards a satisfactory cure,—partly because of the acknowledged and manifold difficulties of the subject. I shall deem myself fortunate if the extended observation of another year shall enable me to contribute my share to a criticism of some of the impediments referred to, and to an illustration of the best means of removing them.

I have the honor to be, &c.

J. S. LAURIE.

To the Right Honorable
The Lords of the Committee of Council on Education.

† Exclusive of Government grants.

GENERAL REPORT, *for the Year* 1856, *by Her Majesty's Inspector of Schools,* T. W. M. MARSHALL, Esq., *on the* ROMAN CATHOLIC SCHOOLS *inspected by him in the* SOUTHERN DIVISION *of* GREAT BRITAIN.

MY LORDS, January 1857.

Schools in tabulated reports.

I REGRET that, owing to the gradual increase in the number of schools liable to inspection, and the impossibility of visiting them all within the limits of the official year, a certain number of those in my district, including some of the most efficient, will not find a place in my tabulated reports. These are schools which I was able to examine in the month of August in 1855, but, could not find time to visit before September in 1856; and, as the official year terminates on the 31st of August, they are unavoidably excluded from the account which I have now to offer of the past year's work. The schools referred to are the following:—Nottingham, St. Mary's; Nottingham, St. Barnabas; Loughborough; Alton, St. John's; Spinkhill; Wakefield; Skipton, St. Stephen's; Broughton; Worksop, St. Mary's; Bradford, St. Mary's; do., night school; Bradford, St. Patrick's; Spitalfields, Princes Street. In these thirteen schools, containing twenty departments, and attended by 1,447 children, there are thirteen certificated and fourteen pupil teachers; and I wish to add, with respect to four of the number, viz., Nottingham (2), Alton and Broughton, that they continue to be conducted with the same remarkable skill, patience, and judgment which I have noticed in former years.

Necessity of additional inspection.

Considering the present state of my district, the steady increase in the number of applications for annual grants, the equally uniform growth of new institutions, and the demands which arise out of these circumstances upon the time of the Inspector, I cannot venture to hope for any diminution of the inconvenience which has been gradually, and for some time past, becoming more and more sensible. During the last year I have reluctantly declined private invitations to visit nearly fifty schools, a large proportion of which would probably, after such preliminary inspection, be placed in connexion with the Committee of Council, and enter upon a new and more active life. Without entering into minute and unnecessary details, it may suffice to say, that I could transfer to other hands four months work in my district, and still retain full employment for myself for the whole year. I have no precise knowledge of the state of the district confided to

my colleague, Mr. Stokes; but as it is considerably larger than mine, and the number of pupil-teachers in the northern is to those in the southern district in the proportion of 400 to 250, or 2 to 1·25, it may be presumed that he is at least as much embarrassed as myself in meeting the demands made upon him. Indeed he has informed me, in reply to my inquiries on this subject, that he would gladly resign the whole of Scotland and some of the north-eastern counties of England. To these I could add, much to my own relief, Yorkshire, supplying at least two months work, and all the eastern counties north of the Thames, besides the inspection of and annual examinations at the Hammersmith Training School. On the whole, I conceive that the time has arrived for the appointment of a third Inspector, if the large number of elementary Roman Catholic schools, not hitherto inspected, but of which the managers desire to share in the benefits administered by the Committee of Council on Education, are not to be permanently excluded from advantages which are now not only more generally understood and appreciated than at an earlier period, but also, one may venture to say, have been proved to be an almost indispensable condition of complete success.

Applications for aid, why increasing.

In recording the gradual increase of annual grant cases in my district, and the general disposition which I observe in the managers of non-inspected schools to claim, in their turn, the aids which others have already accepted, it may be expedient to enumerate, once for all, the principal causes which appear to have contributed to these satisfactory results. Two practical conclusions will be found to flow from them, both of which may be suitably noticed in this place. On the one hand, they include a just and not unimportant testimony to the wisdom, impartiality, and technical merit of the measures adopted by the Committee of Council for stimulating and improving public education; on the other, they attest both the careful scrutiny with which the promoters of a particular class of schools have examined all the principles of their administration, and the frankness with which, after deliberate consideration, they have acknowledged their soundness, and recommended by word and example their acceptance to others. Such a testimony is surely equally honourable to those who receive and to those who offer it.

Improved state of inspected schools.

The first and most obvious inducement to regard with approval the system administered by the Committee of Council on Education, has been the experience of its practical and uniform results. If a certain number of school managers who have not hitherto adopted it, and have no personal knowledge of its actual operation, retain the misgivings which at one time

were common to the various educational bodies, and for which in the case of Roman Catholics there was a special reason, arising out of their past history and position in this country, all such uneasy feelings of hesitation and suspicion appear to have been abandoned by those who have tried the system experimentally. It is precisely the managers of the largest, most important, and best conducted schools who have most emphatically protested, both by public and private acts, against the chimerical apprehensions which once prevailed; and they point to their own experience and observation as a sufficient motive of confidence. But they use also another and equally cogent argument. The improved condition of inspected schools, their growing efficiency, and the manifest influence of the sagacious and prudent measures of the Committee of Council upon them, have not escaped the attention of these careful observers. Reserving only certain exceptional cases, such as the unwise and perverse retention of an incompetent teacher, extraordinary irregularity of attendance, hopeless poverty of parents, or other special and local obstacles, it cannot be denied that improvement follows inevitably upon inspection; and this improvement is visible not only in the particular school receiving public aid, but has a tendency to diffuse itself in a gradually increasing circle. One good school in a town creates others. Many persons do not know, till they actually see it in operation, what a really efficient elementary school is. When they do see it they are seized with the desire of imitation. And thus, as I have said, one good school begets another. If I were to notice all the examples of this fact which have come under my own observation, I should have to write the history of a large proportion of the schools which I have inspected during the last eight years; I will, however, mention a few cases.

Sheffield.—On my first visit to this town, in 1851, I found not one really efficient Roman Catholic school, and only one competent teacher. As lateas 1855 there were only 552 children present in all the inspected schools; but one of these had, meanwhile, become a model to the others. In 1856 there were 1,000 children, the average attendance having doubled in less than twelve months; new buildings, on a noble scale, had been erected; and the existing schools were already taught by five certificated, one assistant, and eighteen pupil teachers. In addition to the considerable amount of payments to which this large staff had become entitled, more than 70*l.* was received last year on account of "capitation grant." It is true that much of the remarkable progress in the Sheffield schools, a progress which I am sure will be sustained, is due

to the recent employment in all the female schools of a peculiar class of teachers, the sisters of Notre Dame, members of a community whose educational labours extend throughout France and Belgium, and I believe even to America, and many of whom are unsurpassed as elementary teachers. But the question is, whether the desire to secure such important services, and the disposition to afford them the widest range, by erecting new and costly buildings, and by other measures of active co-operation, has not grown up simultaneously with the new system? It certainly coincides with it in date; and at all events these devoted and accomplished ladies, who have given their full assent to the measures of the Committee of Council, are perfectly willing to bear testimony to the advantages which they have derived from their operation.

Birmingham.—Although the full measure of benefit resulting from the system of inspection has not hitherto been attained in this town, and its advantages have been paralysed by irregular attendance and the fatal inducements to juvenile and premature labour, yet I may fairly refer to it as an illustration of the important aids administered by the Committee of Council. Already it offers for official inspection seven schools, containing seventeen departments, attended at the last inspection by nearly 1,400 children, and taught by twelve certificated, one assistant, and twenty pupil teachers. At my next visit I shall have to inspect two additional schools.

Bristol affords another example of the same progress, due to the same causes. At my first visit, one very indifferent school, attended by about fifty children, had applied for annual grants. Last year I inspected five schools, containing eight departments, in which I found nearly 500 children, taught by four certificated and ten pupil teachers.

Nottingham is not the less remarkable illustration of the same benefits, because, for special reasons, it was always more independent of them than almost any other place. Yet, excellent as the schools in that town have now become, thanks to the labours of an admirable body of teachers and the cordial and intelligent co-operation of the clergy, I remember them when they were far less efficient, especially in their intellectual aspect; and the teachers assure me that the religious has improved *pari passu* with the secular instruction, and that they trace an intimate connexion between the character of the two. In the two inspected schools of that town, containing six departments, and attended by 420 children, there are now six certificated and ten pupil-teachers.

Wolverhampton, a very similar case, with 550 children, has five certificated and twelve pupil teachers. And it should be added, that the few schools named have already supplied,

solely in consequence of the system adopted in them, besides a certain number of teachers and assistant teachers, no fewer than sixteen Queen's scholars, by whose skilful labours the general progress of elementary education will hereafter be importantly aided.

I notice these simply as characteristic examples of the solid advantages resulting from connexion with the Committee of Council, and of the increase both of attendance and efficiency which almost invariably follows from it. It is not necessary to add to the number; but I am anxious, before leaving this point, to say a few words with reference to the progress of the same work in the most important city of my district.

London.—In a former report I expressed my unfeigned regret at the vast disproportion between the educational wants of London and the efforts made to supply them. It might indeed have been said in reply, with great justice, that the difficulties and obstacles which impede the successful accomplishment of this work in the metropolis assume dimensions which do not exist elsewhere; and that it was almost necessarily abandoned in past times to isolated individuals, aided only by their own inexhaustible zeal and charity. Since the date of that report, great and continued progress has been made, worthy of special record, and not surpassed by similar events in any part of my district. I know few schools which present more remarkable features, especially to the experienced eye, accustomed to look under the surface of things, than those of Blandford Square; Chelsea, St. Joseph's; Hammersmith, St. Mary's; Dunne's Passage, Holborn; and Tudor Place; and they are not the only ones of their class. It is, however, no disrespect to the admirable persons by whom they are conducted or superintended, but rather the most appropriate acknowledgment of their wise and patient labours, to say, that there was a time when they did not display the excellence either of discipline or instruction which they have subsequently attained. And it must once more be observed, that the schools enumerated, and this is equally true of all which resemble them, have not only themselves—with the exception of Dunne's Passage—profited largely by the services of intelligent and industrious apprentices, but in doing so have become nurseries of valuable teachers, *who would never have been formed but for the system now in operation.* In estimating the general results of that system, this is a point worthy of special consideration; that the good work effected in one school overflows the narrow limits of a particular locality, and spreads its fertilising influence on every side. The local advantage becomes a general one, and they who seemed to labour only for themselves, are found to have become the benefactors of

others. Without the admirable scheme of apprenticeship, for which the country is indebted to the Committee of Council,* the great majority of schools must still have been entrusted to feeble, untrained, and untrustworthy teachers, capable, perhaps, of receiving a salary, but not of rendering the services by which alone it could be fairly earned. There are many cases of gratifying progress in the London schools during the past two years which do not call for special notice; but there is one so remarkable, on every account, that I should omit the most striking fact in my recent experience if I did not recommend it to the attention of school managers. As an example of what can be accomplished by the religious zeal and prudent energy of an individual clergyman, it is without parallel in my district, and perhaps in any other. I allude to what has been done towards providing education for the children of the labouring classes in the district of the Commercial Road by the extraordinary efforts of the Rev. William Kelly. This gentleman is the pastor of a congregation amounting to nearly twenty thousand souls, every member of which he has visited personally, and of whose names, families, residence, and occupation he has obtained, by infinite labour, an exact and methodical record. It was no light task to undertake, single-handed, to deal with the educational wants of such a population. Seven years ago, one school, at that time under the charge of Christian Brothers, represented pretty nearly the whole work then in progress; for though there were other schools in the district, yet the actual results accomplished in them, owing to the deficiency of accommodation and apparatus, to say nothing of the imperfect qualifications of most of the teachers, must have been almost inappreciable. There are now, besides a number of smaller schools, still imperfectly organized and not under official inspection, three large and costly buildings, situated respectively in Pell Street, John Street, and Red Lion Street, in which I found at my last visit 1,078 children, taught by seven teachers and seventeen pupil-teachers. An equal number are lodged in provisional schools, of which at present I do not offer any account. How this accommodation has been provided, and by what means the large expenses of such institutions are defrayed, is a secret, of which the only explanation is to be found in the fearless and trusting charity which has inspired such efforts, and which appears to find sufficient courage in

* Monsieur Lorain remarks, that this ingenious system was first planned in Holland, "but that its extensive application has been made with such skill and success in England, that she has almost made the invention her own, and that all the promoters of schools concur in regarding it *as the real cause of the regeneration of popular education in that country.*"—*Le Correspondant*, p. 270.

acting upon the great principle, *Omnia possum in Christo.* I must add, with regret, that with one or two exceptions, the teachers at present engaged are not of the highest order. But the only training schools to which Mr. Kelly could have recourse have not yet begun to supply an adequate number of teachers; and the most energetic school manager has no alternative but to acquiesce in the temporary employment of defective instruments, who bring at least zeal and industry to the discharge of their duties, though they do not possess that combination of strong personal influence, refinement of character, and knowledge of scientific methods, which constitutes the highest qualification of a teacher. Without multiplying examples of similar progress, or insisting further upon the illustration which they afford of the truth of my first position, that the creation of one good school is sure to be followed by the foundation of others, and that a general disposition to co-operate with the Committee of Council has been induced by the uniform improvement visible in schools which have received their aid, I pass to the next point.*

Security for permanent efficiency.

Besides the actual and undeniable good effected in particular localities, intelligent persons have not failed to remark, that provision is being continually accumulated under this system for the future and permanent efficiency of the whole body of elementary schools. They will not henceforth be left to the uncertain zeal and fluctuating resources of individuals. The wise measures which have assisted to make them what they are, will also keep them so. It is a notable circumstance that in the schools with which I am specially concerned, forty thousand children have already come under inspection, and that the schools which they frequent are taught by two hundred certificated and six hundred and fifty pupil teachers. But this fact must be viewed in connexion with another, to which it has led, and which is of still greater moment. Three training schools, attended at this moment by about 110 students, and destined to receive a much larger number, are now in active operation. These institutions are absolutely necessary to the future welfare and success of our schools; yet it is no exaggeration to say that they owe their existence to our connexion with the Committee of Council. The material buildings might

---

* *Le Correspondant*,—a Review conducted, as is well known, by some of the most eminent men in France,—in an article published on the 25th of September 1856, under the head of *l'Education Populaire en Angleterre*, p. 978, has the following remarks:—"Les 6,000 écoles qui ont surmonté leurs premières répugnances pour accepter les secours et les conditions du Comité d'Education du Conseil de la Reine n'ont pas eu à s'en repentir. L'inspection les a, pour ainsi dire, transformées, et ses effets se sont étendus jusqu'aux écoles mêmes qui se défendent encore contre toute influence étrangère par un esprit d'indépendance mal interprétée.

indeed have come into being without its aid, for two out of the three have been erected at the sole cost of the promoters; but only the system actually in operation could have provided these normal colleges with a really valuable and promising class of students, nor could their annual expenses have been defrayed without Government grants. To the measures devised by your Lordships we owe, therefore, the creation of a body of more than six hundred assistant teachers, who are first trained during five years at the cost of the State, and then maintained during one, two, or three more by the same judicious and generous policy in institutions formed expressly with this object, and conducted with every guarantee for complete success. It is not wonderful that such manifest advantages should have been appreciated, nor that thoughtful and conscientious school managers should do justice to the double character of the excellent system out of which they arise. If it had only afforded *present* aid, and relieved *present* difficulties, the boon would have been most acceptable; but the machinery which deals with the urgent necessities of the hour, provides also for those contingent ones which may present themselves hereafter. It does not do its work by halves, nor legislate for to-day without caring for the future. It not only builds schools, but helps, with provident and ingenious forethought, to form the teachers who are to conduct them. It may be doubted whether a more excellent method of co-operation for educational purposes between the executive and the people has ever been framed, and it is within my personal knowledge that foreign statesmen and ecclesiastics have spoken of it with envy and admiration.

Confidence in the Committee of Council.

Whatever effect the considerations already alluded to might have produced on the minds of school managers, and however forcibly they might have disposed them to accept their share of assistance from public sources, it is evident that the grants proffered to them would have lost all their attraction, or rather would have been rejected as a snare and a temptation, if they had not been satisfied with the mode of their administration, and with the conditions attached to their reception. Any suspicion of unfair play, or of secret motive and design, would have sufficed to repel the neediest applicant, and to have reconciled him to poverty and isolation. And such an attitude of distrust would have been perfectly rational. In a matter which touches by so many points of contact as education the public conscience, the secret springs of religious life, and all its most sacred convictions and inalienable rights, no precautions can be excessive, nor any watchfulness exaggerated. In such a case misgiving is prudence and suspicion may become a duty. In former years I have witnessed ex-

amples of both; and some few may even now be met with, though with less reason, and almost always in company with more or less complete ignorance of what is being done, and the manner of its doing. But the operations of the Committee of Council on Education, as well as the principles of their administration, have now been subjected for many years to public scrutiny, which their authors have rather invited than attempted to baffle or evade. The history of conflicts and discussions to which they gave rise, once animated and even vehement, but which seem at length to have lost all their meaning and interest, might now be written. We have seen opposition become fainter and fainter, and gradually expire. Experience has generated confidence; and whilst no openly antagonistic school any longer claims the attention of the public, and systematic hostility hardly finds a pretext for displaying itself, the most cultivated and vigorous minds of all parties appear to have recognised the admirable good sense, habitual moderation, and skilfully applied experience of that department of the State to which the interests of public education have been confided. But I am concerned rather with those special and particular illustrations of this truth which belong to my personal experience than with the general and patent evidences which a larger field of observation has enabled others to collect, and which they are better qualified than myself to estimate. I shall refer to one or two of them; but before I do so, I may state, as a general rule, and subject to any protests which individuals may choose to make, that the managers of schools with whom my official duties immediately connect me seem to be nearly of one mind in their appreciation of the immense services which the Committee of Council on Education are rendering to the nation, and of the spirit of fairness, discretion, and practical wisdom with which they are performed. No doubt there are instances in which offence has been given to individuals. One has resented, if only for a moment, the rejection of a favourite teacher, who has had more success in deceiving a partial manager than in persuading an official but just examiner to accept his sham qualifications for realities. Another has recalcitrated with transient indignation against the superfluous and costly refinement of "a boarded floor,"—especially if he had just laid down a new one of tiles or asphalte. Such cases are really rather provoking. A third has been a little ruffled by the voluminous correspondence in which some question of detail has involved him, and which he considers, though he seldom retains this suspicion long, was extended to undue limits on purpose to annoy him. Some few, perhaps, have not always been pleased with the Inspector,

who sometimes reaches the scene of his labours after a tedious and fatiguing journey, and the unsatisfactory diet of a provincial inn, and may be tempted by these combined evils to display infirmities of temper which they are apt to provoke, and the liability to which he shares with the rest of the world. But my memory supplies me with very few instances of this kind. In eight years,—and this is worthy of mention as indicating the cordiality with which your Lordships' official agent has been greeted,—I have only twice encountered a reception which even approached to discourtesy; and such rare and exceptional cases have been only too amply atoned by innumerable acts of kindness, forbearance, and generous hospitality, which I remember with unfeigned pleasure, and of which I cannot too warmly express my grateful acknowledgments. In confirmation of the statement which I have ventured to make with respect to the general, I might almost say, universal, approval of the measures of the Committee of Council, and the mode in which they are practically applied, I am able to refer to two striking facts amongst many similar ones, of which one may be taken to represent the sentiments of the most active and experienced school managers amongst the clergy, whilst the other, considering the dignity of the eminent name with which it is connected, is a conclusive and final testimony on the part of authorities whose deliberate statements on so grave a point are not only suggestions but laws, not only opinions but edicts. One of the most intelligent and energetic of clerical school managers, who has himself created schools of the highest class, of which he maintains the efficiency by indefatigable supervision and no small expenditure of thought, has recently published his sentiments on this subject. The great value of his testimony, which none can be more competent than himself to offer, consists in this; that it attests both the strict impartiality and practical sagacity of the measures which have been daopted, and are continually receiving their application, under your Lordships' sanction. He seems to have been especially struck, as others have been, with one characteristic of the administration which he criticises. The Committee of Council on Education, he observes, though not in the very terms which I employ, assist the projects of school managers, but neither initiate nor give shape to them. They aid, but do not control; encourage without dictation; and having no end in view but the common good, whatever tends to secure it is sure to attract their approval. They suggest improvements, but impose none which are not absolutely necessary to the life of a school. They offer their accumulated experience to all, but do not even claim to enforce it upon any. The very

agents whom they employ, and through whom alone they acquire all their knowledge of the cases proposed to them, and all the evidence of the fulfilment of their conditions, are chosen from the body whose interests are at stake, and to whom belongs an absolute *veto* on their appointment. When they are most vigorous and exacting, it is only to secure those very conditions of solidity and permanence, in the attainment of which the applicants for their aid are far more deeply concerned than themselves; and having wisely refused to adopt as their own any cherished and inflexible system to the exclusion of all others, they leave each, with a prudent eclecticism, to work out, within the limits of what is true, practical, and expedient, that which he has been accustomed to pursue. It would be difficult to devise a scheme in which the advantages offered should be burdened with less onerous conditions, or which should effect so large a measure of definite and increasing good without even the semblance of vexatious meddling or tyrannical interference.*

It is a peculiar gratification to me to be able to conclude these remarks with the following extracts, which will be found to supply all the confirmation they can need, from a published document which is now before me, and which is entitled "*A Lecture on Education, delivered in St. Mungo's Parish Church, Glasgow, on Sunday the 26th of October* 1856, by the Right Reverend Bishop Gillis, Vicar Apostolic for the eastern district of Scotland."† After urging upon his audience "the great advantages you may derive, both for the extension and efficacy of your schools, from endeavouring to avail yourselves of the Privy Council grants," the Bishop proceeds thus:—

"To test the beneficial nature of these grants by a higher standard, to judge the tree by the fruits it has already produced; pray open, and examine for yourselves, the volumes of information which have year after year been published upon the subject by the Government Inspectors; and if there really be as much truth in the assertion of our poverty, as is sometimes, perhaps, too readily taken for granted, sum up, in the first instance, the amount of pecuniary relief we have here placed within our reach, and tell me, if we be altogether justified in rejecting it, considering what may be done by its judicious application towards meeting the avowedly numerous and hitherto unsatisfied wants of our youthful poor. . . . . But there is

---

* It is both interesting and instructive to see how this system is appreciated by the most competent authorities in other countries. *Le Correspondant*, (the Review before quoted) thus sums up, in an elaborate article published on the 25th May 1856, its minute and accurate observations on this point:—"L'action de l'état dans l'école est donc toute de bienveillance. Elle ne s'impose nulle part; elle se fait plutôt désirer; et, quand elle est acceptée, elle ne refuse pas plus ses bons conseils que ses secours pécuniaires. Mais elle se garde bien de s'immiscer dans la direction et l'administration des écoles, les abandonnant à l'indépendance du régime administratif, religieux ou pédagogique, *sous lequel elles se sont librement constituées.*"—*De l'Education Populaire en Angleterre* p. 252.

† London, Dolman.

more in the above reports worthy of your attention than the mere aggregate of monies granted to our poor schools. You may there read likewise . . . . of the marked and extremely creditable improvement that has taken place of late years in the proficiency both of teachers and pupils *within the schools thus assisted;** till not a few of them have taken rank on the highest level of instruction yet anywhere reached throughout the kingdom."

After alluding to "the greatly increased number of competent school masters and mistresses" whom the training schools now in connexion with the Committee of Council may be expected to furnish, the Bishop concludes as follows:—

"But, with all these advantages, are there no dangers, it has been asked, to be apprehended for Catholics from this Government system of education? In the first place, I repudiate altogether the wording of the question; for there is here, in fact, no Government system of education. It is simply the imparting of Catholic education, under circumstances more favourable, and of greater efficiency, than we could otherwise command, and for which we are in part indebted to the pecuniary assistance granted to us, as to others, from the public funds of the country—under the sanction of Parliament, it is true, but without either ulterior object or control. Could I be brought to believe that it were otherwise, I, for one, would rather put my right hand into the fire than extend it to receive a single grant from Government. But I have now had for several years as near opportunities as most people of watching the every-day working of these grants; nor have I lacked the determination to do so with an unsparing eye; and I owe it to the truth to declare, that I am thoroughly convinced there is no danger of undue State interference to be apprehended from our accepting these grants. What we have now exclusively to deal with, viz., the liberal opening up of the public treasures by the Government of Great Britain for the purposes, as far as it can promote them, of free education, without any reference to religious differences, or interference of any kind with religious scruples, appears to me, in our present phase of society, to be in itself a measure of such just and timeous policy as to demand from me here the fearless expression of my most grateful commendation."†

It is evident that after such a declaration, proceeding from such a source, there is nothing more to be said on this head; and I may claim to have proved my third point, that growing confidence in the Committee of Council is one of the motives of that rapid increase in the number of inspected schools, of which I am endeavouring to explain the causes.

Character of non-inspected schools.

Although unwilling to say much upon a somewhat invidious subject, the general character of non-inspected schools, yet I cannot reasonably omit all reference to it, nor doubt that it has exercised some influence in determining the conclusion at which thoughtful persons have arrived with respect to the expediency of connecting their schools with the Committee of Council on Education. If any school managers who have hitherto declined, for various reasons satisfactory to their own minds, to receive their share of aid from the parliamentary grants, consider that the schools which they

* The italics are not in the original.
† pp. 28, 29.

conduct are in all respects in an efficient and thriving state, I can have no wish to endeavour to disturb that impression. I can conceive that there are such schools, though not personally acquainted with them; but if they exist, their number must be very small, and their merit, whatever its degree, must be due to special causes, which cannot fairly be expected to operate on a large scale, nor in the majority of elementary schools. No doubt a school which is under the charge of an adequate number of duly qualified teachers, possessing a sufficient knowledge of technical methods, and performing their duties in a spirit of religious zeal, may be perfectly independent, as far as its own progress is concerned, of the various kinds of aid administered by your lordships; yet, I cannot but think, that to estimate the number of such schools with perfect accuracy, must be an arithmetical feat within the capacity of a child accustomed to deal only with the smallest possible array of figures. I observe too, that it is precisely in schools of the class which I am supposing that the benefits of the existing system appear to be most warmly appreciated and most copiously developed. They have become what they are, almost without exception, by the judicious application of that very system, and their teachers and managers are not slow to confess it. But if, even in the case of schools in which the most important elements of success are found, accomplished and assiduous teachers, adequate resources, and diligent supervision, great advantages are obtained, and a more vigorous life promoted by the influence of official inspection, the services of apprentices, and the aid of annual grants; how much more needful must all these helps be to a school which is abandoned, as by far the larger number are, to a solitary secular teacher, not often swayed by the loftiest motives, generally feeble and inexperienced, and not seldom hopelessly incompetent. Such schools, unless they receive some new impulse from without, must of necessity continue to be just what they have ever been any time during the last fifty years. I need not describe their well-known features.

But with every desire to respect the convictions of individuals, and to accept their own account of their own work, I am bound so say, that although I have visited certain schools privately, of which the promoters hesitate at present to receive official aid, very few of them appeared to me to have any solid merit, and even these few could easily be made much more efficient. Nor does it appear, as far as my qualifications and opportunities enable me to judge in so delicate a matter, that as a rule, and allowing for partial exceptions, the religious instruction is more complete and effective in non-inspected schools than the secular. I might refer, if it

were expedient to do so, to unexceptionable authorities in support of this statement. Indeed it seems almost a truism that some exact and methodical cultivation of the mind and discipline of its powers is, if not absolutely necessary, at least highly advantageous to the profitable study of sublime truths, which, though addressed primarily to faith, and not to reason, have yet an intellectual basis. No one will maintain that either want of accurate knowledge, or chronic mental apathy, are the best aids to the comprehension of that majestic revelation which eludes indeed the grasp of the most piercing intellect, but still condescends to appeal to it; and, while it soars far above the reach of human reason, must ever be the noblest sphere in which it can be exercised.* One of the most striking and important facts within my experience is the uniformity of opinion on this subject which appears to prevail amongst teachers of the highest class. The best educated children, they tell me, are, as a rule, the most religious. And it is certainly an instructive consideration, which I earnestly submit to those who will be most disposed to appreciate it, that whilst a certain number of young persons educated in our primary schools have within the last few years embraced that perfect kind of life, in which the most heroic charity finds its daily work, and to whose lofty maxims they are pledged by an immutable resolution,—I allude to the religious and educational communities,—they had all, without exception, received first that careful and special intellectual training, which, if it did not actually determine their subsequent vocation, at least in every case preceded its development, and prepared them for its surpassing privileges. I will only add on this point, because it is a reflection with which I may reasonably conclude my unwilling allusion to the character of non-inspected schools, that I believe there is no civilized country, either in Europe or America, in which the State does not assist the course of popular education, and even, within certain defined limits, guide and direct it. If a false principle is involved in this state of things, why has it been everywhere admitted? If every community possessed the necessary means of educating its own children, why has it not done so? Why fill the air with lamentations of poverty and incapacity, if after all external aid was not needed; or clamorously resent as an injustice the refusal of assistance, if it was only to be spurned when offered? The State has in

* The most remarkable example which I have seen of intellectual instruction in religious subjects is in the school at Alton, St. John's, Staffordshire, where an eminent theologian and philosopher does not disdain to instruct children in the theological bearings of the fundamental truths of Christianity, with a solidity and precision most worthy of admiration, and the methods of whose teaching it is a high privilege to have witnessed.

all countries undertaken a duty, though with various degrees of wisdom, moderation, and generosity, which is everywhere confessed to be one of its natural functions,* free from all necessary taint of injustice or usurpation, and to the performance of which it has everywhere been invited by public acclamation. Let it then have praise where it deserves it; and let the aid which it is bound to give, in furtherance of the highest interests of society, be neither imprudently rejected nor ungratefully received. For my own part, though I certainly hear of persons said to be opposed on principle to the reception of educational grants, yet I do not know a single school manager who has assumed the responsibility of putting the objection into words, either written or spoken. The number of such objectors must, I conceive, be very small, since one never encounters them. It is really absurd, and scarcely honest, to magnify these few individuals into a "party," as if either by their numbers or their authority they could be made to counterbalance the multitude of distinguished authorities, as well as of experienced and active school managers, who energetically repudiate their principles. Nothing, I believe, can be more inaccurate, nor more disingenuous, than to speak, as some do, of "the party opposed to Government aid." There is no such party. There *may* be, and no marvel, a very small number of persons, who, speaking generally, and admitting rare exceptions, have less to do than others with promoting public education; who have either no schools at all, or very feeble ones; who do nothing, nothing whatever, not even what they might do without effort, to help on this great cause; who leave to others the burden of the work, and only make their own voices heard to throw doubts upon its character; who question the value of efforts in which they have had no share, and affect to depreciate results which have been accomplished without their aid, and sometimes in spite of their opposition; who are silent when they ought to speak, and speak to no practical purpose; who only interfere in order to check and not to aid, to thwart and not to encourage; and when others point to the advantages which they are prudently and religiously securing, feebly utter a *Timeo Danaos*, and make their own indifference or effeminacy the measure of other men's diligence and strength. If there are any such persons, I do not know them; I never saw nor heard them; but at all events, if any such exist, they can hardly expect that a great and noble end is to be weakly abandoned because *they* disapprove the means by which it is being gradually and surely attained. When I hear of one

* I may refer, for a striking example, to the emphatic language of Monseigneur Dupanloup, Bishop of Orleans, in his work *De l'Education*.

intelligent and educated person, having the active supervision of large and important schools, conducting them with complete success without external aid, and rejecting on conscientious grounds, and after due examination, the proffered pecuniary grants, I will give to this phenomenon the serious attention which it may seem to claim. Meanwhile I oppose to a possible and isolated fact of this nature the definite acts of no less intelligent and conscientious persons, who form an immense and constantly increasing majority, and whose palpable and emphatic testimony on this subject has been clearly and unambiguously offered. I will observe also, in conclusion, because some stress has been laid on this fact, that, if the Irish Christian Brothers, who have not now, I think, more than five or six schools in the whole kingdom, decline Government aid, perhaps because they erroneously assume the English system to be identical with the Irish; the French who are also established in this country, and who possess the true traditions of that illustrious community, freely accept it, with the knowledge and approval of their superiors.

Capitation grants.

There can be no doubt that the extension of the capitation grant to schools of all classes is a measure which has been greeted with universal satisfaction, and the application of which is destined to produce highly beneficial effects throughout the country. It is also, for obvious reasons, a persuasive and almost irresistible invitation to connexion with the Committee of Council. Many persons had remarked, in past years, what they considered to be an erroneous principle in the administration of the parliamentary grant. It was distributed, they thought, in too rigorous a proportion to the amount of voluntary effort which it professed to supplement; being ample and profuse where it was least needed, and doled out in scantiest measure exactly where liberal aid was most urgently required. Reversing the Evangelical maxim, it was superfluously gracious to the opulent, but turned a cold glance on the poor and needy. Many school managers have expressed to me their cordial approval of the capitation grant, not so much on account of the actual pecuniary benefit which they hope to derive from it, as because it is based upon what they deem a sound and acceptable principle. If I had any right to speak in my own name, I should say, that the average attendance in a school should be regarded, as far as possible, as the basis of all grants made to it. The extension of the capitation grant appears directly to encourage this view. But it has another merit. Every one knows that it is the clergy, and not of one class only, upon whom the burden of supporting elementary schools chiefly, and often exclusively falls. They accept this

obligation, for the most part, with singular cheerfulness and alacrity. But it is a wise policy which offers relief to those who, whilst they most need, are slowest to seek it. The capitation grant in some measure does this. It is a boon to school managers, that is, to the class without whose generous efforts popular education would speedily languish, and upon whose stedfast zeal and charity its continued progress absolutely depends. The state may aid, but cannot possibly supersede the energetic and costly labours of these true friends of the poor. Hitherto it has assisted in the erection of the material fabrics, the supply of apparatus, and the training of teachers; henceforth it wisely proposes to contribute a sustentation fund, on a well adjusted scale, towards the general expenses. I believe I only represent an almost universal sentiment, when I say that the widest possible application of the principle of the capitation grant is what the interests of public education now demand. Let voluntary efforts be aided; but since the regular and punctual frequentation of school is at once the most important and the most difficult end to attain, let school managers who have proved that they know how to attract and retain their scholars receive the largest share of succour. In other words, let assistance be proportioned, not to the ostentatious and sterile display of local resources, but to actual work accomplished in spite of all difficulties and obstacles. An army of idlers has less claim to public sympathy and aid than a single family of orderly and diligent labourers, who contribute to the general prosperity while they soberly pursue their own.

Public discussion,

The last consideration, to which I will refer in very few words, relates to the effects of public discussion, based upon an accurate knowledge of the facts of the case, in disposing the friends of popular education to recognise the services of the Committee of Council, and to co-operate for the greater advantage of the work they have in hand with that branch of the civil administration. There were only two points upon which discussion could turn in past times, nor can its limits be extended so as to include others at any future period. Of these points one refers to the *general principle* of co-operation with the State for educational purposes, the other to mere questions of *detail*. In other words, the only subjects of inquiry were these two:—(1.) Was it right to accept grants at all in aid of local efforts? (2.) Were the conditions attached to the several grants acceptable? As respects the class of school managers with whom I am personally connected, both these questions have long since been answered in the affirmative. Nor was the decision taken without mature consideration on the part of competent authorities. The *general principle* cannot now

be impugned or repudiated without implicitly condemning the eminent persons of various orders and stations in almost all the civilized states of the world, who have with grave deliberation assented to it, and even urgently provoked its application;* and the *details* of administration, which confessedly owe their form and character to a large experience prudently applied, may safely challenge adverse criticism. The only argument, therefore, which remains to objectors, and it is one which I have sometimes encountered, is directed not so much against the system actually in operation, as against possible and contingent abuses of it. They willingly concede that it may be fruitful of good now, since so many wise and experienced persons assert that they find it to be so, but deny that it is safe from change and corruption. Accordingly they claim the right to maintain still an attitude of reproof and suspicion; to keep aloof from dangers which, if not imminent, are at least conceivable, and even to admonish, by words and acts of disapproval, the generous and confiding zeal which they deem incautious, dangerous, and indiscreet. I must repeat, that I know very few persons who use this language, and that they seem to be sufficiently refuted by that active and laborious majority which so plainly disavows all sympathy with their peculiar sentiments: but since such opinions exist, and must be supposed to be conscientiously entertained, they may fairly claim to be noticed. Although I have certainly no authority, and as little capacity, to deal with such objections, yet since I have undertaken, from grave and sufficient motives, to discuss the whole subject, I conceive that it would be a false delicacy to shrink from alluding to this part of it. I might indeed content myself with repeating once more the emphatic words of Bishop Gillis, and say with him "I am thoroughly convinced there is no danger of undue State interference." But since argument has been applied on one side, there is room for it on the other. It seems almost puerile to insist that the government of this great and free empire has nothing to gain by acquiring "undue influence," whatever this may mean, in directing the course of public education, even if it could succeed in doing so. Its energies are devoted to other objects, its powers absorbed by far other cares; and while it maintains, at all costs, the doctrines of constitutional liberty throughout so large a portion of the world, it can hardly be tempted to subvert them in elementary schools. If it is a watchword of freedom to grown

* Monseigneur Dupanloup, whose authority in such a matter will hardly be contested, distinctly maintains, that to assist the progress of public education is one of the most imperious duties of the civil power.

men, it has really no motive for tyrannising over little boys and girls. The objection, considering the suspicion upon which it is founded, seems therefore *primâ facie* absurd. But even if we allow, with superfluous candour, that some dark and subtle design may possibly lurk under the whole system, we may find consolation in these two considerations; first, that it is not at all likely to succeed; and, secondly, that if it did, we should be none the less able to resist it, because we had once profited by what is really good in it.

(1.) It would be unlikely to succeed,—one is almost ashamed of discussing these puerilities gravely,—because it has actually failed even in countries, as in France, where there is far less disposition than amongst ourselves to resist encroachments of this kind. I will venture to add, that it would be *certain* not to succeed, because Englishmen will always claim the sacred privilege of educating their children according to their own views of what that term includes.

(2.) But if this foolish and criminal project did succeed, I submit to the sensitive few, whose alarms I seek to allay, that the remedy would be in their own hands. I claim the liberty of stating plainly what it would be. Their fears, I am sure, are perfectly chimerical; the whole course of modern history, the present condition of Europe, the instincts of their countrymen, prove that they are so; but, if the day ever arrives which shall justify their prophetic warnings, and an attempt hereafter be made to introduce a compulsory system of national, mixed, or irreligious education, they will simply reject it then, as they would reject it now. Meanwhile, I think they may contemplate these visionary dangers with considerable equanimity, and use with a tranquil conscience the assistance offered to them. No wise traveller would refuse to slake his thirst at a well, because a hundred years hence it may possibly be poisoned.

Summary. I have now enumerated all the points which seemed most worthy of notice in the discussion of this subject. Many, however, have been omitted for want of space. I might have replied to the unreasonable reproach that the system offers undue encouragement to secular learning at the expense of religion, by observing—that wherever this delicate function is conceded to the Inspectors, they do investigate most minutely the character of the religious instruction. So wholly untrue is it that your Lordships encourage the neglect of the most important branch of education, or affect indifference with respect to it. I might also have called attention to the fact that, already, in many parts of the country, the attendance of children in elementary schools has increased from 1 in 17 or 18 to 1 in 5 or 6, of the population; but

enough, perhaps, has been said, and I may now hasten to a conclusion. In my district the past year has been again, with inconsiderable drawbacks, a year of solid progress. I shall defer some observations upon the teachers and pupil-teachers to my reports upon the Training Colleges, in which they will be more conveniently introduced. Meanwhile I conceive that I am simply discharging a duty, both to my own conscience and to the school managers with whom it is my privilege to co-operate, when I say, appealing confidently to their testimony in confirmation of the statement, that the skilful and patient labours of the excellent teachers whose success I have so often to record have hitherto been importantly aided, and will no doubt continue to be so in an increasing measure, by their connexion with the Committee of Council, and by the manifold benefits which they derive from it.

I have the honor to be, &c.

T. W. M. Marshall.

To the Right Honorable
The Lords of the Committee of Council on Education.

* The number of Schools inspected during the year was 107; but from 41 of these no sufficient returns of income and expenditure have been received.

† Exclusive of Government grants.

GENERAL REPORT, *for the Year* 1856, *by Her Majesty's Inspector of Schools*, SCOTT NASMYTH STOKES, Esq., B.A., Barrister-at-Law, *on the* ROMAN CATHOLIC SCHOOLS *inspected by him in the* NORTHERN DIVISION *of* GREAT BRITAIN.

MY LORDS, January 1857.

Increase in number of children attending Roman Catholic Schools.

IT is a circumstance which cannot but be considered remarkable that the children actually present in schools visited by me in the year ended 31 August 1856 exceed by some hundreds the total number returned in the Educational Census of 1851 as at that time attending all the Roman Catholic schools within the limits of my district. As many schools in country places, and a few in towns, remain still uninspected, the conclusion is inevitable that, within the five years which have elapsed since 1851, a most gratifying increase has been effected in the number of children attending Roman Catholic schools. Indeed, experience disposes me to think that the difficulty in obtaining the attendance of children has been sometimes exaggerated; or, perhaps, it would be a truer representation of the case to say that my district is not yet so largely supplied with the means of education as to render it difficult for a well-conducted school to attract a suitable number of scholars. Certainly, I am acquainted with no instance in which good schools have failed to do so.

Employment of time.

The 24,388 children, whom I have visited during the year, were collected in 221 departments of 135 institutions, and their examination occupied me during 147 days. Three days were spent in visits to the training schools at Liverpool and Hammersmith. Twenty-one collective examinations of pupil-teachers afforded opportunity for the examination of 634 apprentices and candidates, whose papers were afterwards revised. For 33 days I was employed in holding three examinations of candidates for the certificate of merit, and one for Queen's scholarships, and in revising 695 papers then produced. Long journeys have filled up 11 days; and reporting, correspondence, and vacation have consumed the remainder of the year.

Comparison of 1853 and 1856.

Before offering any remarks upon the points brought particularly under notice during the past year, I wish to illustrate

the growth of inspected schools by a comparison of the results of inspection in the two years 1853 and 1856:—

——	1853.	1856.	Increase.
Schools - -	60	135	75=125 per cent.
Children - -	9,621	24,338	14,767=153 per cent.
Apprentices - -	105	369	264=251 per cent.
Certificates - -	25	92	67=268 per cent.

As it has taken three years to accomplish the progress indicated in the above table, the average yearly rate of increase has been, in schools 42 per cent., in children 51 per cent., in apprentices 84 per cent., and in certificates 89 per cent. Should a corresponding rate of increase be maintained, (and the operation of the new training schools will probably augment it,) I shall be under the necessity of soliciting assistance in the discharge of my duties. Indeed, I can scarcely hope in any future year to get through the work lying before me.

Locality of increase.

The localities where schools have chiefly increased will be seen below:—

Number of Schools Inspected.

——	1853.	1854.	1856.
Lancashire - - -	32	63	81
Four Northern Counties - -	10	19	18
Cheshire, Salop, and North Wales	5	5	11
Scotland - - - -	13	20	25

Journeys.

My duties would be less arduous than they are, were the schools which I have to visit situated within an area of moderate dimensions. This year, even more than formerly, much time has been spent in travelling; since Roman Catholic schools in Invernesshire have, for the first time, received annual grants. The conference also of Inspectors in London, and the summer examinations in Sunderland and Preston, however useful or necessary, interrupted distant tours of inspection, and multiplied the days lost in passing from place to place.

Training schools.

As the normal institutions for teachers will form the subject of special report by Mr. Marshall or myself, it is unnecessary to allude to them here further than to observe, that the establishment of the Liverpool training school, and the enlargement of St. Mary's, Hammersmith, have a certain tendency to remove the most serious obstacle to educational progress, by

the gradual introduction of a large supply of qualified teachers. Meantime the demand for such teachers continues unabated; and to one of them I lately gave the names of the managers of 18 schools, who within a limited period had applied to me for certified schoolmasters.

Examinations. Examinations were held before me in December 1855, of female candidates for the certificate of merit, and of female candidates for Queen's scholarships; and in June 1856, of male and female candidates for certificates. The scholarship examination, which was the first of its kind ever open to female Roman Catholic apprentices, attracted 30 candidates, and resulted in the success of 29 of them, of whom 19 sought admission into the Liverpool training school, and the remainder were otherwise disposed of. It is worthy of remark that nearly all the first-class scholars had enjoyed the privilege of serving their apprenticeship under religious teachers. The recollection of the school-mistresses' examination in December 1855 will never fail to excite feelings of thankfulness and confidence. It was no small gratification to preside on an occasion which brought together so much elevation of character combined with an ability quite uncommon; and it is consoling to reflect that the education of children intrusted to such hands cannot fail to produce the fruits—sometimes vainly expected from it—of social well-being and Christian virtue. Of 33 candidates then collected, two retired early in the examination, and 26 obtained certificates. At the summer examination of schoolmistresses held in Sunderland, out of a very few candidates, two were successful; and of 11 masters examined in Preston, nine gained certificates, and the others were fully registered.

Certificates. During the past year the number of certified teachers has risen from 59 to 92, an increase due almost entirely to the success of untrained teachers in the examinations already recorded. The training schools, however, will begin henceforward to enrich the class lists; and even at Christmas 1855, Hammersmith sent into the north three certified students. An impression prevails that students placed in this training school will, on leaving the college, be detained in the neighbourhood of London; but without reason. The college authorities decline to interfere with the appointment of students to schools: and the managers of any school may, if they will, follow the plan adopted at St. Peter's and St. Paul's, Bolton-le-Moors; where the boys' and girls' departments are both in charge of young teachers originally apprenticed in the school, then trained as Queen's scholars at Hammersmith and Liverpool, and now usefully employed as teachers in a sphere where their characters are well known and equally respected. It is of consequence that the impression

to which I have alluded should be removed; becaus, since the Hammersmith College trains masters for the whole island, and the untrained masters have now had so many opportunities of obtaining the certificate that few remain without it on any other ground than that of incompetence, the accession of new certificates will depend almost wholly upon recruits from Hammersmith, and the number of certified masters returning to the north will be mainly regulated by the number of Queen's scholars sent up by the north. There seems, therefore, to be no way in which school managers can so well serve their own and their neighbours' interests as by leading their male pupil-teachers, together with other qualified candidates,* to offer themselves for scholarships. The instinct of a young trained master leaving college carries him back to the scenes and friends of his apprenticeship; and it is certain that five years hence the districts best supplied with schoolmasters will be those that now furnish most Queen's scholars. Masters, untrained themselves, cannot be expected to inculcate to their apprentices the importance of training. Those who are satisfied to have "scraped through" the examination are not likely to inspire their pupils with the generous sentiment that their chief aim should be, not to gain the certificate and its emoluments, but, to qualify themselves honestly and thoroughly for the honourable position they are invited to fill. Some even,—they are very few,—may raise obstacles, and dissuade their apprentices, in the apprehension that the scholarship examination of the latter will betray their own shortcomings in industry or ability. It will be a happy day when such persons are driven from posts which they disgrace. Meantime, school managers may counteract the evil counsels of others by encouraging pupil-teachers to regard the training college as the natural conclusion of their apprenticeship, and to exert themselves heartily to prepare for it, as well as by requiring from them some reasonable grounds before they acquiesce in an intention to avoid it. My apprehensions confine themselves to male apprentices. The girls, for the most part, are in excellent hands, and the Liverpool training college will admirably complete for them what has been so well begun.

Assistant teachers.

Six male apprentices and two females have, at the close of their term, become assistants under your Lordships' Minutes, and the demand for this species of help exceeds the supply. Some of them have been engaged with especial view to night schools; but the arrangements for their employment are not free from difficulty, since the assistant is not found to have

* By Minute of July 1856, a certain number of scholarships may be taken by any persons, not under 18 years of age, presented for examination by the training school authorities.

sufficient weight to conduct the evening classes, and the head teacher dislikes to be absent from afternoon school. Again, in some instances the assistants neglect to pursue any one particular study, or even to keep up the knowledge previously acquired; and I have found them unprepared for the examination, which it is necessary they shall pass as a condition of receiving their annual stipend. Every school department numerously attended requires the care of more than one adult teacher; but assistants fresh from apprenticeship seem unequal to the satisfactory discharge of all the duties expected of them. Perhaps, hereafter, when the training schools have met the more urgent demands for principal teachers, your Lordships may see fit to offer to young certified teachers pecuniary inducements to pass their probationary years as assistants in the larger schools. I think such a measure would be calculated to confer benefit upon the probationers themselves, as well as on the schools in which they were employed.

I beg leave to introduce here, as in former years,—

Apprentices. A List of Apprentices who completed their Service with credit, between 30 September 1855 and 1 October 1856, showing their Schools, Names, and present Position.

School.	Name.	Employment.
	MALES.	
Aberdeen - -	G. Riach -	Queen's Scholar.
Edinburgh, St. Andrew's -	J. M'Loughlin -	Queen's Scholar.
Lancaster - -	W. P. Robinson	Queen's Scholar.
Liverpool, St. Oswald's -	W. Heyes -	Trade.
„ St. Thomas' and St. William's.	M. M'Garigle -	Assistant in same school.
„ „ -	M. Pelham.	——
„ „ -	P. J. Quinn -	Assistant in Liverpool.
Manchester, St. Chad's -	J. Hagan -	Assistant in Wigan.
Newcastle, St. Andrew's -	J. Murphy -	Assistant in Chorley.
„ „ -	P. Boyle -	Student.
North Shields - -	M. Bourke.	——
„ - -	W. Moore -	Queen's Scholar.
Preston, St. Wilfrid's -	J. Swift.	——
„ „ -	J. Doyle -	Assistant in Preston.
„ „ -	W. Costello -	Queen's Scholar.
	FEMALES.	
Bolton-le-Moor - -	M. M'Carthy -	Queen's Scholar.
Edinburgh, St. Catherine's	C. M'Garvie -	Queen's Scholar.
Glasgow, St. Mary's -	M. Dougherty.	——
„ „ -	M. Leslie.	——
Hurst Green - -	M. Coats -	Queen's Scholar.
Ince Blundell - -	M. Woods -	Queen's Scholar, ill.
Lancaster - -	M. Gardiner.	——
Liverpool, St. Anthony's -	A. Keating -	Queen's Scholar.
„ „ -	R. Donnegan.	——
„ „ -	E. Murphy -	Teacher at Talacre.
„ „ -	C. Kirby -	Teacher at Gillmoss.
„ „ -	M. Keating -	Student.
„ St. Mary's -	M. Mahon -	Ill.

School.	Name.	Employment.
Liverpool, St. Oswald's -	M. Byrne -	Queen's Scholar.
„ St. Thomas's -	A. Atherton -	Queen's Scholar.
„ „ -	C. Warner -	Queen's Scholar.
„ St. Thomas' and St. William's.	M. Carter -	Queen's Scholar.
„ „ -	E. Blackburn.	——
„ „ -	L. Eaton -	Student.
„ „ -	E. Spencer -	Assistant at St. Helen's.
Manchester, St. Patrick's -	E. Hayhurst -	Queen's Scholar.
„ „ -	M. Tivnan -	Queen's Scholar.
„ „ -	E. Smart -	Queen's Scholar.
„ „ -	M. Martin.	——
Preston, St. Ignatius' -	E. Newsham -	Queen's Scholar.
„ St. Wilfrid's -	J. Parkinson -	Queen's Scholar.
„ „ -	M. Park. -	——
Talacre - - -	M. Anderson -	Queen's Scholar.

The number and standing of apprentices still in service are as follows:—

Years.	Boys.	Girls.	Total.
Fifth Year -	15	29	44
Fourth „ -	17	23	40
Third „ -	27	55	82
Second „ -	31	61	92
First „ -	37	74	111
Total -	127	242	369

It will be observed that the numbers increase annually, and that 111 pupil-teachers have been newly admitted to apprenticeship during the past year. They were selected, after examination, from 226 candidates, and prove that the pupil-teacher system gets to be more highly prized as it becomes better known. In the Appendix (*Appendix* B.) to this Report will be found a list containing such particulars as I have been able to collect regarding every one of the apprentices who have completed their term in this district.

New school premises.

New school premises of excellent character have been erected at Manchester, St. Augustine's; Chorley; Burnley (for boys), and Rainhill (for girls): but the noblest effort in this direction has been made at Glasgow, where the new schools of St. Andrew, St. Patrick, and St. Mungo (for boys), surpass all previous attempts exhibited in Scotland. Schools deserving high commendation are also in a forward state at Newcastle, St. Mary's; Birkenhead; Wigan, St. Patrick's; Talacre; and new premises are contemplated in several other places.

Classification of school premises.

The judgment of an inspector upon visiting a school must necessarily be modified by a variety of considerations which disarrange the standard he would desire to follow, and introduce some confusion into his reports. In drawing up the

following table, I have set aside such modifications, and compared the school buildings of my district one with another, without reference to wealth or poverty, greater or less exertions, and the like local accidents. The institutions which combine tasteful and substantial exteriors, with good furniture, suitable accessories, and advantageous sites, I have classed as *excellent.* Such as fall in any particular below the standard of this class, though possessing on the whole superior merit, are entered as *good.* Useful buildings, without features of special excellence, are ranked as *fair;* such as require improvement, as *moderate;* while those which are provisional and unsuitable, appear as *bad.* Since my last visits to many schools a considerable period has elapsed, and in several cases it may be hoped that the interval has wrought beneficial changes. All that it is possible for me to do is to refer to them as found when last visited, and to note such as are known to me as about to be superseded by new buildings or to receive material improvements.

CLASSIFICATION of SCHOOL BUILDINGS.

EXCELLENT.	GOOD.	FAIR.	MODERATE.	BAD.

[a] For the places marked (a), excellent buildings are in process of erection.

[b] For the places marked (b), new buildings are designed.

To classify schools in regard of discipline and instruction according to the results exhibited at the latest examination would be ungenerous and discouraging. Great satisfaction may reasonably be felt in the contemplation of a department, either newly formed or emerging from difficulties, where spirited exertions have been displayed, even though the highest standard cannot at once be attained; and I am cheered by the conviction that many departments are thus rising to the point of merit which will hereafter entitle them to be classed with those of the first excellence. Meantime, it is due to efforts already crowned with success, that their merits should not be concealed; and I now present a list, arranged in two classes, of the departments which I consider most remarkable for discipline and instruction. Distinguished schools.

List of Departments conspicuous for Excellence in Discipline and Instruction.

Boys.	Girls.	Infants.	Mixed.
	FIRST CLASS.		
Edinburgh— St. Andrew's. Liverpool— St. Francis'.	Edinburgh— St. Mary's. Liverpool— St. Anne's. St. Francis'. St. Mary's. St. Nicholas'. St. Peter's. St. Thomas'. Wigan— St. John's.	Edinburgh— St. Mary's. Liverpool— St. Anne's. St. Nicholas'. St. Thomas'. Preston— St. Ignatius'. Towneley.	
	SECOND CLASS.		
Ashton in Makerfield. Carlisle. Durham. Edinburgh— St. Patrick's. Lancaster. Liscard. Preston— Walker Street. St. Helen's. Stockport.	Ashton in Makerfield. Edinburgh— St. Catherine's. Glasgow— St. John's. Lancaster. Manchester— St. Wilfrid's. Preston— St. Augustine'. St. Ignatius's. Talacre. Wigan— St. Joseph's.	Edinburgh— St. Catherine's. Lancaster. Newcastle. Burnley. Manchester— St. Patrick's.	Accrington. Beauley. Clitheroe. Darlington. Falkirk.

Discipline.

Were it necessary or desirable to establish one general measure of the merits of schools, for my own part I should not hesitate to select discipline. It is discipline which lays the groundwork of that moral character which Christian education aims at producing, and without which intellectual culture will, too probably, prove pernicious. The admirable discipline in the schools which I have named forms one of their characteristic features, and serves to account for their general success.

There are, however, other institutions in which the primary importance of discipline does not appear to be understood, and where the consequence of the error is seen in lost labour and imperfect results. In some large schools indeed, and the remark applies particularly to the boys' departments, the number of scholars is so disproportionate to the adult teaching force, that without some sacrifice of the instruction, discipline cannot possibly be established. The best remedy here would be found in the engagement of a second master, an arrangement which the capitation grant will now render possible. But in any case, the first attention of the principal master ought unquestionably to be bestowed upon the discipline. His exertions will at a subsequent period be surely rewarded by real and rapid progress in the instruction.

Instruction. Such general remarks as I have to offer upon the state of instruction in schools will be very brief. Simultaneous reading, more common than formerly, shortens the process of learning to read, and produces in good schools a commendable correctness, which in a few cases rises into elegance. In writing, the angular hand is giving way to a rounder character, with letters distinctly formed. In all good schools, writing from dictation on slates is sedulously practised, and carried to considerable perfection; but I am of opinion that writing from dictation upon paper is neither so general nor so well done as I hope to find it in future years. In schools of the first class, for girls as well as for boys, no subject is better taught than arithmetic, and the intelligent methods adopted from the continent are mostly followed. Tate, and Cornwell and Fitch, seem to be the favourite authors. In grammar, I notice, with pleasure, a marked improvement in the schools where Mr. Morell's books have been introduced; and I hope that the action of the training colleges will gradually produce some solidity and uniformity in a subject which too often seems as perplexing to the teacher as it is uninviting and unintelligible to the scholars. Geography and history are better illustrated and more correctly taught.

Books. The enlarged list of school books offered at reduced prices, and the arrangements for its annual revision and improvement confer a valuable boon upon schools. The list now, for the first time, comprises some school books by Roman Catholic authors, and advantage of it should be freely taken. Recommendations which I am in the habit of making, that children should be encouraged to purchase books for themselves at the reduced rates, are sometimes met with statements but too well founded, that the children have no suitable homes for preserving or employing books. The attempt, however, to introduce the idea of neatness and care into their homes, such as they are,

would be worth a trial, and perhaps might go some little way towards the correction of a most serious social evil.

Capitation grant.

The capitation grant, now happily extended to all schools in England and Wales, will render it less difficult for managers to supply books and other school requisites in liberal measure. But I would suggest that the increase of the teaching power, wherever it may be necessary, should be the first point to receive attention. Large schools of 200 boys should no longer be left to one master, nor should the infants' school continue in charge of the girls' mistress. Valuable and efficient as pupil-teachers generally prove themselves, they cannot be accepted as substitutes for adult teachers, of whom one at least should be employed in every room. The schools which I visit in Scotland remain excluded from capitation grants.

Drawing cannot make satisfactory progress until taught by the schoolmaster or mistress.

Registers.

Martin's registers are coming into general use, and meet with approval. It seems, however, to be considered by teachers, whose judgment is entitled to respect, that the class-rolls of the set might be made of greater practical utility by provision for a larger number of names and by the addition of columns for age and residence. In support of these views, it is urged that in numerously attended schools the number of children in a division, (and the allowance of one apprentice to forty scholars in average attendance, is taken to show that a division cannot be calculated at less than fifty on the books,) exceeds the number of lines upon one page of the class-rolls, and that to take a second page, either in the same or in another roll, creates much needless trouble both in marking attendance and in calculating averages. It is said besides that the duty of the class teacher to inquire for absentees cannot be performed without ready and accurate acquaintance with every child's residence, and that reference to the admission book would under any circumstances be tedious, and is found in most cases to be illusory, as changes in residence so frequently take place. A pencil entry in a special column of the class roll is recommended. With regard to age, it is alleged that this particular point would be profitably kept under the eye of the class teacher, and also that the annual returns required by your Lordships would be more accurately, because less laboriously made, were the head teachers delivered from a search through several years' entries in the admission book, and from a multitude of small calculations in getting at the ages of the children still on the books. I suppose that a column in the class-roll to show the time at school would be of equal utility. The more strictly attention to registration is enforced, the more readily will, I am sure, consideration be

given to practical suggestions designed to make the obligation less onerous or more effectual in its performance.

Night schools.

Advantage of your Lordships' readiness to aid night schools has been taken at Galashiels; Glasgow, St. Mary's, and St. Mungo's; Newcastle; Preston, St. Ignatius', St. Wilfrid's, and the Talbot; Stockport; and Wigan, St. Mary's. In all these cases the night schools are designed to impart the rudiments of secular and religious learning to young persons employed during the day in manual labour, and they produce very satisfactory results. A single evening class has been started with the higher aim of teaching the elements of science and languages to young men of larger resources; but the limited success attending it has not encouraged the promoters to continue an outlay necessarily considerable.

Industrial schools.

In former reports I have described the industrial schools at Newcastle; Liverpool, St. Thomas'; the Liverpool Lace School; and Manchester, St. Patrick's, which continue their useful course, but have received no new accessions in the past year. The provisions of the Reformatory Minute would be applicable in Liverpool, Newcastle, Edinburgh, Aberdeen, Hartlepool, and the like places, to large numbers of Roman Catholic children who, in the absence of institutions now so liberally aided, where they would be fed, taught, and trained to honest labour, are but too likely to recruit the ranks of beggary and crime; and, in the interest of society as well as of individuals, the establishment of schools specially designed to meet their deplorable circumstances may justly be considered to deserve generous encouragement. I hope in future years to have to record the success of new efforts in this direction.

I have the honor to be, &c.

SCOTT NASMYTH STOKES.

To the Right Honorable
The Lords of the Committee of Council on Education.

Appendix B.

List of Pupil-teachers who have completed their Apprenticeship with credit in Mr. S. N. Stokes' District, showing their Schools, Names, and present Employment, completed to October 1856.

School.	Name.	Employment.
	MALES.	
Aberdeen - - -	G. Riach -	Queen's Scholar at St. Mary's.
Bolton - - -	M. Dawson -	Certified trained teacher in Bolton.
,, - - -	W. Finnigan -	Ditto, in Durham.
,, - - -	H. Davis -	Surveyor.
Blackburn, St. Alban's -	J. Clarke -	Queen's Scholar at St. Mary's.
,, ,, -	D. Fitzgerald -	In bad health.
,, ,, -	J. Winder -	In cotton mill.
Dumfries - - -	J. Cavan -	Baker.
Durham - - -	T. Bolmer -	Untrained teacher in Thurnham.
Edinburgh, St. Andrew's -	D. M'Carron -	Certified teacher in Carlisle.
,, ,, -	N. M'Dermott -	Architect.
,, ,, -	T. Barnes -	Queen's Scholar of second year.
,, ,, -	J. M. Chisholm	Ditto - ditto.
,, ,, -	J. Smith -	Deceased.
,, ,, -	J. M'Laughlin -	Queen's Scholar at St. Mary's.
,, St. Patrick's -	J. M'Nally -	Student at St. Mary's.
,, ,, -	J. Barker -	Pawnbroker.
Lancaster - -	W. P. Robinson	Queen's Scholar at St. Mary's.
Garstang - - -	G. Grayston -	Assistant in Preston.
Leith - - -	J. M'Affrey -	Queen's Scholar.
,, - - -	J. Nevin -	In the Excise.
,, - - -	O. Fairley -	Railway clerk.
Liverpool, St. Oswald's -	W. Heyes -	In business.
,, St. Thomas' and St. William's.	M. M'Garigle -	Assistant in Liverpool.
,, ,, -	M. Pelham.	——
,, ,, -	P. J. Quinn -	Assistant in Liverpool.
Manchester, St. Chad's -	J. Goulden -	In business.
,, ,, -	J. M'Dowell -	At college in Belgium.
,, ,, -	J. Hagan -	Assistant in Wigan.
Newcastle, St. Andrew's -	J. Curran -	Student at St. Mary's.
,, ,, -	J. Murphy -	Assistant in Chorley.
,, ,, -	P. Boyle -	Student at St. Mary's.
North Shields - - -	M. Bourke.	——
,, - -	W. Moore -	Queen's Scholar at St. Mary's.
Preston, St. Wilfrid's -	J. Swift.	——
,, ,, -	J. Doyle -	Assistant in Preston.
,, ,, -	W. Costello -	Queen Scholar at St. Mary's.
Stockport - - -	M. Stafford -	Untrained teacher in Kendal.
,, - - -	A. J. Marsden -	Certified trained teacher in Hartlepool.
Sunderland - -	B. Scanlan -	With Sappers and Miners.

ANALYSIS.

Of 40 Male Apprentices who have completed their service in 18 schools, there are now engaged in teaching, viz.:—

Certified and other teachers	- - -	6
Queen's Scholars and other students	- -	12
Assistants - - - - - - -	-	6
		24
Deceased, or in bad health - - - -		2
Engaged otherwise than teaching - - -		14
Total - - -		40

GENERAL REPORT, *for the Year* 1856, *by Her Majesty's Inspector of Schools*, E. WOODFORD, Esq., LL.D., &c., *on the Schools in connexion with the* CHURCH OF SCOTLAND, *and other Schools inspected by him, and by Her Majesty's Assistant Inspector of Schools*, D. MIDDLETON, Esq., A.M., *in* SCOTLAND.

MY LORDS, 10 January 1857.

I HAVE the honor to submit my seventh General Report. It consists mainly of five sections, viz., I. Teaching; II. Operation of the Privy Council Minutes in certain districts; III. Training College; IV. General examination, and analysis of the papers revised; V. Pupil-Teachers.

I. TEACHING.

Chief defect in teaching.

From continued and careful observation I am convinced that the great *defect* in practical teaching consists in not procuring, so much as might be done, the attention of the whole class to each question, and the answer to it, and thereby securing the individual realization of the step made or the point gained. I have already animadverted on the simultaneous or spontaneous answering as fallacious in this respect, and desirable only as a variety, or for the needful reiteration of some fact to which individual attention has already been called. The usual course, in practising the individual method, is to question in turn from top to bottom, always beginning at the dux, and generally returning to him at any interruption; or, as a variety, to call on any individual, and *then* put a question to him. Now, neither of these plans will, in ordinary hands, steadily *constrain* the attention of more than the one who has to reply, and probably two or three below him, unless the competition for a good place in the class be greater than usual, a motive which is generally confined to the upper section, who are almost always too far in advance of the lower sections for the satisfactory working of the class as a whole.

Remedy suggested.

The mode which, from personal knowledge of its efficiency, I have recommended, as briefly noticed in a former report, and which I continue to illustrate as convenient occasions present themselves, is to address my question to the whole class, and after allowing them a moment's time to consider the answer, to fix upon one to give it, and if that one does not answer immediately, to call another. The question may be repeated before one is called upon to answer, but never after that, unless it appear that no one knows what it is,—a discovery which will sometimes be made on first trying the method, and

one which demonstrates the value of it. All the teachers who have fairly tried it are satisfied with the result. Some masters admit the efficiency of the method, but say that they have not time to act upon it. The Inspector, say they, may take what time he pleases in illustrating a method, but the teacher has a certain amount of work to do within a given time, and he must go over the ground. It is admitted that, unless the method gain time in the amount of the effect produced, it has no claim to preference in school practice. An opportunity occurred in one case for apparently settling this point; a master admitted that I carried the greater part, or, at least, more than the half of the class with me at every question, but said he put a good many more questions than I did in the time—"He would not say *two* for *one*," but agreed on *five* for *three*. He admitted farther that he might not carry with him more, on an average, than five of the class at each question. The premises were thus complete. Therefore, when he put five questions producing the desired effect upon five minds, the measure of his work was $5 \times 5 = 25$, and when I put three questions producing the desired effect upon, say, fifteen minds (the number in the class being thirty-one), the measure of the work done was $3 \times 15 = 45$ in the same time. I allowed the master to reconsider his admissions in the premises, but he adhered, and was content with the accuracy of the conclusion.

Remedy tested.

The great *error* in teaching consists in giving too much help to bring out the answer. This is done not merely by some in putting leading questions or plainly initiating the answer, but by all that I have heard, in at once expressing assent or dissent, even in cases where there are only two or at most three answers that can be given; as *nominative* or *objective*, *singular* or *plural*, *masculine*, *feminine* or *neuter*, &c., and similarly in many other subjects. A boy may say *nominative*, and be right by chance, and the master says "very well," when perhaps neither that boy nor any other in the class had any clear, or confident knowledge of the fact, or the boy may call it the *objective*, which being refused, the same boy says *nominative* (of course), or another may be put above him for saying so, while neither he nor any other knew anything about it except that the master refused the one, and, therefore, the other was given. The method which I have recommended in such a case, and even generally, is when an answer has been given by one, to ask another whether he be right, and the master may divide the class upon it, or elicit a variety of opinions or guesses, when there is room for variety, without general confidence in any of them. When a class can be thus wholly at fault, it is good to know the fact, and they are then in the

Chief error in teaching.

Remedy.

best possible condition to appreciate the explanation, to remember it, and to apply it in similar cases. And so far from considering the time so employed to be lost, I do not think that, within the whole time allowed for the subject, it could be better employed—assuming that the question is not a very ill chosen one. Of the imperfections in teaching, which are not immediately reducible to one or other of the above heads, I may mention chiefly the following:—

Other imperfections.

1. There is less effort than I think might be successfully put forth in dealing with the local faults in pronunciation. These are in some places very great, general, and deep-rooted, and in every way discouraging to the teacher. Still it is obvious that, in every case, they are reducible to a few great heads, and that a short column of familiar words, and a few simple expressions, might be selected to represent the whole, and being carefully and repeatedly pronounced every morning, or as occasion may suggest, would serve as a key for reference in correcting the reading of the daily lesson. Such a key should be hung up in large letters; and the frequent recurrence of the same error thus rendered so palpable could not fail to constrain attention.

2. The explanatory methods continue to be less steadily employed than the teachers themselves usually admit to be desirable. The reason commonly assigned, want of time, must, under the admission, be a fallacy.

3. Grammar, in the great majority of cases, continues to be taught as a thing apart from the meaning in detail of the passage read. Those who have tried the improvements in this respect that have been suggested, express themselves as greatly satisfied with the result, especially with that of parsing in the order of construction.

Irregular attendance.

Among the chief discouragements that teachers have to complain of professionally is the very limited and irregular attendance of the children during the year,—an evil, it would appear, of much greater magnitude than I had at first supposed. In some localities there is almost an entirely distinct set of children for summer and for winter. Around the coast and among the islands, the great fishing seasons, in addition to those of field work, occasion constantly recurring interruptions. Among the very poor classes in large towns, where the weekly payment system is adopted, the slightest temptation, in the way of half a day's employment for the children, is deemed a sufficient reason for absence; and, if this happens in the beginning of the week, the absence is usually continued till next week, because the same payment would have to be made (frequently no more than a *penny*) for the remaining five days as for the whole six. From various causes, which I have previously

reported, the children in rural districts are very long in being re-assembled from harvest vacation, often not till the beginning of December, and sometimes not till after Christmas, so that, as many of them leave school again in May, their attendance does not exceed one third of the year, and even during this time it is liable to irregularity from the state of the weather. In short, in seed time, in the time for cleaning turnips or hoeing potatoes, in the herring fishing season, in harvest, and in the time of potatoe lifting, I am reminded of the unreasonableness of expecting anything like an ordinary full attendance, and in winter I have been asked how I could expect children to come from a distance in such weather. The first step towards diminishing the extent of this evil will be the rigid exactness of the teachers in registering the daily attendance, or preferably the *absence*, of those who, being on the roll of scholars, should attend. The register, with a summary of the findings, should be exhibited, not only to the Inspector, who is required to see it, but to the local authorities, on examination days and other occasions of meeting, in order that they may be made more fully aware of the real state of things, and be ready to remonstrate with parents, as occasion presents itself, either in their public or private capacities. Prizes for regularity of attendance would not be without their influence; and, above all, the extension of the Capitation Grant to Scotland would have a most beneficial and immediate effect. Remedy.

II. Operation of Privy Council Minutes in certain Districts.

The operation of the Minutes of 1846–7, which, from being at that date an experiment, has now become matter of ten years' satisfactory experience, is still frequently spoken of as liable to the very serious objection that the benefit is not extended to places where aid is most required, namely, those in which the people are so poor as not to be able to meet the pecuniary conditions of a grant, either for the erection of school premises, or for the annual augmentation of the teacher's salary. This is undoubtedly an evil; but, however it may be remedied, it might prove to be, in the main, even a greater evil to abandon the condition of a local contribution; for it is not the sole, nor, as I believe, the chief advantage of local contributions, that they go to double the amount of the grant for the promotion of education in the place, an object that could be effected perhaps more equably by doubling the amount of the public grant. The great benefit of the local contribution is that it elicits and maintains an interest in the school which Local contributions.

would not otherwise exist. The contributors are concerned for the success of that to which they contribute, and upon this success depends the grant which it is their object to secure. The competition between their school and another, in numbers or in reputation, seems to concern themselves. The master feels that he is supported by the sympathy of friends; but he must feel also that the faithful and diligent discharge of duty is an indispensable condition of their active support and ready countenance. On the other hand, if the expense were defrayed wholly by Government, or partly by Government and partly by local, but legal and involuntary, assessment, the local interest in the school would be comparatively small, unless when parties might believe that they had just ground of complaint against the conduct of the teacher; nor is it likely that any set of local managers would bestow, as a public duty, that attention to the school which is readily and spontaneously paid on the present footing. The example of the local boards supplied by the Church over all the country affords no ground of exception to the remark. From the first dawn of the Reformation, the National Church has regarded the education of the young as a primary object, both for its own sake and as the best and most permanent means of supporting religious and Protestant principles. The schools, too, of which she procured the establishment in every parish, with the right of presbyterial examination, were, as they still are, in these respects, her own. Regularly educated themselves, while not a few of them have been ordinary teachers, and all of them are trained to the highest function of instruction, they could not but feel a special interest as well as a strong sense of duty in their supervision of the schools. If these motives have not been equally powerful at all times, they have never entirely ceased to act, either in the Established Church, where they originated, or, more or less, in any of the bodies that have seceded from her. Laymen take at present great interest in the schools, partly no doubt because of the many educational questions that have been raised, and have become, in fact, the great questions of the day. If these were disposed of, and if matters had settled down into more or less of a quiet routine, as formerly, though it may be an improved one, the lay interest in the schools would subside comparatively, or entirely give place to some other political or party object of the day, unless kept alive by some such stimulus as the voluntary contribution maintains. But the question then recurs,—how are these localities to be provided for that cannot raise the required amount of voluntary contribution? My plan would be, not to dispense with a voluntary contribution, but, to reduce the proportional amount of it, in any clearly definable class of cases, such as the islands,

Local interest.

Church agency.

Lay interest.

and I may instance those of Orkney and Shetland, more particularly the latter, in which I spent some time last summer. Islands.

The inhabitants of Shetland may be divided into, *first*, the proprietors, of whom very few are wealthy, and many may be very much the reverse; *second*, the clergy, whose incomes are small (though here the church may be maintained at a greater proportion of the rental than in any other part of the British dominions); *third*, the merchants, who are not many, but who, from various causes, seem to be the only thriving class; and, *fourth*, the fishermen, who are all poor. Farming, beyond the crofts cultivated by the fishermen, can, with a few exceptions, hardly be said to exist. The landward portions of the islands are mostly moor and peat moss, and it is chiefly the sloping borders around the *voes*, or narrow indentations of the sea, that are cultivated and inhabited. The population, accordingly, are neither assembled in towns or villages (Lerwick being the only exception), nor scattered over the country generally, but may be described as inhabiting, in a straggling manner, different portions of the island, of some of which, if the houses were concentrated, they would constitute small villages. Hence, to supply them adequately with the means of education, two or more schools would often be required where, in other circumstances, one would suffice. The ecclesiastical and educational burdens may, I believe, be reckoned together as at least triple the amount, in proportion to the rental, that they are in an ordinary agricultural parish on the mainland. Some of the other burdens press with great weight upon the comparatively small number amongst whom they fall to be divided, more especially the new Poor Law Amendment Act. In one parish the means and substance alternative of it was tried, and the minister was thereby assessed at 40*l.* out of a stipend of 150*l.*, and another minister at 30*l.* out of 112*l.* One proprietor told me that if, in addition to the pressure of recent burdens, I came round under the proposed new Act (the Lord Advocate's late Bill) to say that one new school is required here, and another there, as might be the case, to order buildings of the required dimensions, and salaries of increased amount for them all, and pensions for those of the present masters whom I might deem inefficient, it would be an act of comparative kindness to confiscate the whole property and give a small retiring allowance to the present holders of it. Now, instead of exacting in such circumstances one half of the costs of building, I would propose one third, at most, and instead of requiring the annual local income between fees and voluntary contribution to be double that of the grant, I would propose that it should not be necessarily more than equal to it. One half of this moiety would always be voluntary contribution, as Shetland. Burdens.

the fees are small even nominally, and are seldom well paid. I am quite sensible that, in some instances, it might be impossible to meet, locally, even these modified conditions, but, to those so circumstanced, aid might be allowed from any general contribution that might, and probably would, be raised for the purpose. Thus we should have, even in the poorest of cases, a voluntary contribution, partly direct in money, and partly in the exertion put forth to procure the necessary aid.

State of education.

Education in most of the schools that I visited may be described as generally of a very elementary kind, but not of inferior quality so far as it professes to go. Arithmetic is rarely far advanced. Grammar is still farther behind, and confined, as usual, to a much smaller proportion of the children. The reading is often good, with the exception of a peculiar rising inflection at the end of the sentence. Geography seems to be in many instances a favourite study, perhaps from the circumstance that many of the people go as sailors to foreign parts. The questions in the catechism were often well answered as in the book, though the analysis of one was rarely attempted. The children have a lively and intelligent look, though their amount of knowledge is very limited, and they have a general politeness of bearing and address, which seems common to all these islanders, while accompanied in many respects with great simplicity as to knowledge of the world.

Conduct of one school.

I promised to report specially the conduct of the children in one school. I had inspected two schools, and reached the place of a third shortly after it was dismissed, and meeting a considerable party of the children, I asked them if they would willingly go back for an hour or so. They seemed not reluctant, and told me that the rest had gone in a body, like themselves, in the opposite direction. I got the master to go after them. Nearly the whole scholars reassembled in about fifteen minutes, and resumed their books with an alacrity that I never before witnessed, after they had been closed for the day. After rather more than two hours work, and when it was about eight o'clock, I commended their good spirit, and said they had had enough of schooling for one day, when a class to whom the stating of a question had been explained, and the principle illustrated, stood forward with slate advanced and pencil in hand, saying, "*Please, Sir, another chance in Proportion.*" I could not help at the moment condemning any regulation that would exclude such a school from the benefit of a grant, which many others less deserving could easily obtain, just because their supporters happened to be less needy. I do, my Lords, most respectfully submit that some such modification as I have ventured to suggest would remove almost entirely the only objection to the operation of

the Minutes, without altering the great principle of the grant, while, without causing a greater annual outlay of the public money *per school*, it would confer on these islands an inestimably great boon, which it seems in vain to look for from any other source, or in any other way.

III. Training College.

Improved accommodation in training college.

Since my last report the number of the class-rooms for the reception of students in the Edinburgh Normal College has been greatly augmented. There are now no resident students, and the dormitories have been thrown into large, well lighted, and well ventilated rooms, and commodiously fitted with parallel desks rising in the form of a gallery. The apparatus and physical science lecture room is, in every respect, a better one The plan of the improvements, altogether, is excellent, and seems to embrace the most that can be made of the building and the site, and no pains appear to have been spared in the execution of it. The rooms for female students are entirely separated from those for the male.

Increased attendance.

There have entered this year 64 male students, of whom 30 are in the second year; and 76 females, of whom 19 are in the second year, in all 140, constituting, I believe, the largest attendance at any of the training colleges under inspection. Of the male students, 50 (nearly four-fifths) are Queen's scholars, and of the female students, 27, or more than one-third.

The rector has established exemplary order and regularity, which he maintains apparently without an effort. His lectures unfold clear views of the first principles, from which the best methods of teaching are deducible, or into which they are resolvable.

Practising school.

Owing to the limited accommodation for the model or practising school, it is too small to afford sufficient practice for so many students. It is attended at present by 237 girls and 205 boys, in all, 442. The school continues to be well worked, notwithstanding that the teachers in it have to take part in the instruction of the college students, and that during school hours; and this cannot but be a disadvantage, however meritorious may be the conduct of the pupil-teachers in charge during their absence. It is also to be regretted that the methods illustrated in the model school, though excellent in themselves, are not those described and recommended in the lectures of the rector.

I understand it is intended, by next session, to accommodate the staff of the training school, and other general arrangements, to the increased attendance of the students; and thus some of the inconveniences referred to will be removed.

IV. General Examinations for Certificates of Merit.

Certificates of merit.

As the examination for certificate of merit is now optional to teachers who are to be intrusted with the training of pupil-teachers, instead of that for registration merely as qualified for this charge, and as from other causes also a considerably greater number of teachers may have to attend these examinations than formerly, questions are frequently addressed to me as to the nature of the examination, obviously in the desire to ascertain the probable line of separation between success and failure, to which the mere transmission of the broadsheet and the syllabus of Professor Moseley do not afford satisfactory answers; and it seems a fitting time to speak of the papers that have lately passed through my hands a good deal more in detail than I have hitherto done. As the Inspectors do not now report on the whole series of papers worked by the candidates that are examined before them, but are entrusted each with those on so many subjects of all the examinations that are held simultaneously, and for which the exercises are, therefore, the same, while they are, on the one hand, less enabled, so far as the examination goes, to form, from personal knowledge, an accurate estimate of the attainments as a whole, of those whom they are most likely to be called upon to recommend as teachers, they have, on the other hand, a more enlarged view of the progress made and making in the several subjects as they come round, and in the different training colleges comparatively. Of the papers worked in June last at the four Presbyterian training colleges, those entrusted to me for revision were Latin prose, Latin verse, and geography, for male students of the second year; arithmetic and school management, for male students of the first year; Holy Scripture for female students of the first and second years; and Gaelic for male and female students in the first and second years. On each of these papers I shall proceed now to give the proposed account in detail; and that which seems to call for the greatest particularity is the one on arithmetic. In comparing the numbers that succeed or fail in every question, with the number of candidates that sit down to work it, it has to be borne in mind that the candidates are allowed to work only one question in each section, and have the option as to which in every succeeding section.

ARITHMETIC.—Males, 1st Year.

This was worked by 162 Candidates.

Section I.

Question 1.—*Explain the process of borrowing in Subtraction.*

Of the answers to this question, 3 were very good, 6 good, 8 very fair, 2 fair, 6 moderate, 3 very moderate.

More than one half of those who took it adhered to the old method, which requires the knowledge at this stage, that if the same number be added to the minuend and subtrahend the remainder will be the same. None of them, however, employ such an example as 10000—3654.

Question 2.— *Show how to find the area of a rectangle, the sides of which are* (1) 4 *feet by* 7 *feet;* (2) 4 *feet* 6 *inches by* 5 *feet, illustrating your example by figures.*

Of the answers to this question, 6 were very good, 11 good, 25 very fair 23 fair, 15 pretty fair, 8 moderate, 5 very moderate.

The question is thus well answered by less than one in six of those that attempted it. Not unfrequently the mere rule is given without any explanation: in many instances we find such expressions as "feet multiplied by feet gives feet; "4 feet 6 in. × 5 feet = 22 feet 6 inches." Most of the errors occur in the process of duodecimal multiplication.

Question 3.—*Explain how, in the common system of notation, ten digits are necessary and sufficient for expressing every possible number.*

Of the answers to this question, 4 are very good, 13 good, 15 very fair, 2 fair, 3 pretty fair.

It is, on the whole, very fairly answered; systems of notation seem to be well understood; the answers exhibit an acquaintance with the history and principles of numeration. There appears, however, to have been a tendency, in many cases, to avoid a direct answer to the question.

Section II.

Question 1.—*If* 1 *lb. avoirdupois be equivalent to* 7,000 *grs. troy, and* 1,869 *sovereigns weigh* 40 *lbs. troy, how many sovereigns will weigh an oz. avoirdupois.*

3 right, 3 partly right, 11 wrong.

This question, when done by proportion, is generally wrong in the stating. In most cases the error arises from confounding troy with avoirdupois weight.

Question 2.—*Extract the square root of* 5499025*; and obtain from the process the square of* 234.—Ans. 2345.

6 correct, 26 incomplete, 2 wrong.

The square root is correctly extracted by all except two; but the second part of the question, simple as it is, is done by only six.

Question 3.—*Multiply* $\frac{2\frac{1}{3}}{3\frac{1}{2}}$ *by* $\frac{21}{11}$ *and* $1\frac{2}{7}$ *by* $.1\dot{5}$*; and divide* $\cdot 85$ *by* $\frac{51}{22}$ *and* $23\cdot8$ *by* $\cdot 017$.

47 right, 56 incomplete, 4 wrong.

In the vulgar fractions $\frac{7}{7}=0$ occurs several times; but the answers to the decimal part of the question especially are defective. A great many err in the placing of the point in the second question in division, and the knowledge of interminates seems to be very superficial.

Section III.

Question 1.—*Find by Practice the price of* 22 *stone* 10 *lbs.* 11 *oz. at* 3*l.* 15*s.* 10½*d. per stone.*

10 right, 21 partly right, 3 wrong.

Question 2.—64 *gal.* 1 *qt.* 1¼ *pt. at* 1*l.* 7*s.* 8½*d. per gall.*

11 right, 13 partly right, 3 wrong.

Question 3.—36 *yds.* 6 *ft.* 125 *in. at* 1*l.* 4*s.* 1½*d. per sq. ft.*

34 right, 31 partly right, 21 wrong.

These questions, are, in many cases, not done by Practice, as required.

The fractional parts of farthings are very seldom eliminated.

A very common error in the third question, arising from not carefully observing the terms of it, is to reckon the value at 24*s.* 1½*d.* per *sq. yd.*, instead of per *sq. ft.*

Section IV.

Question 1.—*A grocer buys* 2 *cwt. of sugar at* 6*d. per lb., and* 4 *cwt. at* 4½*d., and sells* 3 *cwt. at* 5½*d. per lb.; at what rate must he sell the remainder so as neither to gain nor to lose on the whole?*

12 right, 3 partly right, 6 wrong.

The errors in this question arose chiefly from attempts to work it according to same particular rule, compound proportion, for example. Some made out the answer to be a number of shillings or even pounds.

Question 2.—*A person buys two kinds of tea at* 4*s. and* 6*s. per lb.; in what proportion must he mix them so that by selling at* 5*s.* 3*d. per lb. he may gain* 20 *per cent. on each pound sold?*

Attempted by three, of whom two were partly right, and one wrong.

The errors were occasioned by a want of careful consideration of the terms of the question.

Question 3.— *If seven masons can erect a certain wall in* $20\frac{5}{8}$ *days of* $9\frac{3}{6}$ *hours each, how long would it take* 3 *men to do* $2\frac{3}{4}$ *of the same work, reckoning* 8 *hours to the day?*

69 right, 18 partly right, 39 wrong.

Mistakes occur chiefly from not distinguishing direct from indirect proportion: many state that $2\frac{3}{4}$ of the work can be done in less time than (once) the work, &c. Almost always, when bringing the answer to hours, it is forgotten that only 8 hours are to be reckoned to the day.

Section V.

Question 1.—*Find the price of* 12,345 *lbs. at* 5*l.* 4 *florins* 3 *mils per* 1,000 *lbs.*

16 right, 21 partly right, 22 wrong.

Many put mils in the *second* place, omitting cents., an error which a consideration of the meaning of the term, and a very slight knowledge of decimals, would have prevented.

Question 2.—*Find the sum which must be invested in the three per cent. consols at* 92 *to produce an annual income of* 254*l.* 2 *florins* 5 *cents.*

7 right, 8 partly right, 4 wrong.

Errors arise from want of knowledge of the principles of stocks, but more especially from ignorance of decimal fractions.

Question 3. — *Find the cost of insuring* 5,900*l. the premium being* 3*l.* 5 *florins, the commission* 1 *florin* 2 *cents* 3 *mils, and the duty* 7 *cents* 5 *mils per cent.*

41 right, 8 partly right, 8 wrong.

The few that have failed in this question did so chiefly from error in the work rather than in the method. This section is not generally understood. The advantages of employing decimal coinage are not perceived. Many reduce the given decimal money to £ *s. d.*, thereby greatly lengthening the process, and failing to illustrate the facilities afforded by the use of a decimal coinage. Others reduce the pounds, florins, &c. to mils by successive multiplication by 10.

Section VI.

Question 1. — *How many bricks will build a wall* 80 *feet long,* 6 *feet high, and* 2½ *bricks thick, at the rate of* 140 *bricks to the standard sq. yd.?*

6 right, 1 partly right, 5 wrong.

Errors from not bringing the work to standard measure.

Question 2. — *How many tiles will cover a roof* 35 *feet* 7 *inches in length, and* 15 *feet* 10 *inches in breadth, allowing* 450 *tiles to the rood of* 36 *sq. yds.; and what will they amount to at* 7*s. per* 100?

5 right, 3 partly right, 6 wrong.

Here the prevailing errors were in the duodecimal multiplication and the elimination of the fractions. There was some doubt as to the shape of the roof.

Question 3.—*A Turkey carpet, measuring* 11 *ft.* 6 *in. by* 9 *ft.* 8 *in., is laid down on a floor which is* 14 *ft. by* $12\frac{1}{2}$ *ft.; determine the quantity of floor-cloth necessary to complete the covering, and its price at* 6*s. per sq. yard.*

49 right, 44 partly right, 23 wrong.

There is a prevailing error in the square inches from ignorance of duodecimals; $\frac{10}{12}$ of a square foot is almost invariably set down as 10 sq. inches, leading to an error in the value. The price, moreover, is very often taken as 6*s.* per sq. foot. From the foregoing remarks it will be seen that the chief defects are in the explanation of principles (Section I.), in fractions (Sections II., III., V.), and in duodecimals (Section VI.) There is a marked deficiency in the power of intelligent and intelligible explanation; and it is noticeable that the simpler and more elementary the process for which reasons must be given, the greater is the want of success in giving them. This seems to be attributable, in a great measure, to the want of a constant recognition of the universal application of the principles of arithmetical notation in practical computation. To the same cause is owing the deficiency in fractions, and more especially in decimals. And it is noticeable that the same class of errors prevails in the exercises worked by the pupil-teachers. Duodecimal multiplication, as it is called, seems to be in general very imperfectly understood. Almost universally the phraseology of the older school books is retained. Very few clearly explain that the figure containing one foot by one inch is a rectangle one foot long and one inch broad, consisting of 12 square inches, and forming the twelfth part of a square foot. On a reference to the findings on the papers of last year I observe that the subjects here animadverted upon were those in which shortcomings were there also chiefly apparent.

SCHOOL MANAGEMENT.

The specimens of copy-setting contained in this paper are, generally, rather defectively executed. Attention is not paid to the turns and joinings, and there is a want of uniformity in height, slope, width, and thickness. The specimens of small-hand are characterized by the same faults. These defects evidently arise from the want of sufficient exercise in the elementary stages. A more general use of the blackboard in the teaching of writing would tend to correct the faults which are apparent in these specimens. I here beg leave to repeat a suggestion which I formerly made, viz., that it might be better to have the specimens of copy-setting not at the very commencement of the paper as hitherto. I have observed that the hand is more apt to be a little unsteady at that time than it would be after the paper is somewhat advanced. The paper on school management is on the whole satisfactorily worked. The answers written by the students show an extensive theoretical knowledge of the best methods of communicating instruction, while those of the teachers, in many instances, suggest adaptations of these to particular circumstances, together with many practical remarks indicating a substantial acquaintance with the principles of teaching.

Section I.—Reading.

The method of teaching reading generally preferred is that commonly called the mixed phonic or analytico-phonic method, which teaches the powers of the letters by analyzing a word into its component sounds, and thereby making the pupil familiar with the *powers* of the letters. Exceptional powers or sounds are gradually introduced and illustrated. The grounds upon which this method is preferred to the alphabetical, on the one hand, and the "look and say" method on the other, are that the sound of a word cannot be inferred from the *names* of the letters that composed it, and that, in the "look and say" method, the sound of a word cannot be known from its appearance without an analysis and synthesis of the powers of its component parts. The phonetic method, which, since the days of Bacon, has been struggling to gain admittance into our language, is advocated by not more than one or two. The great and fundamental error in our alphabetical system, and that which gives plausibility to the proposed phonetic system, is our unaccountable misnaming of the vowels. In all other languages the power and name of single vowels are substantially one and the same; we alone give a different name and sound, because the primary power is supposed to be different with us, while in reality, and as might have been expected, it is the same as in the languages from which ours is derived, and apparently in all others. Like every false principle, it is attended in effect with no good but much harm.

Section II.—Spelling.

1. Among the various methods of teaching spelling sufficient prominence is not given to that by dictation. As spelling is employed principally, if not exclusively, in writing, dictational exercises should form an important element in the business of the school-room.

2. The principal difficulties peculiar to English spelling are generally enumerated, with a few remarks upon their origin. Some good expedients for obviating them, by classification for example, and the use of slates and blackboard, are presented and illustrated by well selected examples.

3. As to the classification of the letters of the English alphabet, the answers are somewhat defective. Some separate them only into vowels and consonants; others classify them according to their formation, as from elementary lines and curves; and *dentals, labials, gutturals, &c.* are not clearly distinguished. With reference to the defects of the alphabet, there seems to be great difference of opinion as to the number of separate and distinct vowel sounds, a necessary or natural result of the fundamental error above mentioned; one answer estimates them as between 30 and 40. The effect of so called silent vowels is not appreciated; the sounds of *a, e, i, o,* in *mate, mete, mite, mote, moat,* and similar combinations, are almost always represented as single and simple. As to the redundancies of the alphabet, the answers are more full and explicit.

Section III.—Writing.

The answers to the questions in this section are, with few exceptions, less satisfactory than those to the other portions of the paper. The requisites of good writing are pointed out, but little said about the method of acquiring them. The faults into which the child, in his first lessons in penmanship, is apt to fall, are indicated, but without any well-defined means of correcting them. They are to be remedied, many of the answers say, "by great attention on the part of the teacher." This is true for writing as for every other subject. They should, however, have pointed out special expedients for correcting special errrors. The usual method is to set before the pupil a

copy or specimen which he must imitate as he best can. As soon as he knows what he has to write the copy is disregarded, and hence the first or second line is generally the best, because he then proceeds to fill up the prescribed number of lines from memory. Now there ought to be imparted to the pupil such a knowledge of the *principles* of writing, of the requisite proportions as to height, slope, width, &c., and especially of the method of executing turns and joinings, as will enable him not only to distinguish good writing from bad, but also to say with certainty in what particular element it is good, and in what bad. For this purpose two specimens of writing, the one good, and the other bad, may be written on the black-board, and the class made to compare the one with the other, or they may be made to turn up the best written page in their copy-books, and from that page to select the best line, to say whether it has any defects, and what requisite of good writing they violate. In the inspection of schools I illustrate this method, as often as time permits, in examining the copy-books.

Section IV.—Arithmetic.

In the answers on the method of teaching arithmetic, sufficient importance is not attached to the early introduction of concrete quantities. Since children employ only applied numbers, they should be made the foundation of instruction. The methods given of teaching notation are generally unsatisfactory.

RELIGIOUS KNOWLEDGE.

Females, 1st and 2nd years.

The prevailing defect in the answers to this paper is want of exactness. To remedy this I would suggest a more accurate study of the chronology and history of the Old Testament. The contents of the books of the minor prophets seem to be not generally known; and the connexion between the Old and New Testaments has not been studied. In New Testament history, there seems to have been no comparison made of the four Gospels, nor has the book of the Acts of the Apostles had its due share of attention. It would be of great advantage to connect the geography and history of Scripture localities.

GEOGRAPHY.—Males, 2nd year.

There is this year a decided improvement in map-drawing. The study of physical geography seems to be yearly gaining importance and attention. There is a considerable acquaintance with the commercial relations of different countries. The answers to the sixth section, however, on popular astronomy are by no means satisfactory.

1. The doctrine of leap years is not understood. The calculation is carried beyond the fourth years by only one or two.

2. The cause of the second tide given is the ordinary one. The explanation afforded, however, does not remove weighty objections to that theory.

3. The apparently retrograde motions of the planets is only once accounted for. In this instance the common but good illustration of a circular race-course was given. Some stated that they resulted from the difference in the (apparent) velocities of the planets as compared with that of the earth and of the fixed stars. The illustration given is that of a person sitting in a railway car, who is erroneously stated to see everything apparently retrograding. Between the two things there is no analogy whatever.

GAELIC.

In reviewing the paper in Gaelic, due attention has been paid to your Lordships' instruction, that "*as very high marks are given for proficiency in Gaelic, my Lords trust that great care will be taken, in reviewing the papers on this subject, not to give good marks to any exercises that do not evince a thorough knowledge of the language.*" Thirty-three in all have worked this paper; of these *one* has gained the mark of *very good; three* of *very fair; five* of *fair*. The rest vary downwards to *pretty fair*, *moderate*, and *very moderate*. The great defects in Gaelic exercises arise from very general inattention to the nature of the idiomatic differences between English and Gaelic, and the extensive and easy applicability of the same general grammar to both. It is only a thorough knowledge of the principles of the language that can give a teacher any great advantage over one who does not know it at all, in teaching English to Gaelic-speaking children.

LATIN.

I am disappointed in the Latin exercises, both prose and verse. The candidates who took up these papers may be divided into two classes. Those of the one class evinced a fair general acquaintance with the construction of the language, but seem not to have exercised themselves in translating *ad aperturam*, and without any aid from the dictionary. Those of the other class, generally the younger men, made a paraphrastic dash at the meaning; but, not resting on any grammatical accuracy, they have generally missed it. Their parsing was sometimes fair, but the failures to discern the syntax were very great.

SPELLING.

In concluding this part of the report I may remark that errors in orthography have been much more frequent in the composition of the papers than might have been expected, or can possibly be referred to mere nervous anxiety even in the case of the female candidates. In the papers of the latter we have for example "*deciples, desiples, desciples*, and *diciples, resurection, ressurection, fortold*, and *Danial in the den of Lyons.*" The names of *Ananias* and *Sapphira* were not both right once in twenty times; while, not confined to the female candidates, we have *guttarals, begining, pronounciation, puting, ommits, occured, grevious*, and *angle* (for angel) &c. &c. There is also a perceptible difference in the proportion of such errors in the papers from the different training schools.

The following Table of results is confined to candidates from my own district:—

V. Pupil-Teachers.

In a former report I had occasion to state that the solidity of the attainments of the pupil-teachers was generally very satisfactory, and had, in many cases, exceeded my expectations. This statement has been justified by the high place among their class-fellows usually taken by such of them as go to the university. Last year eight competitors for a valuable prize included two who had been pupil-teachers and Queen's scholars. The first trial cut off the other six, leaving these two to divide the prize after three further competitive trials. In teaching, it was to be expected that their imperfections should, in the first instance, be more especially the two which I have noticed in the beginning of this report. For a considerable time, when an error is committed, the only resource of many is the direct correction of it; and their failure to secure individual attention throughout the class continues for some time, and is always apparent in the attempts that are made, often without practice, to give a gallery lesson, as required at the close of the fifth year.

I have the honor to be, &c.

Ed. Woodford.

To the Right Honorable
The Lords of the Committee of Council on Education.

† Exclusive of Government grants.

GENERAL REPORT, *for the Year* 1856, *by Her Majesty's Inspector of Schools*, JOHN GORDON, Esq., *on the Schools in connexion with the* CHURCH OF SCOTLAND *inspected by him in the* WEST *of* SCOTLAND.

MY LORDS, Edinburgh, December 1856.

Fulfilment of conditions of aid from Parliamentary Grant.

THE great object of the yearly reports of inspection is to evince the effect of the public aid upon the schools that receive it; but it has not been your Lordships' wish that this should be their sole object. Before the public aid was granted, it had been seen that aid was needed to the school that sought it, and that aid was merited by fulfilment of the usual conditions. But, as neither the need nor the merit continue unchangeably, it is fit they should be, from time to time, the subject of attention as much as any other matter embraced in the reports. A very few words, however, will comprise all that it is necessary to say on these points at present. No aided school within the bounds assigned to my inspection has ceased, within the last year, to maintain its title to assistance upon the usual grounds, first, of a sufficiency in the amount of the attendance as well as in the proportion of the pupils drawn from the labouring population, and next of an insufficiency in the unaided resources of the school to secure its proper maintenance. The need of aid may not always be in the same degree in which it had existed at the first; but, in all cases, it continues in a degree which your Lordships have deemed sufficient. When the merit of the school is mentioned, the reference is made mainly to the matter and the style of the instruction; in which respects, there has been no such failure in any of the aided schools, during the last year, as to deprive them of the conditioned aid, whether in the form of augmentation or of apprenticeships. In a few instances, indeed, there has been cause for some dissatisfaction, the school having manifestly declined in efficiency, since the time of the last inspection. On the other hand, the great body of the schools profit by the aid which they receive, more or less apparently. Many are, distinctly by this means, maintained in the same commendable state in which they were, when aid was first granted,—while others have improved in a remarkable manner, within the last twelve months. Among the latter class, besides the general influence of the aid, there seem to have been some special occasions of improvement, such as the moral and intellectual progress which has, in the meantime, been taking place in the master himself, through the admonition, blame, or praise that chanced to have been expressed

to him before, or the removal of some obstacle to success in the circumstances of his situation, or, what is better, the continued pressure of that obstacle giving at length the energy to surmount it. Each of these occasions of improvement has been distinctly traceable in its influence upon one or other of the teachers during the last twelve months, so as very forcibly to suggest the remark, that, the state of schools aided and unaided is sufficiently variable, from time to time, to render annual inspection indispensable. It is not, however, the influence of circumstances affecting the teachers individually, but the direct and immediate effect of the public aid, that chiefly requires attention now.

Extent of aid.

I.—The last year's inspection extended to all the aided schools of the district and to some unaided; the whole of which are classed in the following table:—

	Receiving Augmentation only.	Augmentation and Apprentices.	Apprentices only.	Building Grants.	Book Grants.	Simple Inspection.
Parochial - -	5	18	19	1	16	20
Burgh - -	—	4	5	—	2	1
Subscription - -	12	37	16	1	15	20
Privately endowed -	1	1	1	—	4	5
Assembly and Society	6	10	2	—	2	8
Adventure - -	—	—	—	—	—	1
	24	70	43	2	39	55

The unaided schools were inspected either at the Managers' request or with their cordial concurrence; the occasion was generally some interval in the pressure of other duties; and the inducement was either the hope of benefiting the school, or the desire to obtain a view of the state of education generally in the district, from what might be regarded as specimens of its ordinary character. Your Lordships have approved, and, I think, have encouraged, the occasional inspection of unaided schools, for this, perhaps, among other reasons, that a knowledge of what the unaided school is, helps to a proper judgment of what the aided ought to be. The unaided schools that have thus been inspected are, with scarcely an exception, such as present strong claims to aid on the score of need. Of how many more that have not been inspected or aided may the same thing be said? The question does not admit of any very explicit answer,—for it suggests a reference to the total number of schools in the district,—a particular which has not been very well ascertained. But the following statement

approaches, perhaps, as near to accuracy as any that can be offered.

—	Total Number.	Number annually aided.	Proportion of the annually aided to the unaided.
Parochial Schools - -	414	42	10 per cent.
Non-parochial Schools -	1,400*	210	15 per cent.

The proportion of aided cases here exhibited is probably not less in this district than throughout the rest of Scotland. At the same time, there is reason to believe that the need of aid is so great, for a very large proportion of the unaided, that, if represented, it would at once receive your Lordships' acknowledgment. Of this in the sequel; in the meantime it is observed—

1. That in many instances, more especially of parish schools, application for aid from the Parliamentary grants has been delayed, until it should appear whether the late educational measures submitted to Parliament should issue in affording the desired assistance in another form.

2. The whole class of Adventure schools has, till lately, been inadmissible to the benefit of the Parliamentary grants, by reason of the impossibility, in their case, of fulfilling the pecuniary conditions of augmentation; and also by the want of a local school management, and the consequent want of an authorized local correspondent. These difficulties may now be overcome; for your Lordships have declared that, "if any presbytery of the bounds or other local body presents the case of a particular school (of that description) for a decision upon its admissibility," the merits of the application "will be considered in conformity with the Minutes;"† and again, the Adventure schools may be supposed to present a strong claim, oftener than usual, to be considered as self-supporting, that is, to be exempted from the common requirement of voluntary subscription towards salary. The knowledge of these arrangements is not yet very general among the schools of this class, but it seems likely, as it spreads, to give a considerably greater range to the application of the grants. It is certain there is no class of schools in the country to which the public aid is so much required.

3. The Grants appear to have been applied, during the last year, less in the *origination* of new schools than in providing for the better support and the greater efficiency of such as

* Education Census of 1851, &c.

† Letter from Mr. Lingen to Mr. Gordon, dated 31 January 1856.

have been already supplied from other sources; and the fact is remarkable as showing how well the administration of the grants accords with what is generally understood to be the particular form of the necessity throughout Scotland. What is wanted seems to be, not so much any great accession to the number of the schools, as a more real, vital, availing character in the instruction which many of the existing schools afford. This last being the great object of the annual grants, it is in that direction chiefly that the effect of them must be expected to appear.

Effects of aid:

II. One effect of the public aid appears to have been to improve in some degree the attendance at the schools that have received it. So very general, and so well known, is the habit of short and irregular attendance, that to exemplify the fact would be superfluous, if the evil were likely to be otherwise removed than by having it constantly in view. One or two instances may be now mentioned. In many parishes of the counties of Dumfries, Kirkcudbright, and Wigtown, it appears that one-half of the school-going children are not at school for more than six months in the year.* In Ayrshire the female school at Beith receives, in the course of twelve months, eighty new pupils, and parts with about as many. In the same county, "at the Eglinton Iron Work School twenty-five children, on an average, enter each month, who had never once been in school during the month preceding."† The Sessional School of St. John's, Glasgow, which enrolled 1,200 pupils in the course of the last six years, has never had, at one time, more than 170 present. At twelve of the schools, lately visited in Argyleshire, the attendance did not amount to twenty for each during the summer months. Other instances of much of the same sort might be produced from many parts of the district. Among the attempts that have been made locally to improve the school attendance, or to give a remedy, where it cannot be improved, some may be mentioned. *Evening* schools have been established, in a few instances, at some stations where the greatest desertion of the day schools has taken place; one of these at Paisley, in connexion with the Neilson Institution, attended "by forty-five pupils, male and female, all above sixteen years of age,—all employed in Public Works throughout the day—one thirty years of age, and several twenty, who are now getting lessons in the alphabet."‡ The Evening school for adults has its counterpart in the Infant school, of which there are six among the aided of this district. It was partly in the

Attendance at school.

* Appendix to Report General Assembly's Education Committee, 1853.
† Letter from Teacher of Eglinton Iron Works School.
‡ Minute dated 1 March 1855, in Minute of 1854–5, page 109.

view of those who set up schools of this class, that the instruction might be had there early, which was unlikely from the custom of short attendance to be had anywhere else, at a later date. The teacher of New St. Matthew's School, Glasgow, is assured that his pupils would be few, if he did not visit unnecessary absence with dismissal. "Were it not," says the teacher at Eglinton Iron Works, "that I spend from three to five hours weekly in visiting families, the attendance would be much more irregular." The Sessional school of St. John's, Glasgow, is attended by a very poor class of children; but the managers, to induce them to attend better, by a good example, have opened this school to other children from a class of people presumed to understand better, and to set more value upon the advantages of the school. In another way, the influence of example is tried at Pollockshaw's Poor School, where a portion of the pupils are pauper children, whose attendance is enforced,—not on their own account only, but in the view of inducing the same regularity in that other portion of the school which consists, not of pauper, but of very poor children. Each of these expedients has somewhat of the desired effect. How far, then, and in what manner does the same effect appear to be produced by the operation of the public aid? 1st. It sometimes happens that, in a district where schools are ill-attended, there is one that forms in that respect a striking exception. The local circumstances of that school are the same as those of all the rest; the sole, manifest cause of its superior success is, that it chances to be in the charge of a spirited and able teacher. Examples of this solitary excellence, and of the effect here ascribed to it, may be seen at Breakish, Tormore, and Cumlodden. The best teachers, indeed, are ever found to have the best attended schools; and, in this way, the public aid given to none but to teachers of some merit, has a certain good and visible influence on school attendance. 2nd. The same thing results from the employment of pupil-teachers under the Minutes, whose regular attendance acts as an example,—the more likely to be taken as they were themselves so lately in the rank of common pupils. Still more, the strictness of the rules under which they act as pupil-teachers tends to discountenance and to correct that spirit of remissness, from which the custom of unnecessary absence in a great degree proceeds. Except in these instances, the public aid has no very perceptible, at least no very direct, effect of the sort in question. The natural, and, on the whole, the best way of increasing the attractions of the school is to render the instruction, in matter and in manner, as interesting as possible to the pupil; for, in the simple

fact of that interest, even on the child's part, the parent, always cognizant of the fact, finds a sufficient recommendation of the school. Now, as every branch of instruction interests in the hands of an able master, it follows that the well taught school is ever well attended. But there is one kind of instruction, in itself, peculiarly fitted to interest the pupil—what is called industrial instruction. For this reason, the Female school of industry is commonly well attended; and the example is apt to be taken by the mixed school, with which it stands connected. With the increase then of female schools, now going on extensively, may not the general habit of school attendance be expected to improve. It is less easy to introduce into boys' schools any suitable instruction of the industrial kind,—that is, in the principles of knowledge applicable to the trades or handicrafts in which they may afterwards be engaged. But, supposing the instruction of this sort to be reserved for evening classes, its success could hardly fail to tell on the attendance at the day school, with which these evening classes might be but locally connected.

Education and Instruction;

III. The terms "education" and "instruction" are often placed together to mark the difference between them,—the one signifying the discipline, by habitual exercise, of the active and moral powers,—the other only assisting to promote that object by the communication of suitable knowledge. In practice they are inseparable; since, by educating we instruct, and by instructing we educate. But, in idea, they are distinguishable as they are distinguished now; and in each respect it seems proper to notice, here, what the merits of the aided schools are—more especially as, apart from the subjects of instruction, your Lordships have sought in the schedule of Inspectors' Report, if I mistake not, an account of what is strictly *education*, under the head of "discipline."

physical;

(1.) The same schedule points, in the first instance, to that description of education or instruction called physical; for it is seemingly in that relation that so much importance is attached to the "playground" which every aided school is expected to possess. Of physical education in the school-room there is none or little; and the playground is either insufficient or wanting to a considerable number; probably to a third part of all the aided schools. At the same time, in the absence of any rule or of much oversight, the exercises of the playground scarcely admit of being considered as of the nature of education. So that, on the whole, *education* of this kind scarcely goes to an appreciable extent. And *instruction* of this kind is so extremely rare and limited that it is difficult to recal an instance worthy of being mentioned.

Anything, indeed, like regular lessons on the laws of health, or on any select portions of human physiology does not occur. Might not more matter of that description find a place in some of the reading lesson-books,—though it should be at the expense of other parts of natural science which are there in great abundance, and certainly with no advantage in respect of their comparative importance? "Si causæ corporalium motionum noscendæ nobis essent, nullas magis nosse quam nostræ valetudinis deberemus." In the meantime, it is observed that these subjects are implicitly recommended to attention in the paper on "domestic economy," lately laid before the female candidates for certificate.

industrial; (2.) The *education* that takes this name is chiefly given in female schools, and chiefly consists of needlework, always plain, but for the most part also ornamental. The aided female schools are forty in number. Aided or not, they are far too few throughout the country; but, once set on foot, they are much frequented, and even sought with avidity,—as may be seen in one lately established among a hand-loom weaving population in Ayrshire. Among many pupils this school is attended, during the whole day, by about twenty upwards of fourteen years of age. A remarkable promise of the greater spread of such schools may be seen at present in the Normal seminaries of the Established Church at Edinburgh and Glasgow; while these are attended by no more than 7 unaided male students, the female students on that footing are no less than 107 in number. *Education* of the kind in question is very rarely given to male pupils, and only in the following instances:—At two schools in Skye, during the spring and summer months, a few boys are occupied in the simpler operations of tillage. Some share in garden cultivation occupies a few at Corpach and Inverary. Shoemaking is practised at the Reformatory school of Kilmarnock. Nothing more of this nature seems to have been anywhere attempted. *Instruction* bearing specially upon some branch of industry is rather more frequent. Johnstone's Agricultural Catechism is much used in the schools of Skye before mentioned. Lessons in geology and mineralogy are given at the mining stations of Leadhills and Dundyran. Mine surveying, engineer drawing, and the principles of mechanics are taught with great success at Jervistown to a class of young men regularly employed as common workmen in the mines. Drawing is much cultivated at Dumbarton and Dalmuir by pupils likely to be afterwards engaged in the manufactures of the neighbourhood. But, perhaps, nothing in this way is so full of promise as the instruction in drawing, chemistry, and botany given at the

Neilson Institution of Paisley, with a view to qualify for the trades of that place,—the managers having not failed to avail themselves of the suggestions on this subject which they had the honor to receive from your Lordships. It is proper to remark that the industrial instruction at Jervistown is given after the usual school hours, and in the evening. Everywhere, the advantage of evening hours for this purpose is very obvious; for it is then, that the instruction can be most available to the class of pupils for whom it is expressly intended, and who will chiefly desire to obtain it—to those who have already left school and entered upon the trade or occupation, into the principles of which a liberal insight is offered. Special instruction seems to take its place properly in schools central to a district, and designated to that purpose only; but not more properly than it may do in evening schools at any station where special instruction may be required; and, according as such instruction may be valued, it appears to me that evening schools of this kind merit your Lordships' special encouragement.

(3.) In every school *education* of a moral kind is given, if moral; not expressly, at least in some implicit manner; it is involved in the use of certain methods of tuition and certain forms of school management; and this so plainly that the moral import and intention of such forms and methods needs scarcely to be to be explained. Some of them, however, may be noticed.

(*a.*) In many instances the school registers have remained imperfect during the last year; but generally the necessary improvement in this respect appears to be in progress. Hitherto, their chief defect has been in the want of any record of the daily attendance; whereas, the daily notation of attendance tends materially to promote its regularity. With this matter then, of the school registers, the remark may be connected, that, the habit of daily punctual resort to the school is, not merely favourable or necessary to progress in the given task or study, but that it is, in itself, an excellent moral habit. Adverting to what was before said of irregular attendance, it is proper to observe here, on the other hand, that this fault does not appear, in a noticeable degree, at a considerable number of the aided schools,—not merely such as, in the large towns, are frequented by children who are not of a poor class, but in such places as Kilwinning and Kilmaurs. The Poor's School of Pollockshaws has been already mentioned as an instance of very regular attendance; to which circumstance, in a great measure, the managers ascribe the fact that "not above three instances of juvenile crime have occurred in the whole district since the school was established, the case having been pre-

viously very different." It is observed that, in some schools, the summer attendance falls much below the amount required to meet the condition of the annual aid which they are receiving. In such cases, perhaps, a certificate should be produced, by the managers, that the decline of attendance is from causes beyond the master's control.

(*b.*) Of the 201 schools inspected a very few have been reported as at fault on the score of good order, obedience, and industry; the effect of which, is not simply to hinder progress in the lessons, but to prevent the moral training, which is of still more consequence. "Many," says a teacher, "unfortunately never learn at school anything of the order or obedience which they learn nowhere else, and which would be so beneficial to them in after life." It is true that the habit of obeying the schoolmaster's rule prepares and forms the disposition to obey the rule that proceeds from any higher, even from the highest, source. It is remarkable how much the pupil-teachers, everywhere contribute to the better maintenance of discipline on the points referred to.

(*c.*) Sometimes this obedience is given under circumstances that impart to it not a little of the character of voluntary effort; this is where exercises are prepared at home, as well and in such manner as the pupil, unaided and uncompelled, may be willing and able to prepare them. The practice has the merit of throwing the pupil much upon his own will, his own thoughts, and his own invention. It is by no means uncommon, and nowhere better done than at Househill, Newton Ayr, St. Matthew's, St. Enoch's, Glasgow, and East Kilbride.

(*d.*) In the foregoing instance the moral training takes place, while another and different thing is intended. So it is in other instances, among which may be noticed that part of school organization which consists of the arrangement of pupils into classes. The object of this is to facilitate the process of instruction; but one effect of it is to operate upon the moral training of the pupil, for the government of a class is essentially a moral government, or it is no government at all. The class supplies in its own way occasions of duty, discipline, and struggle, which are the very type of those that shall turn up in the future progress of life. It is on this account that a very few particulars on the common modes of classification may be now mentioned. It happens seldom that the same pupils are classed together for various branches of instruction. Yet the effort of the teachers pretty generally is to bring this to pass, as far as circumstances will allow; and they are right, for it is obvious that the reunion of the same individuals in various studies enhances any advantage that fellowship gives to their training,

either moral or intellectual. The classes are sometimes too many, from the facility of division allowed by an excessive use of monitors. And the classes are sometimes too few. It is strange that, while a school exhibits seven or eight distinct groups for English reading, there should be but one, or at most two, for religious instruction. Yet it is not strange, considering how naturally this proceeds from the very frequent want of anything like a graduated series of lessons on this subject. There is no branch on which the classification is so often unsatisfactory as that of arithmetic, in which, indeed, it is sometimes entirely wanting. In one or two schools, it has been refused to mark the degrees of merit by the assignment of places in the class, or in any other manner, from a notion, mainly, that such distinctions supply wrong motives to exertion.

(*e.*) Commonly, however, merit is marked, not only by class places, but, by prizes of books, medals, or other tangible things; the intention being, not simply to reward, but, to encourage. It would seem that encouragement may also be produced, and exactly where encouragement is most wanted, by the opposite practice of withholding all rewards. The very intelligent master of the flourishing school of St. James', Glasgow, states:—

"By not giving material rewards I have no dolts in my classes, such as I used to have when rewards were given, and when some in every class would sink like lead to the bottom. To be sure, there are dull boys as before, but then they do not lose heart in the same way, and I can even bring them up by degrees with their brighter companions."

The description of the reward given at the Pollockshaws Poor's School is unusual:—

"At the end of the year, the boy who has been most distinguished by good conduct and proficiency is transferred to the parish school to receive gratis all the branches which are taught there; and when his time there is ended the managers make it their care to provide some reputable employment for him."*

In like manner, at the beginning of each session, the six boys who have been most distinguished at the Neilson Institution, among those who have the benefit of the charity, are rewarded by advancement to the highest division of the school, where they receive free instruction in all the superior branches. This is, in substance, the same plan which has been thus noticed and commended by Professor Dugald Stewart, as "a very beautiful idea suggested by the Committee of the first Virginian Assembly":—

"Every county was to be divided into small districts; in each of them a school was to be established for reading, writing, and arithmetic; every

* Report on Pollockshaws Poor's School.

person to be entitled to send his children to school for three years gratis; these schools to be under the superintendence of a visitor, who should annually choose a boy of the more promising genius, to whom it should be determined to give further education, and to send him forward to one of those higher schools, of which twenty were to be erected in different parts, for teaching, gratis, Latin and the higher branches of arithmetic. Out of the boys thus sent forward in a year, trial was to be made for one or two years, and one boy should be continued six years longer. By these means," says the Report, "twenty boys of the most promising talents will be raked annually from the rubbish."*

In other ways moral education is ever going on in every school; but, without dwelling longer on this point, it is proper now to observe how much aid education of this kind derives from the *instruction* which is peculiarly meant and fitted to promote it.

religious; No programme of subjects to be taught in any school announces anything under the name of *moral instruction*. Class-books in graduated series do not exist for that, as for other branches. It is unmentioned in the schedule on which the state of a school is reported to your Lordships. But the good and common reason for the omission in all such cases is that moral instruction is understood, from its very nature, to be included in religious; which last has its place in every school and in every school report, while everywhere it is taught from books the best adapted to the purpose. When the moral instruction is thus identified with the religious, the important result takes place that the moral truth, the moral sentiment, the moral obligation, are presented to the pupil's mind with the sanction and the sanctity of religion; and so it happens that, when a master finds occasion to adduce a moral lesson, he deems it incomplete without a reference to the law which is still more properly divine. Everywhere the school-visitor may find examples of that referring practice. The special report of a school describes the religious instruction as given from the Holy Scriptures and the Catechism; and often the same numbers and the same individuals are returned as instructed from both. It may be supposed, therefore, that they began to learn the catechism much about the same time when they began to read the Bible. This is the practice of a teacher second to none in experience and ability, and who speaks of it thus:—

"We commence both at the same time, because I find that when the catechism is put off to a later period, it cannot be acquired so easily nor so correctly, the mind of the pupil being then engaged otherwise; and at this time the matter being well committed to the memory, we have the remainder of the time when the boy is at school, for fixing and impressing it upon his mind as a complete digest of Christian principle and Christian practice."

* Dugald Stewart's "Political Economy."
